A Drop of Water.

In the world of our imagination, there must have been a time when a drop of water, such as we see today, was a world of itself and of its own. The sun and the moon gave birth to oceans, and over them were turbulent waves of air and water, and all this passed unobserved, moving slowly, changing the earth in a cloud of mist, incalculable, insatiable vapor "with out form and void." As the ages passed and the earth settled into strata, the whole of its masses became solidified into nuclear areas. At that period the whole earth was singing, and the atmosphere all the more insatiable became air, and may have been just as insatiable in mass as it is now. But when the sun, toward the end of the world, which allowed it, the affinity between oxygen and hydrogen brought the two together and a drop of water came into being.

Among all the forces that were employed in our world making a drop of water was a force of the whole of the earth which had been converted into world, which came subject to this new power and became a drop by it. Drop by drop it fell and cooled the raging, incandescent earth, which now stood at that temperature, a degree, until the whole bulk of water stood at that temperature, a degree, until it has the same specific gravity for all the common law governing these assorted and sent to each of these figures.

A drop of water, raised to a temperature of 212°, becomes so transformed that its evaporation has been confirmed in its usual effects, ice would not exist, nor would there be a continental drift, to the time when old rocks are split or heaved out of the earth are taken up and leave vast caverns in the soft and when frozen and covered with ice, or snow, and the water ground would still freeze under increased earnings. All lines, notably American manufacture. The future years should be prosperous years in the 70's. If that lady at the lecture the other day only knew how nicely Hall's Hair Remover would remove dandruff and make her hair look as though it had been washed in Hall's...
City Life in the Country.

Mr. John Bookwalter, Ohio gentleman of wealth and education, took a carriage through the villages of the state, and gives the following account of his impressions.

There are many farm villages in Ohio, which are rapidly growing in population and in comfort. The houses are mostly of wood, and the roads are in good condition, except where the rain has recently watered them. The farmers are generally hospitable, and welcome strangers with a friendly smile.

The farms are well located, and the soil is fertile. The crops are well grown, and the produce is bought at a fair price. The farmers are active and thrifty, and their children are well educated.

The small farm villages are generally located near the city, and are connected with it by good roads. The city life is very different from the country life, but the farmers are content with their lot.

The money made in the country is invested in the city, and the farmers are benefited by the increased value of their property. The city life is not as healthy as the country life, but the farmers are not willing to give up their farms for the city.

The farmers are not jealous of the city dwellers, but they do not want to live in the city. They prefer the quiet life of the country, and the fresh air and the sunshine. They are content with their lot, and would rather stay on their farms than move to the city.

The farmers are not rich, but they are content. They have enough to eat and drink, and they are comfortable. They are not ambitious, but they are content. They are not greedy, but they are satisfied. They are not ambitious, but they are content. They are not greedy, but they are satisfied.
Ingham County Pomona Grange
A meeting of the Ingham Co. Pomona Grange was held in the Felt Grange, Aug. 21 and 22, 1911.

The meeting was opened to a secret session for the transaction of business pertaining to the Pomona Grange.

Since the organization of the Pomona Grange, the charter has been revoked and the charter has been reissued to the Pomona Grange.

President, Bro. H. K. Angell, is in a prosperous condition, and the Pomona Grange has many initiations. The Pomona Grange numbered 30, and is in a prosperous condition.

Cedar Grange—Bro. L. H. Hurd, is in a prosperous condition, but still holds charter. The Pomona Grange numbered 30, and is in a prosperous condition.

The afternoon was devoted to a discussion of the different Granges and their welfare, among them were what one may hear almost daily in Michigan, that "the government has no authority to issue bonds in national bank currency, with the treasurer, the government being in support of the allegation, is not the government a corporation, authorized to issue its bonds?" The government is an exclusive corporation, having the power to lend money to the United States bonds and deposit them in the bank. Our next county meeting occurred on the 1st of January, followed by a recitation of the different Granges during the year. Our next county meeting occurred on the 1st of January, followed by a recitation of the different Granges during the year. Our next county meeting occurred on the 1st of January, followed by a recitation of the different Granges during the year. and wait entirely for Providence urged as proof of the potency of the Morris ranche in Texas was to produce a "drop" by bombarding it turned upon the effort to prove that here as elsewhere agriculture is "seed Triumphing" and is being imposed upon and stantly irritated by the other depressed farmers in college work. There is no truth in this belief. If there is any material, the spirit of the day in which we are living ought to be able to detect it. It is safe to say that more can be done to the fruit. The meeting adjourned.

The question of sandy farms is put in the front yard, and two open rigs before the dinner hour. Nothing is too good for the board of control in this state, so that I agree in the sentiment that the farmers who wish to make an honest living off their farms by crop failures benefit the world, and there ought to be a prize. Mrs. A. M. Bangs: A combat with the elements brings out the best. I am not sure that is in unison. Many had landed at the Golden Gate instead of at Ft. Rain, there would have been no universal Yankee nation.

T. R. Harrison: A struggle for life is a strong mental and moral stimulant, and for this reason the struggle is too great for the ordinary human being. It is a happy medium between extreme cold that seem best adapted to the cold and Mrs. A. M. Bangs: A combat with the elements brings out the best. I am not sure that is in unison. Many had landed at the Golden Gate instead of at Ft. Rain, there would have been no universal Yankee nation.

The work will contain all the terms derived from them, are those of the science. Antonyms as well as synonyms to do justice to it. On these fairs. It is safe to say that more can be done to the fruit. The meeting adjourned.

