**STUGGO BUNGALOW IS CLASSY HOME**

Five-Room Residence Adapted to Narrow Building Lots.

MODERN IN EVERY RESPECT

Popularity of the Bungalow Attributed Largely to the Ease With Which It Lends Itself to Artistic Effects.

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to the subject of building, for the readers of this paper. An account of his wide experience as Editor, Author and Manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1837 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The bungalow type of home appeals to many home builders, especially those who build in cities and suburbs. This is because the man with small capital does not have to invest in a large lot to accommodate the building, and less capital is invested in the home. In reality the average bungalow is nothing more nor less than the first floor of an apartment building—the room arrangement usually is about the same as in an apartment, there rarely is more than six rooms and usually five in such a home.

What probably makes the bungalow popular is the artistic effects that may be gained in exterior appearance and the convenience to the housewife of

the outside walls and the straight lines of the roof and porch make this bungalow attractive in exterior appearance. The overhang of the hip-roof and the dormer at the front help in this simple scheme of design. Another good feature is the wide porch, 22 feet long, with the high walls giving it the advantage of semi-seclusion.

The arrangement of the rooms and their sizes are shown by the floor plan that accompanies the exterior view. The living room, which is exceptionally large—12 by 22 feet—extends across the whole front of the house. At one end is an open fireplace, located so that it may be seen through the double casement opening that connects the living room with the dining room. Four windows opening onto the porch and a double window at the end make this a light, cheery and easily ventilated room.

Directly back of the living room on one side are the dining room, 11 by 14 feet, and the kitchen. A series of four windows light and ventilate the dining room, while the bay projection in the kitchen gives a well-lighted space for the sink and work table and wall cases for kitchen-utensils and dishes. Back of the kitchen is a vestibule and further back is a rear porch, which is as large as an ordinary bedroom. By screening this porch it makes a comfortable, secluded sitting room in summer.

The two bedrooms are toward the back and are reached through the dining room. One bedroom, toward the front of the house, is 10 by 12 feet, while the other, at the corner is 11 feet 6 inches by 13 feet. The bathroom is between a convenient location.

The size of the house, 22 by 50 feet, gives opportunity for a large basement for the heating plant, fuel storage and other storage rooms.

This is an excellent bungalow de-

sign, whether the exterior walls be of stucco or brick or of frame.

The interior is arranged so that the living and dining rooms and kitchen are in one unit and the bedrooms in another.

For the exterior walls of the bungalow stucco is most popular. It may be applied over metal lath, expanded metal, wood lath or any of the stucco bases that are on the market. Metal lath is fire-safe and will not expand or contract with moisture, so that there is little danger of the walls cracking, providing, of course, it is applied by a skilled workman in this material.

The stucco bungalow shown in the illustration is a good example of this type of home design. The building itself is only 22 feet wide, which makes

having all the rooms on one floor so that the housework can be done more easily.

The interior is arranged so that the living and dining rooms and kitchen are in one unit and the bedrooms in another.

**If You Have Tears**

They were not fair and they were very fat, and they probably were near forty, the two talkative persons who sat in front of the woman at the Saturday matinee. And though their costumes of dark material and their black hats were neat and up to the minute, their conversation was a rambling, old-fashioned affair of house, maid talk, accounts of bargains and details about other plays they had seen.

It was just before the curtain rose on the second act that the fattest talker said:

"I felt so sentimental yesterday. And I was home all alone. And I knew I couldn't be happy until I leaved. But I just couldn't cry. So I went in to the kitchen and peeled onions, and I cried and cried and cried, and I felt much better and got a bit sentimental any more."—Chicago Journal.

**He Won.**

The Mudcombe Prevaricating and Debating society was in session and all was proceeding peacefully and harmoniously till the rat story man spoke. "Some people," he said, "consider the rat hasn't got much sense, but they're wrong." For instance, once I saw a mother place her year-old babe in front of the cottage to sun himself, and to keep his spirits up she gave him a little chap a big feeding bottle. As I watched I saw a rat creep up to the child, and my heart was in my mouth. I feared for the baby. But, bless you, the rat was only after the milk! He just slipped the teat out of the child's mouth into his own, and then thoughtfully put the end of his tail into the child's mouth, by way of a comforter. With a great sigh the president handed him the biscuit.—Kansas City Star.

