## Peace Corps Looks to MSU

By ARIEL MELCHOIR  
State News Staff Writer

MSU is being considered as a training center for Peace Corps candidates in secondary school teaching, Dean Homer D. Higbee of International Programs said Thursday.

"Although the program is in a preparatory stage, there is more than a 50-50 chance it will go through," he said.

Some of the candidates who would probably begin training here in late August or early September, were selected by a group made up of officials from MSU and Harvard University in Washington, D.C. Thursday.

BUT THE process of selecting more students to get the 130 trainees this university will handle is still in progress, he added.

The names of these candidates are chosen from a pool at Peace Corps office in Washington which contains the records of qualified students from colleges and universities throughout the U.S., he said.

"We are making every effort to choose people very care-

fully," he said. "So that the likelihood of failure is reduced."

The program which will last for two to three months will provide for 100 secondary school teachers for Nigeria, and 30 graduate students who will be assigned to the universities in Nsukka, Nigeria, he noted.

HIGBEE, who returned from Washington Wednesday night, had this to say in regard to the training program:

"This university is conscious of the complexity in such a program. I know that in our preparation we are going to do the best to train these people to cope with the cross-cultural aspects of their assignment."

THEY WILL get additional training in teaching skills," he related, so that they can effectively conduct the roles are assigned to.

This university currently conducts a Nigerian project, where faculty members teach at the University of Nigeria in Nsukka.

## 'Spirit' Performs To Large Crowd

By FRED BLACK  
State News Staff Writer

A pillow flew across the stage, a vase of flowers jumped from a table and a stool mysteriously jerked about, thus ringing down the curtain on the opening of "Blithe Spirit."

The Wednesday night performance of Noel Coward's bright farce marked the pre-

### No Classes Held Fourth of July

The Fourth of July, Tuesday, will be a holiday for MSU students and faculty but classes are scheduled as usual for Monday and Wednesday, July 3 and 5.

miere of the University Theatre's Summer Circle.

A near capacity crowd of 236 theatre patrons comfortably encircled the new arena stage in Demonstration Hall to enjoy the humorous and sometimes wierd antics of the actors.

BUGS ATTRACTED to the bright lights above the stage and the green canvas chairs provided for the comfort of the audience lent a leisurely "backyardish" effect to the presentation.

The beginning of the play was marked by the usual opening night jitters but the characters soon warmed to their roles. Thereafter, the play moved rapidly through the three acts.

Robert (Bud) Spangler, as the harrassed husband Charles Condomine, delighted the audience again and again with his ability to rise to a dramatic situation. Although he occasionally allowed himself to lapse out of character with a mischievous grin at the amusing antics of his fellow actors, his sure touch of comedy enabled him to get the most out of his role.

Kay Ingram gave a poised, convincing performance as Condomine's second wife, Ruth. Her confident stage presence never wavered and she did an excellent job in the outstanding first scene of the second act.

AS THE IMPISH, imprudent and long dead first Mrs. Condomine, Judith Nichols was splendid. Her precise timing and relaxed delivery was flawless.

In contrast to the other central characters who were properly English, the cockney spiritualist, Madame Arcati, came on strong.

She was played by Helen Shaw who literally threw herself into the role. She shouted, gestured and tumbled about the stage with effective abandon. Unfortunately, her rich cockney accent, evident in the first scene, faded as the play progressed.

In her enthusiasm for the part she stumbled on some of her lines but was generally competent to the obvious delight of the audience.

THE MINOR PARTS, Dr. Bradman, Mrs. Bradman and Edith, played by Ben Hickok, Ann Crow and Jeanne DeHaas respectively, were well done.

Miss DeHaas as the energetic maid Edith, was particularly effective. She was detached from the audience and consequently reacted convincingly to the situations she was involved in.

The entire presentation was run smoothly and it appears that summer stock will be an asset to the university campus.

## Red Cedar Huck Finns Discovered

University authorities squelched an attempt to establish a Red Cedar navy earlier this week when they recovered the nucleus of the fleet — an 18-foot water carnival raft.

Four aspiring East Lansing sailors, aged 13 and 14, were spotted painting the raft behind a fraternity house on Bogue St. by plumbing department employee Walter Pease.

Pease notified the Department of Public Safety and, upon investigation, they were told by the boys that the raft was found adrift — upstream from its Farm Lane bridge mooring.

No official action was taken and the raft was returned by the plumbing department which had borrowed it for use in transporting scaffolding across the river.

This was the second time the raft had "drifted" upstream.

## Hotter Weather Headed Our Way

Today's forecast calls for partly cloudy skies, continued heat and humidity and scattered thunder showers beginning in the afternoon or evening.

Saturday will be fair and warmer.

The five-day extended forecast which will include the Fourth of July has not yet been compiled according to the U.S. Weather Bureau.

## Provost's Schedule Is Busy

Provost Paul A. Miller was able to get a few hours at his desk in the Administration building Thursday morning, as he stopped on campus in the midst of a busy conference schedule.

Miller has spent the last week in Washington, D.C., attending a meeting of the Commission on Education for Women, of the American Council on Education.

While in Washington Miller also attended a two-day panel meeting of the President's Ad Hoc Committee on Latin American Education.

Thursday afternoon Miller left for Fort Collins, Colo., to attend a national seminar for land grant administrators. The topic of the seminar is "Implications of Agricultural Adjustments for Land Grant Administrators."

## Failure Unavoidable

By HANK BERNSTEIN  
State News Staff Writer

MSU's Highway Traffic Safety Center ceases to exist today.

President John A. Hannah, discussing the closing of the center, said:

"Our decision in this, as well as in other areas of program terminations and curtailments, was forced upon us as an economic necessity.

"It is with personal regret that this decision had to be made, for my own conviction concerning this program and the need for more centers like it in other state universities has often been expressed."

