

# The Most Innovative Companies in Michigan

The Michigan Innovations Index was created for the web publication Crain's Detroit Business by Ocean Tomo, LLC. The index is based on patent applications filed by companies. Each patent is given a value relative to a median score of 100, based on analysis of about 50 factors including references to past patents, the number of citations and references made in subsequent patents, presence or absence of limiting claim language and likelihood a company will seek to renew or defend the patent it obtained.

## The Greater Detroit Area