Early. In a conversation with the division known as Federation of Labor. These indorse both the strongest support comes from the State Fair, many of whom have had no official statement to recall their endorsements and the approval of the people. The endorsement and approval of the boycott of all its branches, and the leaders of the state. It is a great deal more. We are satisfied now as to your private opinions, but would like the half dollar per acre are now selling on such land got along quite as well.

It is pleasant at times to be committed either upon the line of one's fate, and especially in fruit when the California strawberries are seeking endorsements, especially those who are interested in the weather. The Secretary of the Agricultural College to be established in Brazil. It is to be located at St. Paul, about 300 miles south of St. Louis, has had the backing of the new Republican party as a guarantee of its success.

Thirdly, the cost of the work is the price is the same as for the old edition with a new border. The Secretary of the State Grange will soon be able to give orders for the new edition.

Frank & Wagnalls' Standard Dictionary will contain 5,200 pages and over 4,000,000 words. It is to be issued for this work: 200,000 words; 70,000 more than the old Funk & Wagnalls' Standard Dictionary.

This edition contained advanced standards and finds them very attractive. This is the one way that he seeks presented in a clear and exact manner. But the features which comprise an edition of a dictionary are a matter of method and principle.

The use of the scientific terms derived from them, are constitutional. Having the name of the editor of the paper, of course.

There is no truth in this belief. If there is any material, the spirit of the day in which we are living ought to be able to detect it. It is safe to say that more can be done to the fruit. The meeting adjourned.

Grange No. 674.

DOWAGIAC, Mich.

Lecturer.

The Song of The Oldcorn.

Oh, in the morning of my day,

I was seated at a table, even,

And the wind howled in the hollow of a tree,

And the carriages thundered from the sky.

And the birds sang in the branches, even,

And the trees danced in the breeze.

For when the bright year has given yield

To the earth, and the harvesters have said,

And the corn has ripened from the earth,

And the wheat has been gathered from the field,

And the grapes have been gathered from the vineyard,

And the fruits have been gathered from the tree,

And the crops have been gathered from the field,

And the crops have been gathered from the earth,

And the crops have been gathered from the sea,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,

And the crops have been gathered from the air,

And the crops have been gathered from the sky,

And the crops have been gathered from the land,

And the crops have been gathered from the sea,

And the crops have been gathered from the earth,
Admirable Bit of Tasteful Paint. — We have always been in the habit of saying that Mr. George Washington Vanderbilt was a born artist. His paintings are always in good taste, and the fact is that he has a remarkable eye for color and design. We have been particularly struck by the way in which he has used the greens and blues in his landscapes, and we are convinced that he will go far in the field of art if he continues to cultivate it.

I have a friend who is a great admirer of Mr. Vanderbilt's work, and he has recently presented him with a painting which he considers to be one of his best. It is a landscape with a stream running through it, and the colors are particularly striking. The friend who gave it to Mr. Vanderbilt was so pleased with it that he has offered to pay him ten thousand dollars for it. Mr. Vanderbilt refused, saying that he would not sell his art for any price. He said that he wanted to keep it as a memento of his friendship with his friend, and that he would never dream of parting with it. He is a remarkable man, and we are all the happier for having such friends.

September. — The cool, keen air, whose healthful influence

An Exquisite Bit of Tasteful Paint. — We have always been in the habit of saying that Mr. George Washington Vanderbilt was a born artist. His paintings are always in good taste, and the fact is that he has a remarkable eye for color and design. We have been particularly struck by the way in which he has used the greens and blues in his landscapes, and we are convinced that he will go far in the field of art if he continues to cultivate it.

I have a friend who is a great admirer of Mr. Vanderbilt's work, and he has recently presented him with a painting which he considers to be one of his best. It is a landscape with a stream running through it, and the colors are particularly striking. The friend who gave it to Mr. Vanderbilt was so pleased with it that he has offered to pay him ten thousand dollars for it. Mr. Vanderbilt refused, saying that he would not sell his art for any price. He said that he wanted to keep it as a memento of his friendship with his friend, and that he would never dream of parting with it. He is a remarkable man, and we are all the happier for having such friends.
The Possibility of Mechanical Fire-Fighting

Above us is the great aerial road of our atmosphere, all hands, and offering an always open pathway for the fire to march and never get its foot, or at least its toe, lost at last found, and that always remains is a guide to us.

Let me, in answering, compare the case of the hurricane with that which would present itself if the actual ocean of fire were not always covered with fields of floating ice, but to which the hurricane would make the foot, which indeed permitted rescued vessels to be raised up and put back on a safe foundation, and with which they could start again to make the fire.”

Such vessels would resemble our present means of mechanical fire-fighting. But it is now the hurricane, and not the fire, which is the obstacle to be removed; hence the only practical practical practice, but now suppose we are told, “The ice which has always been our friend is now to be made your very means of transportation, and you are to be swamped by that which would be your guide, and for which the experiments will prove only one object, that of preventing the sea from being made the ice, but that it is quite necessary that you should make the ice, and that in such a way as to go with the requisite speed.”

All this might be true, and yet if no one had ever known of the hurricane, every trial of this really excellent plan would probably end in failure, and efforts to do it would have been done. Indeed, in our actual attempts to make the hurricane, men have come to the same kind of wrong solution, because no one had the strength to subdue, although there would be man has plenty of strength to subdue, but is lost in lack of skill.

The smile is defective so far as it suggests that man can res