**Predicts Aerial Fire Fighting.**

John Kenton, chief of the New York fire department, thinks the future will substitute roofs of skyscrapers for the present firehouses upon the ground. Here in the branches of the forest of concrete and iron will be stored the fire-fighting apparatus, which will be winged, when needed. He is sure that by that time chemists will have discovered a gas harmless to life but destructive to fire. He also visualizes a radio alarm system installed on every building, which will automatically act upon an alarm of fire and "call out the gas" without human assistance.—Philadelphia Public Ledger.

**DADDY FISH PROTECTS YOUNG**

Funny Father Provided by Nature With "Safety Pouch" to Which They Can Retreat.

The majority of fish are very bad parents, London Tit-Bits asserts. Once their eggs are laid they leave them to look after themselves, taking no interest at all in the babies that hatch out from them.

There are, however, fish which show parental affection, but curiously enough, it is usually the father who, so to speak, pushes the baby carriage, whilst mamma has a good time.

One of the best of the funny tribe is the pipe fish, a little eel-like creature with a long snout. It is often to be found in weedy pools, and has developed a pouch just like that of the kangaroo, in which he keeps his numerous family safe from all dangers whilst they are too small to look after themselves.

In a quiet pool the little creatures, each half an inch or so in length, and no thicker than a fine needle, venture out to have a look at the world. The

father fish remains near them, keeping an eye on their doings and seeing that they do not stray too far. Immediately an enemy appears he gives warning—and the whole family scuttles back into the pouch.

**Views Differ on Meridians.**

The meridian of Greenwich is generally accepted as the starting line from which to reckon longitude and time all over the earth. But objections are from time to time raised against the universal adoption of the Greenwich meridian for such purposes. Recently Italian savants have emphasized these objections by pointing out that on the meridian of Greenwich clouds and bad weather are frequent, interfering with astronomical observations. They suggest that the civilized world should agree to adopt the meridian of Jerusalem as a common reference line, because there the skies are clearer.

**Wealth Properly Characterized.**

A man is rich in proportion to the number of things he can afford to let alone.

**COOLING SYSTEM MOST IMPORTANT**

Many Motorists Experience Considerable Trouble From Their Engines-Overheating.

MEANS TO PREVENT TROUBLE

Most Essential That There Be Free Circulation of Water, Freedom From Scale and Strong Current of Cooled Air.

Every automobile owner or driver knows from experience that a gas engine becomes hot after running for some time. This is due to the explosions or rapid burning of the gas inside the cylinders.

A large percentage of the heat developed in the cylinder goes to heat up the cylinder walls and if these cannot be cooled either by strong blasts of air or water circulated around them, they will become so hot that they will crack and break apart or at least become warped out of shape and become useless. By far the greater number of cars use what is known as the water-cooling system.

**How Water is Cooled.**

The water flows around the cylinder walls and then through piping and rubber hose connections into the radiator where it is spread out in thin sheets or small pipes which have an immense amount of surface exposed to the air. In this manner the water is cooled and then flows back to the engine in order to keep it, also, cooled to the proper temperature.

If any part of the cooling system fails to function properly, the cylinders are not cooled and we say that the engine overheats. Water, as we know, cannot be heated above 212 degrees F. without being placed under pressure. Therefore, the water which flows around the cylinder walls cannot be heated above this temperature. If the water is not kept slightly below this temperature, it will rapidly evaporate by boiling. If the engine is run without water in the water jacket the cylinder walls will be heated above their normal temperature, with the result that the oil will be entirely burned off the cylinder wall surface and the piston will begin to cut small slots lengthwise on the wall with the result that often the engine will, in a few minutes' time, be seriously damaged.

**Necessary Conditions.**

In order that the cooling system work properly, we must have the following conditions:

Plenty of water, free circulation of water throughout the entire system, freedom from scale in the radiator and a strong current of air passing continuously through the radiator to cool the water.

If it follows, that if the engine overheats, some of the previous conditions are not being fulfilled. Usually we look at the fan first, as this is where the trouble most frequently occurs. See that the fan belt is free and that the belt is tight enough to drive the fan with very little slipping, also have the fan blades tipped at the proper angle to draw the air through the radiator.