The university refuses to take full blame for the ending of the center, and in this case, the unhappy prospect of sending four people job hunting.

"I am particularly regretful," Hannah said, "that when our financial difficulties began three years ago, at which time the closing of the center was recommended by the legislature, neither the automotive interests of this state nor any other groups which profess interest or enthusiasm for what we are trying to do came to our support.

"We cannot operate any program, regardless of its value, on lip-service," he added.

Gordon H. Sheehe, director of the center has been transferred to the Continuing Education Service of the university, as of today.

Sheehe, commenting on the

closing of the center said:

"It is ironic that the economic losses of a single holiday's traffic toll in Michigan represents more money than that needed to maintain the Highway Traffic Safety Center for a decade.

Sheehe could have used other words, equally ironic and equally grim. Using the National Safety Council figures, the MSU center is not even worth the saving of two lives.

The National Safety Council estimates that each fatality has a direct economic cost of \$165,000. At this rate, two fatalities would cost more than the center's budget for the last year, \$329,000.

Most center staff members have been transferred to other departments of the university, in most cases the areas from which they came originally—police administration, continuing education, psychology and teacher education.

The center's entire stenographic staff has been reassigned within the university.

A five-point program was carried on by the center. The program included an extensive driver education program, in-service training for people already in the traffic field, field assistance to needy local agencies, special traffic research and information services.

Of the five programs, only the public education (information services) area has been dropped completely. The other programs have been transferred to other areas of the uni-

versity, to fulfill various commitments.

The center's driver education program has been transferred to the area of teacher education, where it will operate at least through the summer.

MSU's driver education program, until today operated by the Highway Traffic Safety Center, is a leader in the field, the first such program to offer a master's degree, weighing heavily on the social sciences.

The driver education program trains police traffic administrators, driver education teachers, highway and traffic engineers, traffic researchers and leaders for community safety councils.

During the past five years, the MSU driver education program has trained over half of the driving teachers in the state and developed much of the course material used for driver education classes for the state's high schools.

Under Prof. William A. Mann, the center helped several counties throughout the state provide driver safety schools which provide educational exposure to traffic problems.

It is this type of school to which traffic violators are sent after accumulating 12 points in violations. A violator pays up to \$10 to attend the school and after completing the course, his sentence may be suspended by the court.

MSU has selected the course See BUDGET Page 11

## Budget Cut Kills Safety Center

# College Vote Aids Con-Con

Michigan students who fail to register for Con-Con primaries on July 25 do a disservice to themselves and to their problem-laden home state.

When Michigan, after being accused of every maladjustment from financial irresponsibility to political skullduggery, finally turns to the constitutional convention as a possible panacea, it expects the people of the state to respond.

At least, the college population owes it to itself to share in the decision of who should be allowed to examine Michigan's constitution with an eye toward its reorganization and possible improvement.

WITHIN THE state, it's a chance for dissatisfied residents to voice some sort of an interest in the future of Michigan and its residents. Outside the state, it's a chance for Michiganians to show they care about what happens to the "Water Wonderland" in which they live.

And who should be more concerned than college students who will graduate to positions of responsibility within business or industry—maybe even government?

These decision-makers of the future can begin even now to make some choice about how the state will be run in the future. This means not only voting for delegates, of course, but keeping an eye on the convention when it opens in October.

And it means voicing an opinion by personal contact or letter about how the delegates vote to reshape Michigan's government before the final decisions have been made.

And on college campuses, they say, springs the first true indication of what the finest young people of a state think.

And on college campuses, are the deepest thinkers among potential political and social leaders.

That's what they say, anyway.

## Letters to the Editor:

### Recommendations

#### To the Editor

Does Dr. Truitt, director of men's division of student affairs, have the right to write a recommendation on any student? If this in any way includes an evaluation of the student's character or the extent of his participation in extracurricular activities, my answer is "no."

I believe the insurance company should have asked Dr. Truitt for Chapman's academic and living unit record. I question Dr. Truitt's qualifications to pass judgment on any other area of a student's life, unless he knows the student personally.

He is even less qualified to pass a bias and obviously false judgment as he has done in this case, when he says Chapman "is a rather shy individual and I am not sure that he meets people extremely well." A "shy individual" who has been a member of the International Club, Campus UN, Advisory Board, and who is currently helping the Y with its program for disturbed children.

Any evaluation of character must, in my opinion, come from either a previous employer, a faculty member, or from a responsible individual who has lived with Chapman. Dr. Truitt cannot possibly, even after having talked with the student for an hour or so, pass any judgment of character which will be accurate enough for a third party to

formulate its opinion of the student.

Dr. Truitt's letter is a poor example of the caliber of MSU's administrative staff. I challenge the right of such an individual to retain any administrative position at any institution of higher learning.

George W. Hill

### Axe Falls

To the Editor:

Well, the axe fell . . .

The writer of the late series on Civil Rights is being sued. A faculty advisor has been removed. Pressure was put on the staff, editor and others involved . . . enough, anyway, to stop the series from being enlarged as it could have been.

I suppose one can consider the series a success by the very criterion discussed in the series. I only hope that this won't be the end of the liberal, exciting and vital journalism on the part of the State News that this has been. I hope those in final charge will be undefensive enough to allow such to continue.

I hope that the paper will be able to dig truthfully and honestly into all the problems raised by this series. I hope those on the staff find strong and warm support from both faculty and students. The staff is really out on the limb this time. Apathy alone can finish the whole thing off. It will certainly be easy now to see what the local society will do with those who dare to deviate, question, and think.

## Over Five Years

# Library Quantity, Quality Notes Significant Increase

The quantity and quality of the library's research material has increased significantly in the past five years, Dr. Richard Chapin, director of the libraries told a recent meeting of the Board of Trustees.

"Today, Michigan State University possesses a true research library which is beginning to attract scholars from the entire country," Chapin said.

