From this, anyone would guess that Timothy could be used for winter games

pitches.

Holcus lanatus (Yorkshire Fog): in America, known as "velvet grass", but is greatly reckoned to be a weed of turf. How it got the name Yorkshire Fog I do not know, but holcus is the old Latin name for a kind of grain and lanatus means "woolly", referring to the hairy leaves, or possibly to the softness or woolliness of the grass.

Anthoxanthum odoratum (Sweet Vernal): at one time included in seed mixtures for hay because of its fragrant smell. The presence of a substance called coumarin gives the plant this characteristic scent. However, it does not taste so good. Anthoxanthum from anthos, a flower, and xanthos, yellow;

Odoratum, sweet-smelling.

Festuca rubra commutata (Chewing's Fescue): a Mr Chewings first sold this seed in New Zealand. Although this is considered to be one of the first grasses for turf purposes, it is interesting that Festuca is the old Latin name for a weedy grass (probably not much good for sheep or goats!). Rubra, red, describing the colour of the spikelets, and commutata, change or alteration. The varietal name of this grass until recent years was Fallax—a Latin word meaning deceitful or false, so it would suggest that it is hard to pin down!

Deschampsia flexuosa (Wavy Hair Grass): this is named after a French naturalist, Mr M. H. Deschamps; flexuosa, wavy, a good description of

the flowering branches.

Nardus stricta (Moor Mat grass): the leaves of this species are very hard and brittle, with a lot of vegetative shoots closely packed on short rhizomes. Nardus, from nardos the Greek name of an aromatic Indian plant, and stricta, constricted, referring to the shoots packed together.

Incidentally, I like my own botanical name, *crataegus*. The common name Haw means hedge, referring to its use

in hedgemaking.

But *crataegus* comes from the Greek **Kratos**, increasing toughness with age.

I may not be so tough as I used to be, but I like to think I am!

With grateful acknowledgements to the "Groundsman."

N.A.G. EXHIBITION

Stand 56, Avenue G BERK LIMITED

Three New Products from Berk

Berk will introduce among other new products at the 1969 N.A.G. Exhibition a new Top Dressing comprising sand, sterilised soil and granulated sedge peat. It is packed in heavy-duty polythene bags for easy storage and application. Winter Outfield Granular Hardener. This new product is non-organic and easy to apply with accuracy. Its formulations make it particularly suitable for strengthening the resistance of grasses on golf tees to heavy wear during the winter.

FLYMO HIGH WORK RATE MACHINES AT MOTSPUR

Flymo air-cushion mowers, now firmly established as standard machines for local authorities, and the Toro range of high work-rate mowers will be featured by Flymo Limited of Watford on their Stand at the Motspur Park Exhibition of the National Association of Groundsmen on September 16.

PARK PROFESSIONAL HAND SPRAYER

(See illustration Page 13)

T. Parker & Sons (Turf Management) Ltd. announce the introduction of the PARK PROFESSIONAL HAND SPRAYING MACHINE ideally suitable for use on Golf Greens, Cricket Tables, Bowling Greens, etc.

The machine has been purpose designed for the professional and embodies design features likely to appeal to this type of user. These

include:—

1. A 7-gallon capacity tank fitted with drain plug;

2. Instantaneous on/off finger-tip con-

Balloon type tyres to minimise damage to turf;

 Low volume and high volume booms enabling the machine to handle selective weedkiller and wormkiller;

Quick release filler cap giving perfect seal when screwed down;
