

All in a day's work

for the HYDROMAIN

10 minutes to deep slit a green, 5 minutes to spray it, 15 minutes to spread a ton of top dressing, accurately. Just three of the impressive time saving features of the Hydromain System – and there's a range of around 30 different implements for just about every turf maintenance job on the course – all saving you time and effort.

There's a choice of tractor unit too – 14hp or 20hp, with or without safety cab, petrol or diesel engine. Unique patented weight transfer system applies downward pressure without extra weights.

The Hydromain System has been designed and manufactured in Great Britain specifically for European conditions, but is performing superbly also in Middle Eastern and Far-East locations.

Join the growing band of Hydromaniacs – there are now well over a 1000 Hydromain Systems helping to maintain the finest sports surfaces.

Write or 'phone today for a fully illustrated leaflet or demonstration.