While the fan belt must be tight enough to turn the fan, care must be taken not to tighten the belt so that it will be broken in a few minutes of running. Next see that there is plenty of water in the radiator; feel of the rubber hose connections to see whether they feel flabby. If they are soft it is very likely that the inner walls of the hose have softened and perhaps entirely filled the opening so that the water cannot flow through.

**NEWSPAPERS MEND MUDDOLE**

Good Traction Is Afforded Wheels and Assists Greatly When Car Becomes Mired.

It is not an unusual thing to become stuck in a mudhole. Carry a few old newspapers in one of the pockets or under the seats. They afford good traction for the wheels and will assist greatly when pulling out of the mud. Never speed up the engine and "jump" the clutch. This will only cause the wheels to spin and dig deeper into the mud.

**GERMAN CAR HAS MOTOR BEHIND SEAT**

Frauteln Trude Hesterburg, Berlin theatrical star and owner of the well-known "White-Bull" (White Stage) theater, is seen starting out in her Rumber rain-drip shopped touring car for a trip to Markische Seen, a popular watering-place near the German capital.

This new auto was designed by the famous German aviator and maker of the Rumber airplane and was exhibited at the recent auto show in Berlin. The motor is located in the rear of the machine instead of the front and the complete streamline makes it one of the most attractive and speedy cars in existence.

**Testing for Leaks.**

Compression leaks in an engine are more noticeable at low than at high speed. If an engine has good compression there is a springy resistance when cranked by hand, although the best way to test the compression is by use of a gauge.

**A Beauty Hint.**

A tire that "bellies out" just above the point where it touches the ground should be inflated immediately until it is well rounded.

**You Auto Know**

That one of the chief causes of automobile fires, especially during cool weather, is "back-firing," which, in turn, is due to the mixture not being sufficiently rich in gasoline. When the backfire occurs a sheet of flame leaps from the air intake of the carburetor, and if it strikes anything of an easily inflammable nature, a serious explosion of flame is likely to result.

The collection of gasoline upon the drip-pan is one of the principal dangers in this connection, for the gas vaporizes so rapidly that, if the pan is not properly drained or cleaned at regular intervals, there is almost certain to be a sufficient mixture in the vicinity of the carburetor to cause trouble from backfire and the subsequent flame. The prevention of this risk, of course, lies in the frequent use of the choker in starting during cold weather, and also in keeping the drip-pan and the carburetor well cleaned, although fires have also been known to start from back-firing, lighting pools of oil or grease on the floor of a garage. (Copyright, 1922, by The Wheeler Syndicate, Inc.)

**OVERCOME RATTLE OF DOORS**

Effective Method Is That of Bending Hinge as Shown in Illustration Herewith.

The doors of many automobile bodies, particularly the light cars, loosen up after considerable running and cause a disagreeable rattle. Rubber-head nails, or strips of rubber cut from inner tubes, are frequently used to take up the play between the door and frame. A method that is more effective and requires a minimum of

A Simple Remedy for the Rattling of Automobile Doors Is to Bend the Hinges Slightly.

work is that of bending the hinge, as shown, using a wrench with a pad between the jaws to prevent marring the paint. The hinge so bent also assists in opening the door, the spring-like action swinging the door partly open when the catch is released. Popular Mechanics Magazine.

**TEMPERATURE IS IMPORTANT**

Point Below Boiling Point of Water Prevents Condensation and Excessive Wear.

To get the greatest efficiency from a motor and at the same time with maximum economy, it should be operated at a temperature point a little below the boiling point of water. This prevents condensation of gasoline, bad results from cold oil, and excessive wear to motor parts, not only because of poor lubrication but also because motor parts have not had the opportunity to expand properly. In other words, "hot motor" parts fit. And the motor should reach the proper temperature point as quickly as possible. For this reason radiator shutters and a motor meter are standard equipment on some cars. They insure long life and continued satisfactory performance.

**AVTOMOBILE MAINTENANCE**

- Tighten the fan belt.
- Test the wheels for wobbling.
- Examine cylinders for carbon.
- See that every moving part is well oiled and greased.
- Check up on tires and see that they are in proper condition.
- If you have not already done so, clean out the cooling system.
- Care should be exercised not to use hard water in the cooling system.