Research collections were adequate only in some of the sciences five years ago, he said.

"We had barely two or three shelves of books on Africa; today we have well over two thousand volumes including ninety-five different journals directly concerned with Africa."

EVERYTHING published in Nigeria and Ghana is automatically sent to the library through a dealer-agent on the spot, he said.

Annual corporation reports have increased from less than 100 five years ago to 1,200 today, many of them dating back to the 19th century, he said.

History and literature collections are growing rapidly and the veterinary medicine collection is "the finest historical collection of rare books in the country," Chapin said.

The library is participating in the Farmington Plan, a national cooperative project to acquire for American libraries one copy of every book pub-

lished abroad. Psychology is MSU's area of responsibility, he said.

MICROFILMING has been a means of quickly and inexpensively adding significant research material. In May of this year microfilms were used by 1,180 readers, according to Chapin.

A current project which will add 65,000 titles to the library is the acquiring on microfilm of all books published in England before 1640 and all books and magazines published in America before 1800, he said.

The purchase of entire private libraries in recent years has included the addition of rare and extensive collections of material on the American Communist Party, the Far East, the French monarchy, Classical Spanish literature, and American and English literature.

"Michigan State University is growing at a more rapid rate than the average library of Big Ten schools," Chapin said. By 1966 we will be adding more volumes than the average for the Big Ten, he said.

CHAPIN said that plans for future resource development assume these needs in the three major classifications of knowledge:

1. In Science the major need is for serial literature with special emphasis on current subscriptions and the relatively recent bound volumes.

2. In Social Science documents, newspapers, and pamphlet materials are the primary concern.

3. The needs for Humanities are the old, the rare, the unique, and the primary source.

"WITH TIME, resources, and continued support, Michigan State University Library will continue its rapid development, Chapin said.

Growth of the research facilities was reflected in 1958 when MSU was selected for membership in the Association of Research Libraries, a group of 45 libraries serving the research needs of the country, he said.

The "young, well-trained and enthusiastic" library staff is one of our most important assets, Chapin said. The staff is equipped to handle 17 different languages including the traditional Western European languages, all of the Slavic languages, and the two major Oriental languages, Chinese and Japanese.

Each member of the staff has at the minimum, with two exceptions, the Master of Library Science degree, he said.

THE LIBRARIANS major functions are to select and acquire materials, organize these materials, and facilitate their use. "It is only with a fine degree of cooperation between faculty and staff that research collections are developed," he said.

## Durbin Talks on Far East

A Far East editorial writer for the New York Times, Tillman Durbin, and his wife Peggy, will address the sixth annual summer Asia Institute here Friday.

The address, "Trends and Tendencies in Communist China," will be at 8 p.m. in the Kiva of the Education Building and is open to the public.

Before he took his present position, Durbin was chief of the Times Hong Kong bureau, and covered China and Southeast Asia. He also covered the conflicts in Korea, Indochina and Algeria.

Durbin was an accredited war correspondent with American, Australian and British forces during World War II. He covered the war in Malaya, Java, New Guinea, Guadalcanal, India, Burma and China. He covered the first B-29 bomber raid on Japan from a base in West China.

After the war, Durbin became chief of the Times bureau in China. He was based in Nanking, and followed the clashes and eventual full-scale warfare between the Kuomintang and the Communists. In 1948 he went to Harvard for a year as a Nieman Fellow.

Prior to World War II, Durbin spent six years with the Chinese owned daily newspaper, The China Press, and became its managing editor. When the China-Japan war broke out, he joined the New York Times as a staff correspondent and for four years traveled the length and breadth of China. His assignments often took him to the front lines with Chinese combat units.

The first sugar beet factory was built by Franz Karl Achard in Silesia in 1802, with the aid of the King of Prussia.

**Kadduri Represents MSU**

**Arab Students Hold National Convention**

Wallid Khadduri, president of the Arab club, and five other members will represent their MSU organization at the 10th annual Arab convention at the University of Minnesota from Aug. 28 through Sept. 2.

He is one of 30 Arab students chosen from among 5,000 students to participate in a public speaking seminar held during the convention.

Participants in this seminar will present a five-minute oral speech by which they will be judged.

**THE NATIONAL** convention which has been meeting annually since 1951 entertains ambassadors, professors and students from colleges and universities throughout the U. S.

It is made up of 76 delegations from Arab clubs from all over the U.S., mostly from

**Smoke, No Fire Caused by Beans**

Smoke coming from the apartment of Mr. and Mrs. Jose Rodrigues, 1402-C Spartan Village, Wednesday, caused an alert neighbor to call the MSU fire department.

Fire department and Department of Public Safety officials, using a master key to gain entrance to the locked apartment, soon discovered the cause—a well-cooked pot of beans.

No damage was reported but a smoke detector had to be used to clear the apartment to eliminate possibilities of smoke damage, fire department officials said.

midwestern states, and delegates from other nationality clubs.

The theme for the 1961 convention is "Reappraisal of the Arab Problems."

Discussions will cover the political, economical, and social aspects of the Arab problems.

**THE CONVENTION**, which is sponsored by the Organization of Arab Students in the U.S.A., will also award scholarships to eligible Arab students. And qualified students will be taught the techniques of public speaking by professional people.

Khadduri, who is a sophomore, recently returned from a regional Arab conference held at Illinois Institute of Technology in Chicago over the weekend.

Among the problems discussed at the regional meeting was the problem of marriages of Arab students to Americans.

He said that Americans returning to the Middle East with their spouses find it difficult to adopt the new environment, and even more so adopt the culture.

Other discussions, he said dealt with the Algerian question, and the current negotiations between the French and Algerians. Arab relations with the Kennedy administration and the President's "Palestine question," were also talked about.

From Sept. 30, 1777, until June 27, 1778, the capital of colonial America was York, Pa. During that period, the British were occupying Philadelphia, normal seat of the Continental Congress.

