It has been said that lighting never is, strikes twice in the same spot. The remark is about the most foolish and unscientific that could be made, for the electric discharge between the earth and the clouds must find a conductor, and where a good conductor is present, there, of course, the discharge is most frequent. Iron or ironstone forms the best conductor, and the writer has known lighting to strike four times during one storm in a field where—the subsoil was ironstone, while not a tree was touched on the next property, which happened to be stiff clay.

When both chains are in position thus, the car is started and run ahead only a foot or so. This pulls the part of the chain that was tucked in under the front wheel taut and leaves some extending beyond the point where the wheel touches the ground. It also tightens up the hook end. Then it is only a simple matter of joining up the ends. Of course, it is suggested that the end on the inside of the wheel be hooked up first. This

## The Will To Save

### THERE IS NO SECRET IN SAVING.

Anyone with the will to save can save.

It simply means regularly putting aside part of one's income before any of it is spent, it means spending just a little less than is earned.

The result is well worth while. Money saved makes possible the realization of one's most cherished hopes.

The way to develop the will to save is to have an account at this bank which offers you a convenient place to safely keep the amounts you save from week to week.