**JAMES P. HUMPHREYS**, well-known automobile man of Hebron, Md., who declares he believes Tanlac is the best thing to overcome stomach trouble and run-down condition. States it completely restored his health.

"I believe in giving everything its due and I want to say right now I just can't praise Tanlac too highly for what it has done in my case," declared James P. Humphreys, proprietor of the Hebron Motor Co., Hebron, Md.

"For three years or more I suffered from indigestion. After eating I would feel bloated with gas and my heart would palpitate until it interfered with my breathing. I was habitually constipated and my nerves were all upset. My sleep was unquiet, I got up mornings all tired out, and I was only a shadow of my former self."

"Well, Tanlac has given me a keen appetite, stomach troubles have disappeared, my nerves have steadied down, and I have gained several pounds. Tanlac, to my mind, is the best thing ever sold for stomach trouble and run-down condition."

Tanlac is sold by all good druggists.

Signal for Anvil Chorus. "Fride teeth before a fall." "True. Which of the neighbors are you going to knock now?"

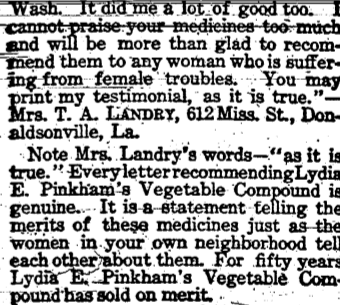

**WAS A BROKEN-DOWN WOMAN**

Then I Began Taking Lydia E. Pinkham's Medicines

Donaldsonville, La.—"I write with pleasure to praise your medicine—Lydia E. Pinkham's Vegetable Compound—which has done so much to restore my health. I was a broken-down woman until my husband brought me a bottle of your Vegetable Compound and one of Lydia E. Pinkham's Blood Purifier. For this reason radiator shutters and a motor meter are standard equipment on some cars. They insure long life and continued satisfactory performance."

Wash. It did me a lot of good too. I cannot praise your medicines too much and will be more than glad to recommend them to any woman who is suffering from female troubles. You may print my testimonial, as it is true."—Mrs. T. A. LANDRY, 612 Miss St., Donaldsonville, La.

Note Mrs. Landry's words—"as it is true." Every letter recommending Lydia E. Pinkham's Vegetable Compound is genuine. It is a statement telling the merits of these medicines just as the women in your own neighborhood tell each other about them. For fifty years Lydia E. Pinkham's Vegetable Compound has sold on merit.

**SLOW DEATH**

Aches, pains, nervousness, difficulty in urinating, often mean serious disorders. The world's standard remedy for kidney, liver, bladder and uric acid troubles—

**NATIONAL CAPITAL AFFAIRS**

To Carry Niagara Power to New York

miles from Niagara. Up to this time, Niagara power on the American side has been used principally in Buffalo and the surrounding territory as far southwest as Jamestown and Westfield, and as far east as Syracuse.

The plans were revealed when the Super-Power corporation asked the Federal Power commission for preliminary permits to develop the additional water diversion to be authorized in an amended treaty with Great Britain.

The suggested amendment would allow 80,000 instead of 50,000 cubic feet of water per second to be diverted. It is understood the same application was made to the New York State Power commission in Albany.

Another project by the company will be to make the present power canal from La Salle to Lewiston suitable for water transportation and also to allow construction of a public waterway from the upper Niagara to the lower Niagara. The state of New York already has granted permission for this route, so that private interests may be induced to bring about the construction of a ship canal around Niagara Falls on the American side. Thus it is asserted an all-American route would be furnished connecting Lake Erie and Lake Ontario, in place of the Welland canal.

# Erskine Dale Pioneer

by John Fox, Jr.  
Illustrated by R.H. Livingstone

### WHITE MAN!

**SYNOPSIS**—To the Kentucky wilderness outpost commanded by Jerome Sanders, in the time immediately preceding the Revolution, comes a white boy fleeing from a tribe of Shawnees by whom he had been captured and adopted as a son of the chief, Kahotoo. He is given shelter and attracts the favorable attention of Dave Vandell, a leader among the settlers. The boy warns his new friends of the coming of a Shawnee war party. The fort is attacked, and only saved by the timely appearance of a party of Virginians. The leader of these is fatally wounded, but in his dying moments recognizes the fugitive youth as his son. At Red Oaks, plantation on the James river, Virginia, Colonel Dale's home, the boy appears with a message for the colonel, who after reading it introduces the boy to his daughter, Barbara. Erskine Dale, Erskine Dale's other cousin, Harry Dale and Hugh Willoughby.

