NEEDS NO HAND TO ROCK THE CRADLE

---

Electrical Device Perfected for Keeping the Cradle in Motion  
and for Amusing the Baby by the Play  
of Colored Lights.

**NEW METHOD OF ROCKING THE BABY**

THE baby has been the last member of the family to which electricity has proved a boon. All the other members of the family found the cook have in one form or another been beneficiaries of electric science, and now the electric cradle, with its fanciful revivifying member.

In many residences electricity is employed for lighting, for electric elevators, and sundry minor domestic purposes, and as such harness the motor cradle is now provided.

This device, says the Philadelphia Record, is a great improvement on the old rocker, as it can be set in motion and will run indefinitely, and is capable of regulation, so that any degree of oscillation can be secured. The motion is imparted to the cradle by means of a small electric motor, connection with the current supply being made by means of a flexible cord and plug attached either to the electric wire or to a special socket in the baseboard. The motion may be accelerated or slackened simply by turning a switch, causing the motor to stop at different speeds.

At the foot of the cradle is a revolving globe studded with lamps of different colors, and as soon as the cradle is set in motion these are illuminated and their ever-changing colors are a constant source of delight to the children. Any one who has watched children in order to watch the lights trolley car will appreciate the amusement these revolving lights will afford.

Once a baby's mind is directed to the slow, even motion of the cradle, its mysterious lights soon lead him to associate models of sewing machines are noted as that a motor can be readily attached to the motor motion dispensed with when a motor capable of running a sewing machine is sold for about double the cost of the machine, and the loss of the purchase money when compared with the time of immemorial creation. When the time is thus applied the pedal is used for the current on and off.
