MICHIGAN MIRROR (continued from page 1)

The use of machine milkers and in multi-grass food for dairy cows. One Wisconsin program, covering a number of years, went into the field only one season when cows were fed supplementally on grain.

Perhaps the most significant observation made by Hayslett, as we viewed it, was this statement: "One book on agriculture, written during the war, has enjoyed a sale of 500,000 copies, mostly to city dwellers. Urban residents are becoming more interested in agriculture."

Why this revived interest in agriculture? The urbanite has been memories of the 1930-1939 depression. Ownership of a few acres of land, cultivated part-time to supply vegetables, fruit, milk and possibly meat, offers a buffer of self-sufficiency against the threat of want during hard times.

The agrarian has just discovered that fully a quarter of our good agricultural soil has been wasted and ruined by erosion of rain and wind and by extravagant, reckless exploitation of soil fertility. He faces the prospect of another quarter of the land being destroyed unless remedial action is taken at once.

Both of them, consumer and producer, are motivated by a yearning for security in a postwar world torn by confusion and fear. If agriculture is to be the historic base of any nation's prosperity, then the problem becomes more and more personal to more and more of us. That's why we went to Lapeer, and why we believe Michigan should take a thoughtful interest in the future of our land and its use.

HAPPINESS is founded on Good Health

He who possesses Health has the roof of which Happiness is made. The wonders of science, the miracles of medicine as far as your command. Sunnambent through the counsel and care of your physician. Call on him at the time of illness. And then, bring his prescriptions here for careful compounding.

WHIPPLE DRUG STORE

For Sale - Four year old light bay gelding saddle horse. J. F. Reule, phone 2642.

LOOKING AHEAD - GEORGE S. RENSON, President - Faculty - Michigan State College.

Fixed Laws - Economic laws are laws of nature. They are divine laws in the same sense that the law of gravity is a law of God. Such laws were in force long before the first man-made statute was ever written.

Under natural law, every producer earns a profit when he serves the public well; takes a loss when he serves the public poorly. When manipulators, government planners or any other kind, use artificial price controls, they violate natural law. It makes no difference whether the aim is greed or to protect "farm pockets" from loss. Price controls encourage incompetence.

Wheat Price Parity - Claude R. Wickard, Secretary of Agriculture, recently told an audience of wheat growers in St. Paul that U. S. production last year was 1100 million bushels compared to 800 million in a typical prewar year. This is deemed to forecast a postwar over-production of 100 million bushels or more a year. There is a law compelling government to hold up wheat prices for two years after the war.

Business men can understand government figures, interpret them and apply what they have learned. Figures from the Department of Commerce and the Census Bureau have benefited many industries in the past, interpreted by statisticians in the employ of trade associations. If wheat is over-produced one year, bread will be cheap. The next year, wheat men can plan more cautiously.

What did the cotton subsidy do but open the gate for rayon to storm the cotton planter's market? A fictitious wheat price can only bring that industry some similar calamity.

It is bad enough to have loyal citizens taxed without mercy to build a false price structure; worse when you know that the result will be to lift a big essential industry off its economic foundation and permanently cripple it.

WE CAN JUSTLY sing praises to the heroic exploits of the airman; we can glory in the hard hitting shells of the artillery, and the derring-do of the tank; we can marvel at the skill and resources of the engineers, but it is the infantry that really wins the war. The fiercest, the tank and the engineer are but preparatory. It is when the weary, heavy, mud-caked feet of the G. I. Joe of the infantry have been implanted on a battlefield and Robert Way of Iowa are guests of their parents, Mr. and Mrs. O. M. Way.

There is an insomiable way: Leave each industry's problem for men of that industry to solve. Using what is an example, let the Department of Agriculture to prepare such data as Mr. Wickard give the farmer and another to figures available to the whole industry. Let the farmers use their own judgment in the light of the facts. They will do a better job than government men, and it will not cost the taxpayers anything.

One advantage is obvious: Men of an industry can consider an industrial problem unclouded by a dust storm of political considerations. Government's proper function is to serve the citizen. Government can get statistics more conveniently than an organization of business men, and government experts undoubtedly can offer valuable interpretations, but interference is not help.
