# A.I. SIRE SUMMARY

By PETER W. SPIKE, Extension Dairy Specialist

This report contains the latest USDA sire summary information for nearly 250 sires which were available to Michigan dairymen through the four stud barns as of October 1969. There is a summary for every sire which had 10 daughters reported to the USDA with production.

Sires are ranked by the superiority of their daughters to herdmates as expressed by the Predicted Difference value for milk. This is the best estimate of the inheritance each sire passes on to his daughters and reflects their ability to produce under the wide range of conditions found in A.I. herd.

Dairymen should use sires with the higher predicted differences that have acceptable levels of breeding efficiency and type. Each dairyman must decide what his own goals are and emphasize them accordingly through sire selection.

## Explanation of Headings

<u>Registration</u>	Identification of the sire.
<u>Number Name</u>	
<u>% Inc.</u>	(Percent Incomplete)--Percentage of two-year-old daughters that died or were sold before milking 305 days.
<u>No. Dau.</u>	Number of daughters with production records.
<u>No. Herds</u>	Number of herds in which records were made.
<u>% Rpt</u>	(Percent Repeatability)--Repeatability can range from 0 to 100. It is an index value which expresses the completeness of information on each sire and also indicates the reliability of these past and present daughters in predicting future daughters' production.
<u>Pred. Diff.</u>	(Predicted Difference)--The amount of milk or fat that future daughters of this sire are expected to differ from their herdmates, under A.I. conditions, based on past and present daughters' production. Regardless of repeatability, this is the best estimate of the true transmitting ability for each sire obtainable from present information.
<u>Milk Fat</u>	
<u>\$ Value</u>	A way of expressing the predicted differences for milk and fat in terms of today's milk market. The dollar value is the gross value of milk that these daughters would return above (or below) their herdmates, if they all were mature cows.
<u>Date</u>	Date that USDA summary was calculated e.g., 5/69 = May 1969.
<u>Codes</u>	All sires listed are live bulls in regular service for the stud, unless coded "SA"--Dead, but semen available.