**Gala Fourth Planned**

A Fourth of July celebration will be sponsored by the East Lansing Chamber of Commerce, Kiwanis Club, Lions Club, Exchange Club, and American Legion Post 205 at the East Lansing City Park, M-78 at Alton Road.

The program for the event will include a band concert at 7 p.m. by the Community Band, under the direction of Gerald L. Bartlett.

Square dancing will begin at 8 p.m. with George Bubolz, Jr. calling.

Under the supervision of the East Lansing Police and Fire Departments, a fireworks display will be held at 9 p.m. Fireworks other than the public display will not be allowed.

The celebration will be open to the public free of charge. A freewill offering will be taken at the park to help finance the fireworks display.

Ample parking space is available at the park.

**Dr. Farrall To Head Ag Society**

The American Society of Agricultural Engineers will gain a new president, in Prof. Arthur W. Farrall, head of the Department of Agricultural Engineering.

Farrall will take office as president-elect at their annual meeting at Iowa State University, June 26-28 at Ames.

Farrall will succeed to the office of president for the 1962-63 year upon the completion of one year as president elect.

**Bill May Improve Zoology Study**

By KEN ALMAS  
State News Staff Writer

If you were to talk with Dr. Peter Tack of the zoology department, you would probably be inspired by his desire and foresight in the field of Fisheries and Wildlife.

But there are too few Peter Tacks in that field and he regrets that so few of the zoology students devote their lives to its study.

This situation might change though. A bill, the Magnuson Bill to be exact, is now on the table to appropriate \$700 million for graduate work in the field in which Dr. Tack is so interested, Oceanography.

**WITH THIS** incentive many midwest schools are proposing extensive research in Limnology, which is the study of non-salt water life.

"I would like to see this institution acquire a research vessel on the Great Lakes," Tack said. "Let's face it, 40

per cent of the U.S. population is around the Great Lakes and the environmental characteristics must be of great importance."

Such things of interest would be a study of the confusion of the sounds of fish with that of submarines.

"**IF FISH MOVE** in cigar shaped schools, they can be very confusing to the sonar system," he said. "This is only one small phase of the study; Russia has been on this program for quite a while and it would be a shame to fall behind on something so important."

The program will involve study of water currents and movement in the Great Lakes. Sedimentation studies which give a clue to the movement of biological and chemical activity could also be included.

These studies will also have practical application to fisheries.

## 'Bring 'Em Back Alive' Traffic Theme for 1961

Twenty-five per cent of all persons killed in Michigan traffic accidents last year were not involved in collisions.

There were 388 such highway deaths in 1960, and 95 per cent of them occurred when the cars involved ran off the roads. There was a 36 per cent increase in this type of accident during the first four months of this year.

These facts were cited Monday in the "Bring 'Em Back Alive!" educational traffic safety program being sponsored by the Automobile Club of Michigan in its efforts to reduce the accident and death toll on Michigan's highways.

"THESE startling facts indicate that at least some of our drivers have forgotten portions of what they learned when they obtained their licenses," said Ernest P. Davis, Auto Club director of safety and traffic.

"The chances are excellent that every motorist in the state has learned at one time or another that he must adjust his driving to meet road conditions," said Davis.

"This means not only slowing snow, but also on unfamiliar

roads, on gravel roads, on blacktops, and on winding or narrow roads," Davis added.

Continuing on, Davis said that unfamiliar roads pose a constant question to drivers.

"You never know if there is a pot-hole, soft spot, curve or crossroad ahead," he said. "Nor do you know when you are likely to encounter animals or plodding farm vehicles. Narrow bridges are not uncommon on rural highways either."

Speed limits on various types of Michigan highways do not always mean it is safe to travel that fast.

Davis said he didn't mean that drivers should impede traffic by being slow-pokes, but rather, if they are to "Bring 'Em Back Alive!" they must use common sense.

There is evidence that it is down on ice, or in rain and

safe to drive at the legal limit on freeways and expressways.

But there is just as much proof, shown by the number of accidents and deaths, that legal speed limits on other types of highways are not necessarily safe.

DAVIS suggested that all drivers occasionally refresh their memories by reviewing material on the subject, such as that which is available at local police and sheriff's departments.

"No one should be frightened by the statistics," said Davis. "Nor should you stay home because you fear danger, as there are more accidents at home than on the highway."

Drivers should be sure to drive in such a manner that they will "Bring 'Em Back Alive!" every time they drive.

Summer Circle Theater, "Rain" by Colton and Randolph, Demonstration Hall, 8:30 p.m. July 5-8

## Professor Contributes To Book

Dr. Richard S. Rudner, associate professor of philosophy, is a contributor to a new book, "Current Issues in the Philosophy of Science."

The book is a collection of addresses given at the 1959 meeting of the American Association for the Advancement of Science and is edited by Herbert Feigl and Grover Maxwell of the U of Minn.

## Poultry Study Completed

M. L. Esmay, professor of agricultural engineering at MSU and N. T. Odden, of the University of Massachusetts, have found that attic inlet ventilation systems for insulated poultry houses can provide extra heat during the winter.

Their findings were reported during a session of the annual meeting of the American Society of Agricultural Engineers at Iowa State University.

Tests at MSU showed an average temperature increase of 1.4 degrees when the ventilating fan was operating during the test period.

ODDEN and Esmay reported that maximum temperature increases of 12 degrees were recorded during clear days when solar radiation was at its highest.

They also reported that maximum heat losses of five degrees were recorded in the early morning hours before sunrise when the sky was clear and re-radiation was greatest.

In the tests, heat gains or losses were measured as incoming ventilation air passed through the attic chamber.

The ventilation system tested was an exhaust system with a slot inlet next to the wall opposite the exhaust fan.

THE FAN was controlled by a thermostat set at 47°F and a time clock set so that the fan operated for at least 30 seconds in each 10-minute period.