### CHAPTER V—Continued.

"Come, Harry." With a gallant bow Harry offered his left arm, and gathering the little Kentuckian with her left, the regal lady swept out. In the reception-room she kept the boy by her side. Every man who approached bowed, and soon the lad was bowing, too. Barbara almost cried out her astonishment and pleasure when she saw what a handsome figure he made in his new clothing, and all her little friends were soon darting surreptitious glances at him, and many whispered questions and pleasing comments were passed around. Then General Willoughby bowed with noble dignity before Mrs. Dale, and the two led the way to the dining room.

Hugh, he took place with her on the floor. Hugh came up.

"Cousin Barbara, this is our dance, I believe," he said a little thickly.

The girl took him aside and Hugh went sturdily away. Harry saw the incident and he looked after Hugh, frowning. The backwoodsman conducted himself very well. He was lithe and graceful and at first very dignified, but as he grew in confidence he began to show a zest that were new to that polite land and rather boisterous, but Barbara looked pleased and all onlookers seemed greatly amused—except Hugh. And when the old fiddler sang out sonorously:

"Gentleman to right—cheat an' swing!" the boy cheated outrageously, "cheated" all but his little partner, to whom each time he turned with open loyalty, and Hugh was openly sneering now and continually angry.

"You shall have the last dance," whispered Barbara, the Virginia reel.

"I know that dance," said the boy. And when that dance came and the dancers were drawn in two lines, the boy, who was third from the end, heard Harry's low voice behind him:

"He is my cousin and my guest, and you will answer to me."

The lad wheeled, saw Harry with Hugh left his place and went to them. He spoke to Harry, but he looked at Hugh with a sword-flash in each black eye.

"I don't want nobody to take up for me."

Again he wheeled and was in his place, but Barbara saw and looked at Harry.

"Harry," she said, "you and Barbara take care of your cousin."

And almost without knowing it the young Kentuckian bowed to Barbara, who courted and took his arm. The table flashed with silver and crystal on snowy-white damask and was trimmed with colored candles.

The little woodsman saw the men draw back chairs for the ladies, and he drew back Barbara's before Hugh on the other side of her, could forestall him. The boy had never seen so many and so mysterious-looking things to eat and drink. One glass of wine he took, and the quick dizziness that assailed him frightened him, and he did not touch it again. Beyond Barbara, Hugh leaned forward and lifted his glass to him. He shook his head and Hugh flushed.

"Our Kentucky cousin is not very polite—he is somewhat of a barbarian—naturally."

"He doesn't understand," said Barbara quickly, who had noted the incident, and she turned to her cousin.

"Papa says you are going to live with us and you are going to study with Harry under Mr. Brockton."

"Our tutor," explained Harry, "there he is across there. He is an Englishman."

"Tutor?" questioned the boy.

"School-teacher," laughed Harry.

"Oh!"

"Haven't you any school-teachers at home?"

"No, I learned to read and write a little from Dave and Lyddy."

And then he had to tell them they were, and he went on to tell them about Mother Sanders and Honor and Bud and Jack and Polly Conrad and Lydia and Dave, and all the frontier folk, and the life they led, and the Indian fights, and forced even Hugh to listen, though once he laughed incredulously, and in a way that of a sudden shot the boy's lips tight and made Barbara color and Harry look grave. Hugh then turned to his wine and began soon to look more flushed and sulky. Shortly after the ladies left, Hugh followed them, and Harry and the Kentuckian moved toward the head of the table where the men had gathered around Colonel Dale.

"Yes," said General Willoughby, "it looks as though it might come."

"With due deference to Mr. Brockton," said Colonel Dale, "it looks as though his country would force us to some action."

They were talking about impending war. Far away as his wilds were, the boy had heard some talk of war in them, and he listened greedily to the quick fire of question and argument directed to the Englishman, who held his ope with such sturdiness that Colonel Dale, feeling the heat might become too great, laughed and skillfully shifted the theme. Through hall and doorway came now merry sounds of fiddle and banjo.

