Whole Number 571
A Remedy for Cut Worms

Cut worms are the caterpillars of night-flying moths. Most of them feed on crops of grasses and tender plants, such as clover, grass, lettuce, and celery. Only a few species are found in the wild. They are pests, causing damage to plants and reducing the yield. The control of cutworms is essential to ensure good crop yields.

A New Form in Fairs

The present grounds of the Kent and King Granges, and the grounds of the County Agricultural Society, are the most commodious and at an equal distance from one another. The premium list is liberal, and will be accompanied with special cars, so as to be attractive to the farmers and others who are usually represented at autumn fairs. The buildings are models of neatness and elegance. The stretch of mile track has been kept in the best possible condition, and will admit of sea-going vessels of all sizes. A few more basins, and the way is opened for the admission of more. As the admission is to be free, there is no expense to the visitor, and no charge to the exhibitor. A plentiful supply of hay, straw, and corn, either for sale or for barter, is provided at a very moderate price.

The Grand Stand will be free of charge to all, and no additional charge for arrangements will be made. The arrangement is designed to keep up a constant supply of stock, and to make arrangements for the supply of all kinds of stock. It is to be mentioned that the stand is at the turnpike and a great number of people will be expected. The stand will also be of service to the farmers, and will prove very valuable to the exhibitors.

We want the largest entry ever made in the wool trade, and if our friends will help us to get a great number, the pledge will return to added inducements and facilities for next year. James Cox, Secretary, Grand Rapids, Mich.

Bliss the flowers and gardens, their good work in the spring and the early part of summer. But as the weather becomes warmer, and the ground begins to dry, the work of the gardener is more difficult. The flowers need water and care, and the garden requires a great deal of attention. The gardener must be prepared to do the work, and to do it well.

The question is asked: Shall every one with a good name and a good reputation have the privilege of taking part in the proceedings? This is a question to be answered by the custom of the locality. No reason why the tars may not be enclosed within the fleeces. If the wool is removed from the sheep in early spring or in autumn, the fleeces, if full of the wool, are apt to be found as neatly as the custom of the locality. It is rare for the sheep to have a fleece in such a state of perfect condition as this, and a great number of people will be expected. The stand is at the turnpike and a great number of people will be expected. The stand will also be of service to the farmers, and will prove very valuable to the exhibitors.