The two researchers think greater temperature increases can be obtained by improving ways of diffusing the incoming air throughout the attic chamber.

Credit costs can be regarded as business expenses the same as labor, feed and housing costs, say Michigan State University agricultural economists.

## Authentic Indian Madras in a Summer Costume

At a wonderfully low  
fashion-wise price

# You Must Pull the Right Strings To Get Into This Congress

By ELLEN JENKS  
State News Staff Writer

If you have passed Williams hall recently, you have probably heard the strains of music which seem to escape from all windows. This is where the 98 scholarship students from 35 states, Canada, Hawaii and Puerto Rico, are staying for the third annual Congress of Strings.

The Congress, which is sponsored by the American Federation of Musicians, began on June 18 and will continue for

eight weeks in a series of seminars and sectional rehearsals under the instruction of noted string teachers from the nation's foremost symphony orchestras.

Dr. Paul Oberg, head of the music and education departments of the University of Minnesota, is dean of the String Congress.

**THE CONDUCTOR** is Thor Johnson who for eleven seasons was music director of the Cincinnati Symphony. Currently he is serving as a music

member of an advisory committee on the fine arts in the U.S. department of State, and conducting the Chicago Little Symphony.

Other eminent musicians on the faculty include:

Rafael Druain, concertmaster of the Cleveland Orchestra, Frank Houser, Concertmaster of the San Francisco Symphony, Mishel Piastra, conductor of the Longines Symphonette, Warren Benfield, double bass of the Chicago Symphony, Lorne Munroe, principal cellist of the Philadelphia Orchestra.

**WILLIAM LINCER**, solo viola of the New York Philharmonic, Theodore Salzman, principal cellist of the Pittsburgh Symphony, Louis Krasser, professor of violin and chamber music, Syracuse University, and Hyman Goodman, concertmaster of the Toronto Symphony Orchestra.

The student members of the

String Congress are winners of community auditions conducted by locals in the U.S. and Canada.

The scholarships provide for transportation of the students to and from their homes, room, board, and tuition at Michigan State.

**THE CURRICULUM** includes private instruction, practice sessions, and seminars. The group meets in full twice a week under the direction of Johnson.

Later the students will appear in weekly programs which will be open to the public. Broadcasts will be heard on the MSU station, and recordings will also be made there with participating students receiving records made by the groups in which they play.

In a concert on July 17, they will play for the first time an original composition by Dr. H. Owen Reed of the M.S.U. faculty of music.

On July 20, some will be participating in Verdi's Requiem with Robert Shaw conducting.

## Get Shots and Avoid Polio

Polio is a word which becomes very real and meaningful to many during the summer months. Dr. Albert E. Heustis, state health commissioner, recently reminded those that have failed to be immunized, that there is still time to be protected.

Needless crippling can at least partially be avoided if those not vaccinated will hurry and get their shots, he said.

"By having one shot now and a second a month later," Heustis said, "you may be providing yourself the margin of safety which could mean the difference between your spending the rest of your life as a healthy person or a cripple."

Polio is known to strike the young the majority of the time but adults can also become victims. The peak of the Polio season is usually in late August. Immunization should start at the age of three months. The first injection in an initial series of three is followed by a second a month later and the third seven months after that.

## Dr. Boyd Given Award

James Boyd, professor of agricultural engineering, received the 1961 Distinguished Service Award of the Metal Building Manufacturers Association and the American Society of Agricultural Engineers

Dr. James Boyd, professor of agricultural engineering.

at the Annual ASAE banquet Wednesday at Iowa State University.

The award is given annually in special recognition of significant efforts to advance the design, construction and utility of agricultural structures.

Boyd, third to get the award, is a native of South Dakota. He has been on the MSU agricultural engineering staff since 1947.

As head of the farm structures section, he has developed a program of research, teaching and extension which now has 12 active research projects.

Telephone companies in Japan have a difficult time assigning telephone numbers because certain numbers mean good luck, wealth, bankruptcy and death. Auspicious numbers bring a high price. Unlucky ones are passed out to unwary foreigners.

# Glick Plans 14-Nation Trip

By BOB SNELL  
State News Staff Writer

Gaining a better insight into the background, philosophies, and problems which motivated European landscape designers is the purpose of a 14-nation tour of Europe being planned by D. Newton Glick, landscape architecture studies chairman.

Glick and his family will sail from Montreal July 7 for Southampton, England. Upon their arrival in England, they will purchase an automobile.

By ferry, the Glicks will transport their car from England to Ireland and Scotland.

THE FAMILY plans to visit Norway, Sweden, Denmark, and Germany from Aug. 17 to Sept. 8.

Other nations included in the itinerary will be Switzerland, Austria, Belgium, Netherlands, France and Italy.

"In each country an attempt will be made to study the outstanding phases of landscape development from both the historical and contemporary viewpoints," said Glick.

Included in Glick's studies will be projects involving housing, urban planning, highways, industrial sites, shopping centers, school and university grounds, and botanical gardens.

SPECIAL concentration will be on various phases of public recreational facilities such as playgrounds, parks, and resorts. Contacts will be made with those people most responsible for the developments.

According to Glick, little has been published on most of these European works.

He said he plans to take colored film slides to be used in his landscape architecture teaching.

"OUR RAPIDLY expanding population promises a much more urbanized, regimented, and crowded future for all mankind," commented Glick. "Accompanying this population explosion will be increased leisure time and better transportation, making it possible to travel farther, faster."

Glick indicated that he feels the design of all outdoor areas, including the location of structure within it, is becoming more critical at all levels.

"Landscape architects not only have a particularly challenging and demanding future but also the road for superior training which requires the most competent teachers," said Glick.

HE SAID that he feels travel and study in Europe, where the historical roots of landscape architecture lie, is very beneficial.