Near a doorway between parlor and hall sat the fiddlers three. Gallant bows and dainty courtship, and nimble feet were tripping measures quite new to the backwoodsman. Barbara nodded, smiled and after the dance ran up to get him to take part, but he shook his head. Hugh had looked at him as from a superior height, and the boy noticed him frowning while Barbara was challenging him to dance. The next dance cleared his face and set his feet to keeping time for the square dance had, of course, reached the wick.

"I know that," he said to Harry, who told Barbara, and the little girl went up to him again, and this time

vivid pictures etched on a day and the grim background that had hitherto been his life beyond the hills. From pioneer habit he awoke before dawn, and for a moment he sat up, but he could smell the dawn and he started to spring up. He felt hot and sufficed, though Harry had put up his windows, and he could not go out in the heavy dew. He took off his coat and fragile shoes he had taken off, so he slid into his own buckskin clothes and moccasins and out the still open front door and down the path toward the river. Instinctively he had picked up his rifle, bullet-pouch and powder-horn. An hour later he looked back on his own tracks.

At the front door Harry hailed him and Barbara came running out.

"I forgot to get you another suit of clothes last night," he said, "and we were scared this morning. We thought you had left us and Barbara there nearly cried." Barbara blushed now and did not deny.

"Come to breakfast," she cried.

"Did you find anything to sleep?" Harry asked.

"Nothing—but some squirrels," said the lad.

Then Hugh came in pale of face and looking rather ashamed. He went straight to the Kentuckian.

"I was rude to you last night and I owe you an apology."

He thrust out his hand and awkwardly the boy rose and took it.

"And you'll forgive me, too, Barbara?"

"Of course I will," she said happily, but holding up one finger of warning should he ever do it again. The rest of the guests trooped in now, and some were going out on horseback, some for a sail, and some visiting up the river in a barge, and all were paired off.

"I'm going to drive Cousin Erskine over the place with my ponies," said Barbara, "and—"

"I'm going back to bed," interrupted Hugh, "or read a little Latin and Greek with Mr. Brockton. There was impudence as well as humor in this, for the tutor had given up Hugh in despair long ago."

Barbara shook her head.

"You are going with us," she said.

"I want Hugh to ride with me," said Colonel Dale, "and give Firefly a little exercise. Nobody else can ride him."

The Kentucky boy turned a challenging eye, as did every young man at the table, and Hugh felt very comfortable. While every one was getting ready, Harry brought out two foals and two masks on the porch a little later.

"We fight with those," he said, pointing to the crossed rapiers on the wall, "but we practice with these. Hugh, there, is the champion fencer," he said, "and he'll show you."

Harry helped the Kentucky boy to mask and they crossed foils—Hugh giving instructions all the time and holding approval.

"You'll learn—you'll learn fast," he said. And over his shoulder to Harry:

"My, his wrist is as strong as mine now, and he's got an eye like a weasel."

With a twist he wrenched the foil from his antagonist's hand and clattered it on the steps. The Kentuckian was bewildered and his face flushed. He ran for the weapon.

"You can't do that again."

"I don't believe I can," laughed Hugh.

"Will you learn me some more?" asked the boy eagerly.

"I surely will."

A little later Barbara and her cousin were trotting smartly along a sandy road through the fields with the colonel and Hugh loping in front of them. Firefly was a black mottled some gelding. He had reared and plugged when Hugh mounted, and even now he was champing his bit and leaping playfully at times, but the lad sat him with an unconcern of his capers that held the Kentucky boy's eyes.

"Gosh," he said, "but Hugh can ride! I wonder if he could stay on him bareback."

"I suppose so," Barbara said, "Hugh can do anything."

Many questions the little girl asked—and some of the boy's answers made her shudder.

"Papa said last night that several of our kinsfolk spoke of going to your country in a party, and Harry and Hugh are crazy to go with them. Papa said people would be swarming over the Cumberland mountains before long."

"I wish you'd come along," Barbara laughed.

"I wouldn't like to lose my hair," "I'll watch out for that," said the boy with such confident gravity that Barbara turned to look at him.

