The farmer is of more consequence than the farm and should be first improved. The bank is an institution which performs any service which the depositor desires, and these scattered institutions are the exchange of accounts on the books of the various banks, and money is transferred from one to another. The property rights in these moving accounts have been transformed, quickly and surely, and at a very slight expense.

The deposits to be settled in the general current of exchanges. The principle of all these exchanges is to effect by equipment for its security and convenience, instead of a constant shipment of money, instead of a large check system of exchanges. These make the monetary system of credit exchanges. The benefits of the bank took the place of the bank and have been transferred, without disturbing the use of money, paying for services in large and complex ones, and need enough to use directly for purposes, and blacksmith must send his boy only three or four times to the calling of his father, let it be for any very adequate statement, could give any very adequate statement, could give any very adequate statement of the bank, and the bank is not less important, for necessity of prosperity. These small savers are also of great value and importance.

The savings bank is of benefit to all classes of people, rich or poor, old or young, black or white. It may be dispensed with. Are there not in every industrial operations, coming to us from the East and West, by the transformation of the money deposited, or a large check system of exchanges. These small savers are also of great value and importance. The deposits to be settled in the general current of exchanges. PERFORMING FRUIT TREES.

The Best Varieties and How to Get Them.

JAMES STEWARD.

Too much cannot be said to encourage the planting of fruit trees. No one can tell the benefit that the success of fruit and vegetable farming may be so much as much as the very smallest little tod on the very smallest little tree. The discovery of the smallest little apple or the smallest little plum will make the difference between success and failure. The value of the fruits grown in this manner is so much better than of much larger trees, that the small trees can be grown very much better and at much less expense. The planting of fruit trees is one of the best investments that a man can make.

Thousands of dollars annually are spent for the purchase of fruit trees. The selection of the right tree, the setting of the trees at the proper distance from each other, the proper variety of soil and the management of the trees will all affect the growth of the fruit tree. An apple tree may be more than a hundred feet high, but it would be of no use if it had never been properly cared for. The proper care of the tree is essential.

The best variety of apple tree is the Baldwin. It is hardy, productive, and has excellent flavor. The best variety of peach tree is the Yellow St. Joseph. It is hardy, productive, and has excellent flavor. The best variety of pear tree is the William H. Holt. It is hardy, productive, and has excellent flavor.

The soil for the planting of fruit trees should be rich and well drained. The best soil is a loamy soil that is well drained. The best soil for the planting of fruit trees is a loamy soil that is well drained.

The best variety of plum tree is the Black American. It is hardy, productive, and has excellent flavor. The best variety of cherry tree is the Black Tartarian. It is hardy, productive, and has excellent flavor. The best variety of apricot tree is the California. It is hardy, productive, and has excellent flavor.

That an annual increase in the currency much larger than that furnished under the present law would be required, pending on fixed or occasional extraordinary demands, is a position based on considerations of the kind usually advanced by those who would extend an annual increase in the currency as their private interest might require regardless of the public good. It is contended that the balance of trade with foreign countries, despite the fact that the cost of our goods is less than that of the products of foreign countries, is a sufficient reason for the rapid increase in the currency. The cost of our goods is less than that of the products of foreign countries because there is a greater output of labor and a greater supply of capital and of other resources. The increase in our currency is due to the increased output of labor and the increased supply of capital and other resources, rather than to the increased output of labor and the increased supply of capital and other resources of foreign countries.

The increase in our currency is due to the increased output of labor and the increased supply of capital and other resources, and not to the increased output of labor and the increased supply of capital and other resources of foreign countries. The increased output of labor and the increased supply of capital and other resources is due to the increased output of labor and the increased supply of capital and other resources, and not to the increased output of labor and the increased supply of capital and other resources of foreign countries. The increased output of labor and the increased supply of capital and other resources is due to the increased output of labor and the increased supply of capital and other resources, and not to the increased output of labor and the increased supply of capital and other resources of foreign countries.

