CHICK CHECK
THERE'S no feeding quite like the energy feeding you get from Bolus Kao-Strep... for profitable pullets

HEALTH CHECK
Do you thoroughly clean and scrape the house, then wash the feeders and fountains and disinfect the whole brooder house and equipment with a good disinfectant... without a good disinfectant, but disease will catch up sooner or later.

HEAT CHECK
Do you run your brooder stove for a day before chicks arrive, adjusting it to 90° with the thermometer bulb 6 inches from their backs to warm, resulting in under-activity and poor feed consumption. A small, constant flow of air also is important. Reduce the temperature 5° per week down to 60°.

GROWTH CHECK
Do you feed the best starter available in your area? Because it makes such fast growth. And better growth means more weight gain in all it takes to turn a little chick into a fully feathered 2 1/2 week old chick. Then only 2 to 7 pounds of a good supplement, and the chick is ready to go to the laying house.

EQUIPMENT CHECK
Have you planned for at least 15 square feet of floor space for each 100 chickens? If you are buying feeders, you should have 100 chicks able to drink water from 2 to 3 gallons.

66% of dairy farmers reported calf scours in the PAST YEAR!

57.5% of calf deaths occurs in WINTER!

31.4% of calf deaths due to disease is caused by SCOURS!

To Beat These Statistics:
BOLUS KAO-STREP with VITAMIN A
(Dihydrostreptomycin Sulfate with Kaolin, Pectin, Alumina and Vitamin A)

Most dairy farmers don't need statistics to drive home the financial threat of calf scours. They do know, however, that they can rely on the effective, proved formula of Bolus Kao-Strep with Vitamin A to cut losses, secure profits!

Why? Because Bolus Kao-Strep provides Streptomycin to kill the calf scours "germ"; Kaolin, Pectin and Alumina to coat, soothe and protect the irritated intestinal lining; and Vitamin A to increase the animal's natural resistance to infection—to promote rapid healing of damaged intestinal walls and speed recovery.