"You believe you would," she murmured. And presently:

"What did the Indians call you?"

"White Arrow."

"White Arrow? That's lovely. Why? I could outrun all the other boys."

"Then you'll have to run tomorrow when we go to the fair at Williamsburg."

"The fair?"

Barbara explained.

"Dave Vandell," added the stranger, smiling and taking off his cap.

(TO BE CONTINUED.)

### DIFFERENCE IN SPEED OF FINGERS

Those of the Right Hand Quicker and More Accurate Than Those of the Left.

The fingers of your right hand are quicker and more accurate than those of your left, says the Popular Science Monthly. The ring finger of your left hand shows a burst of speed when ever it can work with the forefinger of your right hand; and it slows down noticeably when it must team with the middle finger of your left hand.

Two fingers working together are faster than one gets it alone. And a combination of two fingers on opposite hands is faster than two fingers on the same hand.

Practice, while it increases the speed of all fingers, tends to increase the rate of the slow ones more than the fast ones, thus overcoming the handicap of the ones that lag naturally.

If you are a typist or pianist, perhaps you have already discovered some of these facts about the workings of your hands. They were conclusively demonstrated by a series of tests conducted at the Carnegie Institute of Technology by Esther L. Gatewood.

Even impossibilities are possible.

### DECLINE IN HORSE RAISING

Decrease Since 1915 of About 60 Per Cent in Number of Stallions in Service.

(Prepared by the United States Department of Agriculture.)

If comparative figures from 14 of the leading horse-producing states can be taken as showing the tendency in all parts of the country, there has been a decrease since 1915 of about 60 per cent in the number of stallions in service in the United States. Grades, cross-breeds and scrubs have been falling behind at a greater rate than the purebreds, the latter decreasing a little less than 50 per cent.

These statements are based upon a report, "Station Enrollment of Stallions Related to Horse-Raising Situation," just compiled by the United States Department of Agriculture from reports from 18 of 24 states having stallion-enrollment laws.

There has been a decrease in the total number of stallions and jacks every year since 1915, but the date of decline slackened somewhat in 1921. Fourteen states having an enrollment of 46,121 stallions in 1915, had only 18,002 in 1921, a decrease of 60.8 per cent. Of the stallions in 18 states in 1921, 74.2 per cent were purebred. In 1915, only 60 per cent were registered sires.

As the numbers decrease the quality improves. Farmers are finding that it pays to raise only good horses and mules.

The number of stallions of the light breeds has been decreasing more rapidly than the number of draft stallions. The total of jacks has been increasing gradually until the last year, when there was a slight decrease. There has been a striking increase in the actual number of purebreds. The change in the ratio of jacks to stallions is a fairly accurate measure of the popularity of the male. Twenty-nine per cent of the total number of stallions and jacks enrolled for public service in 15 states in 1921 were jacks, while in 1915 only 9.8 per cent were jacks.

Several states have recently enacted enrollment legislation that should lead to further improvement of breeding stock and the general run of work

Purebred Stallions of Size and Quality.

### BALANCED FEEDS MAKE MEAT

With Suitable Rations and Careful Supervision Farmer Should Make Hogs Pay.

There is no place on the farm where it will pay the farmer for keeping his weather-eye peeled, and his think-tank active, as when he is feeding his domestic animals. Balanced rations will help to turn coarse feeds into high priced meat products, but along with balanced rations must go balanced personal supervision. With both, the farmer who can't make money raising hogs in these days has something to learn.

### GIVE PIGS PLENTY EXERCISE

Animals Given Pasture Range and Plenty of Exercise Will Be Sturdy and Healthy.

Pigs that are shut in small, dry yards do not do as well as those that have pasture range. A pig that has plenty of exercise may not be quite as fat as his shut-in relative but he will invariably be much sturdier and healthier.

### Lack of Protein

The lack of protein causes animals to shed their hair late in the spring, and causes them to fatten slowly during the early pasture season. The feeding of straw likewise causes this condition.

### Good Mixture for Lambs

Lambs should begin to nibble at grain when about two weeks of age. A good mixture is ground corn two parts, crushed oats two parts, linseed meal one part, wheat bran one part.