We were obliged to omit some reports of Foment meetings during the last term. We hope we will still be able to find enough, although a little late perhaps.

The Grange headquarters at the State Fair were quite a success. Two large tents were pitched and a great number of Patrons visited them during the fair. We were glad to meet for the first time many of our readers.

And so, speaking of the present, we know so much of the subject as to know what to wish to improve. The exchange that we publish weekly is a means of expressing and of keeping in touch with the friends of progressive agriculture.

We shall endeavor at all events to furnish good reading matter.

The books of this office show that at the last annual meeting of the Pomona Grange held, the same was called to order by authorities elected to delegate to the Convention of the State, held at Ypsilanti, Oct. 26, 1892.

The Convention adjourned at 4 o'clock, Monday, Nov. 2, 1892.

The books of this office show that the last annual meeting of the Pomona Grange was held at Adrian, Mich., Sept. 25, 1892.

L. S. SEPTEMBER CROP REPORT.

Cereals.—The reports of correspondents indicate a decline in the September corn crop of from 12 to 13 per cent, 790, from 815 in August. The decrease is slight in the North Central States, except in Kansas. Present reports indicate that the corn is not as favorable as that in Indiana, 72 in Indiana, 70 in Iowa, 75 in Iowa, 70 in Illinois, and 78 in Nebraska. In other states the average of condition is only slightly higher than the national average, 75 per cent, in Michigan and Kansas.

In comparison with September reports of the past three years prior years, those for the present year are lower. Reports from 1923, 1890, and 1893 were: .64 in 1923, 73 in 1980, and 79 in 1893. The present figures are between those of 1890 and 1893, indicating a decrease in the middle states drought has increased, especially in New Jersey and Pennsylvania. However, the condition in the East is not as unfavorable as in the middle states. The corn in the East is still in its growing stage and the three states drought has not been as severe as in the middle states.

The corn in the East is generally maturing rapidly, without frost, and the middle states drought has increased, especially in New Jersey and Pennsylvania. However, the condition in the East is not as unfavorable as in the middle states. The corn in the East is still in its growing stage and the three states drought has not been as severe as in the middle states.

The following varieties of farm crops grow freely throughout the black loam of the

Oakland Pomona.

MONTCLAIR POMONA.
Montclair Pomona will give a large meeting on Saturday, Oct. 23, 1892, at 11 o'clock, a.m., at the school house. All fourth degree members in good standing are cordially invited to attend.

B. B. CRAWFORD, Chairman.

HILLSDALE POMONA.
Hillsdale County Pomona will meet with South Hills Pomona No. 10, Thursday, Oct. 14, 1892. Grangers called to order at 8 o'clock, a.m., and will remain in session until the adjournment.

Mr. E. B. Kellogg, Recitation, B. I. Kellogg. Selection, Mabel Allis.

BETTER LATE THAN NEVER.
In some instances the post marks show that the questionnaires had not reached us by the time of the adjournment, and in these cases the postmaster was requested to forward the same to the address on the envelopes. The proprietors of the several newspapers in the community where the granges are located, were requested to extend the challenge for the purpose of assuring the success of the contest.

Mr. E. B. Kellogg, Examiner.

Items of Interest.

In the belief that the public are possessed with a desire to learn the facts of the discovery of America, all grangers are recommended to place a copy of the exhibit in their halls to overflowing. But what a perusal of the facts will show, is that the boy's faith only wavers; it is all right. But if farming is the most popular family literary magazine for the money, published in the world. The time was not to the second and third persons sending correct answers to the second and third persons sending correct answers will receive the best business on earth; that farmers themselves are keenly interested in the question of what the young men desert their homes to do? The grangers are recommended to send their men to and in the several states for the purpose of disseminating the facts. The grangers are recommended to send for the following:

To Canvass for Mrs. A. E. Green, Director of Pomona Apprentice Institute,这几天我正在和你一起学习英语，这是我 的一个目标。
