TRAVEL, by road and by rail, has come a long way in a matter of months. In the fleet, streamlined Zephyr train, and in the new, authentically modern LINCOLN-ZEPHYR, is a wholly new conception of transportation! Each is full of new ideas of design, performance, economy of operation. Each is, in its field, the pattern for the future!

The first unusual idea in the LINCOLN-ZEPHYR is the V-12 cylinder engine. Lincoln engineers designed it; it is built alongside the Lincoln engine in the famous Lincoln precision plant. It develops 110 horsepower, and gives, owners report, 14 to 18 miles per gallon! It is the only V-12 engine in any car under \$3000.

The streamlines of the car are as graceful as the lines of the Zephyr train and, like them, have a reason. For underlying the sweeping contours of steel is a "bridge" structure of steel trusses, light in weight, great in strength. Passengers ride near the center, even in the back seat. The body is cradled on soft transverse springs that make the going easy even over roughest stretches.

Refreshing in appearance and performance, the LINCOLN-ZEPHYR will keep its modern looks and its modern ways for years. You are literally buying a 1937 car now! Arrange soon for a

demonstration. Take a long run, if you have the time . . . but even a five-mile spin will create the fine impressions that ownership later confirms! The Lincoln Motor Company, builders of the Lincoln and Lincoln-Zephyr motor cars.

110 horsepower. V-12 motor. Wheelbase 122 inches. Springbase 133 inches. Room for six passengers and luggage. Seven colors. Safety Glass throughout. Owners report 14 to 18 miles per gallon.

PRICED FROM \$1275 AVAILABLE IN TWO SEDAN BODY TYPES.
