CHIMES TO STRIKE THE PASSING HOURS

The Peoples Bank Puts Illuminated Town Clock on Its Building

The Peoples Bank has erected a magnificent electric illuminated clock on the front of its bank building, not only adding materially to the appearance of the building, but providing a service which will be greatly appreciated by the general public.

The most distinctive feature of the clock, other than its unusually artistic construction and the perfection of the complete set of Westminster chimes with which it is equipped, is that it is illuminated.

The big clock is operated by electric power and is controlled by a master clock within the building, in the main banking room. This is an especially hand structure of bronze and plate glass construction, with a 12-inch dial, and guaranteed to keep perfect time.

The hands of the big clock are sent ahead one minute by electric power, the connection between the two instruments being perfect and lasting correct time on the large clock on the inside as well as on the master clock inside.

The clock is attached to the front of the bank building at a sufficient elevation to be plainly visible from all parts of Exchange Place. The clock is seven feet in height, by two and one-half feet in width, of dark green bronze, with copper hood at top and bottom. Both faces of the clock are alike, the dial being mounted on the front and the chime bells, which are not copied until they are produced on a very large scale in the council building, are on the rear.

At the quarter, half and three-quarter hours, the clock will ring in various musical combinations. The chime bells, which are struck by the striking of the full hour, are in a clear vibrant tone.