"In many ways, European landscape architecture and urban planning that have been created since the last war are far more developed and advanced than in this country," said Glick.

European shopping centers include large plazas, sculptures, and fountains. Automobiles are kept out, utilizing a consideration for the pedestrians.

A DESIRE to study Italian, French and English landscape design was expressed by Glick. This design was created during the renaissance period and still remains today.

A six-month leave of absence will be taken by Glick from the department of urban planning and landscape architecture for his trip. He plans to return for winter term, 1962.

## Beaumont Recital Beginning

Wendell Wescott, MSU's carillonneur, will begin his annual series of summer recitals at 4 p.m. on Sunday July 2.

Extending through July 27, the recitals are scheduled for each Sunday at 4 p.m. and for Tuesdays and Thursdays at 8 p.m.

The Independence Day recital will start at 4 p.m.

Wescott's selections for the public recitals vary from traditional classics to folk songs and spirituals. The July 4th program will include patriotic melodies.

Copies of each week's program are available on the ground floor of Beaumont Tower. Visitors may tour the belfry following each recital.

Wescott, as associate professor of music, has been playing the 18-ton, 47-bell Beaumont Tower carillon since 1950.

A graduate of the Staff Nees Royal Carillon School in Belgium, he has performed on carillons in England, Scotland, Holland and the United States.

"Tower bells have for centuries played a unique role in European communities, particularly in the Low countries of Holland and Belgium. Capable of being heard over a vast area, they have contributed immensely to the spirit of national, civic and religious occasions," according to Wescott.

## New Beet Planter Developed

A precision sugar beet planter that makes possible greater efficiency in thinning, cultivation, and harvesting operations has been developed at Michigan State.

R.J. Jimenez and W.F. Buchele, MSU agricultural engineers, described the machine at a session of the American Society of Agricultural Engineers at Iowa State University.

The new sugar beet planter can deposit seeds so they have no forward movement even though the machine is moving forward. This prevents the former problem of seed scattering down and to the sides of the row.

The seed meter device can select individual seeds from a mixture of different sized seeds, the researchers reported.

The United States is the world's largest producer — and consumer — of bismuth.

## Top Skating Instructors Teach MSU Ice School

By TOM DEWITT  
(State News Staff Writer)

Who says that Michigan State isn't out to please everyone in the good old summer time?

For instance, there's tennis, golf, swimming, canoeing and ice skating . . . yes ice skating! Not 100 yards from the outdoor pool is the ice arena where 137 young ice skaters of the 13th annual summer ice session practice difficult routines with the ultimate goal of becoming gold medal skaters and possibly Olympic competitors.

The ages of these skaters vary from 9 to 18 years and they come from all over the United States and Canada.

For all of them, the day is long. Some begin their work as early as 5 a.m. and many, stopping only to eat, continue until the arena closes at 10 p.m.

Each skater practices a "patch" for about 45 minutes with an instructor after which the ice is cleaned and resurfaced for the next group. Later in the day the skaters practice the "dance" and "free style." All three later make up the test for the various skating

medal: bronze, silver and gold.

The instructors are the tops in the country. This year's staff is made up of Pierre Brunet of New York; David Spalding and Beryl Williamson of Lansing, and Montgomery Wilson of Boston.

The school is the largest of several in the country and was originated to aid the competition skaters who were forced

to stop their practice when warmer weather set in. The total session lasts for eight weeks during which the skaters may take the medal test and improve their technique.

Also as an added feature the school puts on three one hour ice shows the first one being scheduled for July 26.

While on campus the skaters are staying at the Kellogg center and Gilchrist dormitory.

## Tuning in on the Tigers

A total of 84 home runs was hit in the first 36 games of the 1961 season at Tiger Stadium, 43 by Detroit, 41 by opponents.

## European Trip for \$300

An opportunity to fly to Europe will become a reality to MSU faculty and students next summer through a program sponsored by the Men's Club.

A choice of four, six, or 10½ week tours will be given to the participants, reports Wilbur Nelson, MSU photo editor and arrangement manager for the program.

A round trip fare of \$300 will be charged for the chartered flights from Detroit to London and the return trip from Paris to Detroit. In Europe the participants will be on their own.

This advanced schedule is being offered to give those interested ample time to make plans for the trip.

The 10½ week trip leaves June 23 and returns Sept 5. Those staying six weeks leave June 23 and return from Paris on August 6. The four week stay includes the period between August 5 and Sept. 5.

For further information contact Wilbur Nelson in the MSU Photographic Laboratory, Room 10, Agricultural Hall, Ext. 3068.

Detroit, was the climax of the longest Tiger winning streak in 12 years. In 1949, they won 10 in a row.

★ ★ ★  
Norm Cash had hit only four home runs in the major leagues before joining the Tigers. He belted 18 last season and has 24 so far this season.

★ ★ ★  
Frank Lary has a 25-9 lifetime record against the Yankees, best of any active pitcher in the American League.

## Tennis, Golf Deadlines

The IM office Wednesday announced the deadline for the tennis and golf tournaments.

Tennis deadline is Friday July 7, and play will begin on Monday July 10.

The golf deadline is Wednesday July 12 and the tournament will be played on Saturday July 15.

The office also said that they will sponsor a co-recreational volleyball tournament if enough people are interested. Persons wishing more information on the subject should stop in at the office, 201 IM building, or call Ext. 2881.

## Tournament Set For Wednesday

The IM softball tournament will begin play on Wednesday July 5.

## Harness Signs Pact With Bears

The Chicago Bears of the National Football League signed Michigan State end Jason Harness, their 10th draft choice, Saturday. He will be used as a pass receiver by the club.

Harness, 210-pounder from St. Joseph, caught the touch-down pass in the final seconds of the first half of the Pittsburgh game last fall, tying the score for the remainder of the game.

