

that at a standard application of 35g fertilizer per square yard, at least 10 units of IBDU are required in the product formulation to achieve truly extended turf growth and colour response. The chart Fig. 1 shows the reaction of IBDU as compared with a conventional release fertilizer.

Figure 1

The dotted line shows the release pattern for conventional, rapid release fertilizer which releases to peak after about three weeks and eventually runs out after about eight weeks."

"The dashed line shows the release pattern of IBDU. This takes about three weeks to start working and then releases to give a twelve week release."

"Conventional fertilizers release quickly and have a shorter life. Pure conventional release has a longer life, but a delayed start."

"The ideal is shown by the continuous line. This is a mixture of rapid and

controlled release. Fisons Greenmaster Super N contains 50% controlled release fertilizer in the form of IBDU and 50% rapid release fertilizer so giving the ideal release pattern."

NEW DEVELOPMENT FOR STA-BRITE

Sta-Brite, who have just moved from Farnborough into a newly fitted-out freehold warehouse and office complex in Basingstoke, are sole UK distributors for Schweizer Fertilizers. This unique range of time-proven formulations is geared to specific turf problems, with golf courses very much in mind.

In all there are 10 granular fertilizers, one to suit every type of sports turf whether in good condition or poor and on every type of soil. Of these, Nitro-green-32, Certoplant Golf, Sport-Green Golf and Turfextra Golf, are micro-granulated to under 1mm and suit the finest turf on golf greens, while the others are fine-granulated to between 1 and 2.5mm for golf tees and fairways.

Schweizer Fertilizers are based on blends of top quality Nitrogen sources, including IBDU and UF for slow release and organics for faster action, plus well balanced P, K and Mg content and essential trace elements.

Certoplant is worthy of special mention as the international best seller and a totally unique product which improves the penetrability of the soil via silica and ion exchanges, thus stimulating root growth. It is recommended for combatting a variety of turf problems and is ideal both for pre-seeding and maintenance.

BASF SPECIFIED FOR SAND GREEN CONSTRUCTIONS

BASF, the German chemical giant, produce a range of slow release fertilizers in the UK under the Floranid label. The Floranid Turf, 20:5:8 with 2% magnesium is specially suitable for the pre-fertilization of sand green constructions and a number of golf course constructors are advising and specifying its use.

A 36hole complex at Calverton due to open in April has specified the product, as well as 18 holes under construction at the Marlwood Golf Centre, near Bristol and it is being used by Southern Golf with their construction at the new Denham Court golf course, to the north-west of London Airport. As well as the general purpose Floranid NPK 15.9.2, used as an economical turf fertilizer for low intensity areas, there is Floranid NK

14:0:9.3 for fine turf application, requiring potassium and nitrogen, but where there is an adequate level of soil phosphate. The usual recommended use is with Floranid N providing an ideal balance between the quick and slow acting nitrogen.

ROFFEY INCREASE COMPOST PRODUCTION

Roffey Brothers Ltd. will be concentrating on further refinement of their extensive range of quality composts which are widely used in the Horticultural, Landscape and Sports Turf industries.

With demand for their products increasing dramatically, Roffey Brothers Ltd. produced over 25,000 tonnes of sports turf dressings and golf green construction mixes last year. The company has now established an enviable reputation for consistently high quality products.

During 1990, major investment will be made in additional bulk handling and packing capacity, whilst further quality control systems will be initiated to ensure that the high standards are maintained.

The company manufactures a standard range of RBL XYLORGANIC, but specialises in producing specific formulations, based on the results of soil analysis, to suit the individual greenkeeper's requirements.

As all sports turf dressings manufactured by Roffey Brothers Ltd. are screened to 3mm this has enabled greenkeepers to make lighter, more regular applications of dressings containing major nutrients, trace elements and soil conditioners, which are readily assimilated into the turf structure giving more even growth patterns and true surfaces.

Five years ago, they introduced RBL XYLORGANIC fine turf dressing, a unique product which has become an established favourite with many

greenkeepers. The combination of three soil conditioning materials, including seaweed, a wide spectrum of trace elements and a sand which is produced to a very tight particle specification, has resulted in a dressing material which helps the greenkeeper combat the severe effects of compaction caused by the pressures of modern, all year round play and maximises the availability of nutrients from applied fertilisers.

As a result of the analyses the specification of RBL XYLORGANIC will be altered slightly to adjust the relative ratios of the trace elements to increase the proportions of Magnesium and Sulphur.

It has been found that, although many fertiliser manufacturers are including Magnesium in their products, the rates of incorporation are only sufficient to replace that normally lost during normal growth and mowing operations. If soil reserves are seriously depleted, it seems to be more effectively applied in the top dressing, particularly after tining operations.

MELCOURT'S DEDICATED TOP DRESSINGS AND SOIL CONDITIONERS

Choosing the right formula top dressing is a vital factor in grasscare generally, and the golf course is no exception. Melcourt Industries, specialist suppliers of organic landscaping products, have three ready-mixed top dressings, each dedicated to a specific application, which will enable the groundsman to maintain a firm, fertile and well conditioned surface.