### American Hog Feed

Corn is the great American hog feed, and corn and hogs go together by a kind of universal ratio of all-the-corn-a-fellow-can-grow, to all-the-hogs-a-fellow-can-feed.

### Economic Producer

The pig is the most economical producer of flesh where suitable feeds are cheaply grown.

### Encourage Pigs to Eat

It is important that pigs be encouraged to eat grain as soon as possible.

# Don't be Penny Wise and Pound Foolish

Don't think because you can get a big can of Baking Powder for little money that you are saving anything.

## There's Only One Way to Save on Bake-Day

### USE

# CALUMET

## The Economy BAKING POWDER

It costs only a fraction of a cent for each baking.

You use less because it contains more than the ordinary leavening strength.

### BEST BY TEST

## The World's Greatest Baking Powder

### Just So.

"Why were you exceeding the speed limit?"

"Judge, I was taking a visiting friend to the station."

"Guess I can't fine you, then. We are told to speed the parting guest."

Judge.

### The Joke Market.

"Your thick culture is on the decline?"

"Yes, we get very few jokes out of relativity."

### YOU CAN WALK IN COMFORT

If you have any foot trouble, Allen's Foot-Ease, the Antiseptic, Healing powder for shoes that pinch or feet that ache, takes the friction from the shoe and gives relief to corns and bunions, hot, tired, swollen, swollen feet. Ladies wear shoes one size smaller by shaking Allen's Foot-Ease in each shoe.—Advertisement.

### The Reason.

Henry is a thrifty sutor, and the whole family of his "girl" know so, too. Occasionally the brothers wish to twit him about his thriftiness, but their sister has forbidden them doing so, and they have to keep still.

But the other night too good a chance came for Knight-to-tilt-it. It was raining, and Henry drove his car into the garage, and entering the house, said: "I don't know of a sound that is more musical to me than the rain pattering on the roof."

"It surely is some contrast to the noise of the gasoline sizzling over your motor," one of the brothers flushed back, "and a more comforting one, too."

### Really Not Her Fault.

A ducky and his sweetheart, followed by three pekaninnies, applied to the clerk of a southern courthouse for a license to wed.

The clerk eyed the assemblage doubtfully, whose children are these?" he asked.

"They our's," was the ready response from the man.

The clerk was scandalized being new at his post. "You ought to be ashamed of yourself waiting to get married till you have a family, half grown."

"Judge, you'll have to excuse dat," interrupted the "bride," sweetly, "De roads out our way, is so bad!"

In 1950.

"I saw a pedestrian on the road yesterday."

"What? A live one?"—Life.

### A Failure.

Sub—"Jack would make a poor varsity catcher." Deb—"Why so?" Sub—"He couldn't even hold me last night."

Dish washing being hateful, why isn't it done by itinerants, like lawn mowing?

### Why is most of the bread cast upon the waters, stale?

Fat and flusiness can both be walked off.

## Western Canada Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available on easy terms

**Fertile Land at \$16 to \$30 an Acre**

land similar to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—oats, barley and flax also in great abundance, while raising horses, cattle, sheep and hogs is equally profitable. Hundreds of farmers in Western Canada have reaped crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

**Farm Gardens, Poultry, Dairying** are sources of income second only to grain raising and stock raising. Attractions include: good neighbors, churches and schools, good markets, railroad facilities, rural telephone, etc.

For certificate entitling you to reduced railway rates, illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, etc., write:

GRAPE-NUTS

THE HIGHEST QUALITY OF GRAPE-NUTS

GRAPE-NUTS

## Health is Wealth Itself

—and depends more upon the selection of proper food than upon anything else.

The reason is simple—the right kind of food digests promptly and is absorbed into the blood for building sound tissue; while food that digests slowly may ferment and lead to serious conditions.

Grape-Nuts—the delicious cereal food made from whole wheat flour and malted barley—is so easy to digest that even delicate people and young children thrive on it.

This is only natural, because Grape-Nuts is baked for 20 hours, which transforms and partially pre-digests the starch elements, resulting in easy digestion and quick assimilation.

Served with milk or cream Grape-Nuts is a complete food—and along with its nutritive qualities is that wonderful flavor!

"There's a Reason" for Grape-Nuts

Sold by grocers everywhere!

Made by Postum Cereal Company, Inc., Battle Creek, Mich.