He joins five of his team mates who signed earlier this year. They are: Herb Adderley, Green Bay Packers; Fred Arbanas, Dallas Cowboys; Fred Boylen, New York Titans; Ike Grimley, Houston Oilers and Mickey Walker, New York Giants.

## Center Studies Cancer

Cancer, tooth decay, and other research projects are being carried out in the \$620,000 Biology Research Center which was completed in 1960.

Largely financed through grants from the National Institutes of Health, the two-story building provides modern equipment and more room for eight MSU research projects. It also houses MSU's second electron microscope.

The center is designed to enable graduate students to work closely with their major professors. The building also puts researchers with mutual interests in close contact with each other by housing allied projects under one roof.

Most of the ground floor is taken up by the laboratories of Dr. Harrison R. Hunt, professor emeritus of zoology, and his associate, Dr. Samuel Rosen, assistant professor of zoology and natural science. They are engaged in a 24-year-old research project on dental problems.

A large section of their laboratories is air-conditioned, not for the comfort of the scientists but for the well being of thousands of rats. The rats are used in experiments to determine the role of heredity and other factors in tooth decay.

The new center is also the scene of embryology research by Dr. John R. Shaver and Dr. Stephanie H. Barch, cancer-related plant cell studies by Dr. G. B. Wilson, entomology research by Dr. Roger A. Hoopinger, biometrics studies by Dr. Philip J. Clark, histochemistry studies by Dr. Richard A. Fennell, genetic research by Dr. Armon F. Yanders and cancer-related fungus studies by Dr. Everett S. Beneke and Dr. Joseph A. Stephens.

The \$25,000 electron microscope can be used to produce photographs of viruses and other small subjects at magnifications of 200 thousand times normal size.

In addition to laboratories, the center contains a biological sciences reading room and offices for the researchers.

### The State News

Published by the students of Michigan State University. Issued on class days Monday through Friday, during the fall, winter and spring quarters. Issued twice weekly during the summer term. Second class postage paid at East Lansing, Michigan.

## Market Employees Receive Grants

Twelve employees of 12 supermarkets were named winners of \$1,500 manufacturer-sponsored scholarships in the Executive Development Program in food marketing management offered by the department of marketing and transportation administration. The announcement was made by the National Association of Food Chains.

The winners of the scholarships are selected from hundreds of employees of wholesale and retail food marketing organizations who compete annually for the scholarships.

The 1961-62 scholarship winners from MSU are: Thomas P. Tarpey of Chicago, Illinois (Cambell Sales Company); Gerald B. McKeever, East Lansing (Chain Store Age); Gil R. Achterhof, Geneseo, Illinois (Gerber Products Company); James E. Gregory, Detroit, Michigan (The Hopp Press, Inc.); Ansis Abel, Grand Rapids (S.C. Johnson & Son, Inc.); Richard T. Hurst, North Caldwell, N.J. (La Choy Products); John S. Dailey, Midland, Michigan (Lever Brothers); James J. Kuster, Omaha, Nebraska (Phillip Morris, Inc.).

**OTHER WINNERS** are: Charles E. Baker, Birmingham, Alabama (Savannah Sugar Refining Corp.); Ralph G. Fisk, Elgin, Illinois (Star Kist Foods, Inc.); Neal T. Jansen, DuPere, Wisconsin (The Sperry & Hutchinson Company); and Glen H. Stoup, Jr., Kent, Ohio (Tyler Refrigeration Corporation).

Names in parentheses are sponsoring companies.

Mr. C.G. Adamy, Executive Vice President of National As-

sociation of Food Chains, said the scholarship aid is an example of the cooperation between food industry manufacturers and distributors to build a more efficient and productive food industry to better serve American consumers.

HE SAID the program for which the scholarships are granted is designed to help develop capable and well-educated young people to fill the growing number of executive positions in all segments of the food industry.

The Curriculum in Food Marketing was inaugurated by the National Association of Food Chains 11 years ago. It was founded at Michigan State and has been expanded to Cornell University and the University of Southern California.

NEXT WEEK "RAIN"

## Dr. McCauley Cited for Paper

Dr. Robert F. McCauley, associate professor of civil engineering, has been cited by the American Water Works Association for a paper he wrote for its journal.

McCauley's paper described a method he developed to coat the interior of municipal water pipes to prevent rust.

It was judged the best paper in that field of interest for the award year.

The citation states:

"THIS PAPER is valuable

not only for its clear exposition of an important research project, but for the fact that it introduces a practical means of protecting water distribution systems from the ravages of corrosion."

A member of the university staff since 1947, McCauley holds the B.S. degree from New Mexico College of Agriculture and Mechanical Arts, 1939; the M.S. from MSU; and the D.Ss. from Massachusetts Institute of Technology, 1953.

FAIRCHILD THEATRE  
Admission: 50c

# MSU Golfer Hits In Buick Open

MSU golfer Gene Hunt is among 159 professional and amateur golfers playing in the 72 hole Buick Open at Flint.

According to John Brotzmann, MSU golf coach, Hunt is one of the top three players on the team.

"He is a great match player and he hits the ball about as far as Nicklaus, the great amateur from Ohio State," he said.

HUNT WAS defeated by Nicklaus in the NCAA golf tournament at Lafayette, Ind. in the semi-final round last week, by six holes. Nicklaus went on to win the championship.

Purdue won the team title and MSU finished sixth out of a field of about 34 teams.

Hunt played Blancus of Houston, one of the top golfers in the southwest, and defeated him for the berth in the semi-finals.

Hunt, who averages 76.7 on the par 72 Forest Akers course, won the state Public Links title two years ago.

Brotzmann said that Hunt's average was really not a true

measure of his ability, because it is taken from the start of the season when the course isn't up to its' best form.

# Governors Terminate Conference

The 53rd annual Governors conference, held this year in Honolulu, came to an end Thursday with a resolution to meet again in Hersey, Pa. June 30th of next year.