HR top dressing is specifically formulated for use in higher rainfall areas, allowing free drainage while providing a good buffer of top quality loam, to encourage grass growth. On the other

hand, LR top dressing should be used where water retention is desirable, in lower rainfall areas for example and is a particularly good choice for playing fields and amenity areas.

Finally, Melcourt's HT Sports is a high quality top dressing created specifically for golf courses and bowling greens, where a free draining yet thatch resistant surface is required.

In each case, a high humate content works together with a high action exchange factor to help the long-lasting release of nutrients and encourage growth.

All three Melcourt top dressings are 100% organic and of a completely consistent formulation. This means the greenkeeping professional can rely on achieving the same firm, fertile and well conditioned surface next time round, without having to put up with unpredictable fluctuations in quality and mix. For the groundsman who wishes to mix his own, Melcourt will supply loam and other ingredients to suit individual requirements.

Melcourt also produce soil conditioners, such as Adheart, Super Humus and Composted Garden Bark. Adheart is a high humate concentrate which enhances the texture and structure of the soil by improving drainage and breaking down clays, and is ideal for golf and bowling greens. Its movement through the soil stimulates growth at all levels, particularly the root zone.

Super Humus is ideal for giving impoverished soil an instant enriching humus boost, while Composted Garden Bark, processed from conifer bark, will enhance fertility, improve drainage and stimulate healthy root growth in all types of soil.

All Melcourt's products are distributed nationally in either bagged or bulk form, with "walking floor" trailers available for uneven sites or where storage space is a problem.

FARMURA LAUNCHED
'ZORBIT' THE NEW
TURF WETTING AGENT
FORMULATED
SPECIFICALLY FOR USE
ON FINE TURF

RESULT: GREENKEEPERS VERY PLEASED. COMPETITORS NOT PLEASED AT ALL!

STONE HILL, EGERTON, ASHFORD, KENT, TN27 9DU. TELEPHONE (023 376) 241/581

ZORBIT
WETTING AGENT

- Promotes a healthy green turf colour
- Eliminates localised dry spots before they occur.
- Relieves soil compaction in heavy wear areas
- Encourages a more uniform movement of water through the soil profile
- Stimulates and maintains deeper rooting

6 LITRE easy dispenser pack

FENDRESS®

THE TRULY NATIONAL TURF TOP DRESSING AS SUPPLIED TO MANY CHAMPIONSHIP COURSES FOR OVER 10 YEARS

A superior and consistent golf green top dressing prepared for the professional using the highest quality East Anglian fensoils (with very low clay and silt fractions) which are blended with lime free silica sand, shredded and screened, ready for immediate application.

Save capital outlay on expensive equipment, which can stand idle for long periods, also labour costs, but most important of all, save the difficulty of finding suitable raw materials which are essential to produce a high quality top dressing.

Bulk deliveries to all parts of the UK, including Northern Ireland in 10-25 tonne loads. Also pre-packs for easy handling. Special mixes prepared to your own specification.

Remember, there is only one true FENDRESS®. Beware of imitations.

Also available, granulated Sedge Peat (Fenpeat), screened loam, specialist yellow or white bunker sands, grit/dried sand for vertidrainage.

LIQUID FERTILIZERS FROM FARMURA

The Farmura Flo-Gro range of high quality liquid fertilizers represents a completely new and revolutionary approach to turf nutrition. Specially formulated for use on turf following a successful national commercial users trial programme Flo Gro liquid fertilizers offer the professional greenkeeper, groundsman and landscaper an advanced range of exciting products providing an effective, safe and simple alternative to conventional fertilizer applications.

Flo-Gro range offers the modern turf manager liquid fertilisers in a combination of nutrients that are designed to suit a wide range of situations. Some of the Flo-Gro products contain "Didin Fluid" the slow release nitrogen inhibitor which phases the amount of nitrogen available to the plant.

These liquid fertilisers eliminate unsightly powder and granule residues and mower 'pick-up' on fine turf. Formulated as liquids Flo-Gro ensures more accurate and simple measuring and application can be combined with pesticide and other liquid turf care products.

Initially six Flo-Gro products will be available for use on turf and each is packed in 20 litre plastic containers, each product is colour coded to ensure easy recognition.

Farmura is well known for its role in pushing the introduction of environmentally safe turf management products for greenkeepers, have now taken on a new roll.

The 'Turf Iron' is a one man operated self propelled machine utilising a unique three roller system, each one being three feet wide, that gives putting greens a look that they have just been 'ironed' without, the manufacturers claim, any compaction.

Advantages gained by using the 'Turf

Iron' are faster, more even greens, longer life for mowing machines by not having to cut as low and better control of moisture content.

The 'Turf Iron' is powered by a Honda engine and very simple to operate using only two foot pedals and handle bars

to manoeuvre the three 36" x 41/2" rollers. The complete unit comes with its own roll-on-roll-off trailer fitted with heavy duty tyres. At the ideal operating speed the 4-5 mph an average size golf green of 600 sq. yds. will take about ten minutes.