The conference picked New Hampshire Governor Wesley Powell as its chairman for next years meeting.

The governors also adopted a resolution calling for "tough and imaginative action to stop the accelerated communist drive for world domination."

# Compacts Decrease Revenue

Michigan motor vehicle registrations for the first seven months (since November 1, 1960) of the 1961 license year are 73,037 above the same period last year.

A report issued by James M. Hare, Secretary of State, shows that 3,430,254 vehicles now carry Michigan license plates compared to 3,357,217 a year ago.

Hare pointed out, however, that the weight tax on these vehicles was up only \$101,665.42, rising from a total of \$62,893,851 in 1960 to \$62,995,516.42 in 1961.

"The lower weight of popular domestic and foreign compact cars is reflected in this decrease in revenue," Hare said. "If the average weight of the 73,037 additional vehicles we registered this year had been maintained, the State of Michigan would have collected well over a million dollars of additional revenue."

ACE GOLFER—Pictured at left is Gene Hunt, MSU's entrant in the 72 hole Buick open.

content, materials and, in many instances, found the teachers for these driver safety schools.

The 12-point violation system has also forced the Secretary of State's office to seek help from the center. The law requires that each 12-point violator must be interviewed by the Secretary of State's office.

Using an individual interview basis, the Secretary of State's office was soon swamped with an overload and backlog of drivers waiting to be interviewed. The center developed a group interview technique which is now being used on an experimental basis.

Was the Highway Traffic Safety Center's public education program of any value? Is any accident prevention program of any value?

The value of the center's public education program was not a tangible thing—a fact which probably helped to close the center.

But a look at the state's traffic situation for the past two years may be an indication that programs like the center's are valuable.

Michigan residents have been enjoying the lowest auto insurance rates in the country, a pleasure which may be lost shortly, due to the rise in the number of accidents. The auto accident rate has been climbing steadily since the state abandoned its accident prevention program approximately 2½ years ago.

for accident prevention, the number of accidents is increasing.

In 1959 Michigan held the morbid honor of collecting 1,473 traffic fatalities and 64,873 injuries (out of 189,771 accidents). The injury rate was up 40 per cent for 1960 and there were 209,742 accidents. The 1960 traffic fatality rate was up eight per cent, but additions are still being made to that column.

The dismantling of the MSU Highway Traffic Safety Center may well prove to be what Gordon Sheeha called "a tragic loss for the people of Michigan and in a sense the nation as well," as the traffic accident rates and traffic problems multiply.

## Cast Named For Maughm's Famed 'Rain'

The cast list of "Rain", Somerset Maughm's famous story of Sadie Thompson has been posted and rehearsals are under way for the show.

The play will be the second production of the season for the new Summer Circle theatre. It will open July 5 and runs through July 8.

It will feature actors who are well known to regular University Theatre patrons. Included in the cast will be the former Linda Kohlhof, now Mrs. John Herr, and Thomas Patchett who played the part of Omar the tent maker in last spring's production of "Kismet."

### OFF-BROADWAY VET

NEW YORK (AP)—John Wynne-Evans is a very busy actor currently in off-Broadway productions. His appearance in "Happy as Larry" was his 14th role of the season in experimental productions.

# Recovery Inc. Aids Mentally Ill

By DUANE HAYES  
State News Staff Writer

Seventeen million persons suffer from mental illness in this country—at a cost to state governments of over \$1 billion a year.

Also, at this time there are only 30,255 combined psychiatrists, psychoanalysts, and psychologists to treat these millions.

Before Recovery came along, emotionally disturbed people tried to hide being nervous patients. At a Recovery meeting they begin to discuss their illness cheerfully with others on the panel.

RECOVERY, INC., organized in 1937 by the late Dr. Abraham A. Low, Chicago psychiatrist, is a group practicing the self-help method based on Dr. Low's book, "Mental Health Through Will Training."

It is an independent, non-affiliated, self-supporting non-profit organization.

One of the 400 active groups of Recovery, Inc., now in existence in 29 states, is located at East Lansing. It meets in the All Saints Episcopal Church, 800 Abbott Rd. at 8 p.m. on Wednesday evenings.

It is conducted by a qualified leader who must have

been a former nervous person or mental patient trained in the techniques developed by Dr. Low.

LEADERSHIP classes are instructed at Detroit and Brighton for Michigan leaders.

Recovery, Inc. uses after-care techniques, and these group therapy techniques help prevent relapses in the former mental patient in adjustment to the community following hospitalization, and assists the nervous patient to avoid chronic upsets.

"Most of us suffer from self-doubt, a total sense of insecurity," one Recovery member says, "but we blame everything and everyone around us for it. We want to be exceptional, but fear that we aren't even average—and set our standards too high."

THIS MAN had skipped from one job to another over many years in a highly skilled trade because of his inner turmoil.

"For instance, if a couple of other workers were talking together, I was sure they were talking about me. It would make me mad, and I'd quit," he says.

He attributes his security in his job today, ownership of his home and happy family life to the help he has found in his Recovery group.

# First Night

Photographed by Art Wieland

Two minutes to curtain — tension peaks — you're ON! And Blithe Spirit, the first presentation of Summer Circle, is under way.

As the first player enters and crosses the stage the audience is transported to a strange world of make believe. The creation of this particular world of make believe began three weeks ago before spring-term finals.

The hope that this time was well spent is reflected in the tense expectant mood of the players.

Now, the State News camera has captured the mood which the audience is not able to see in the performance.

**MIRROR, MIRROR** — Jeanne DeHaas prepares for her entrance in the third act.

**ECTOPLASM?** — Judith Nichols applies the Makeup which transforms her into a ghost.

**LAST MINUTE CRAMMING** — Bud Spangler hurriedly reviews his lines before going on stage.

**CURTAINLESS CURTAIN CALL** — Following the performance the players return to the arena to acknowledge their plaudits.
