

NEW

- Increase in slow release nitrogen content
- Plus two new formulations

MASCOT MICROFINE

The first choice for a champion playing surface

A slow release fertilizer produced after exhaustive trials and discussions with course managers, greenkeepers and groundsmen. As part of our policy of continual improvement to the quality and dependability of the Microfine range, our latest tests have led us to improve the product in two distinctive ways.

The I.B.D.U. slow release nitrogen source has been substantially increased across the range, plus the addition of two new formulations.

The range is now as follows:- 14:4:7 –
12:0:6+2% Iron – 8:0:0+2% Iron – 8:0:0+4% Iron –
18:0:0+6% Iron – 4:10:10 – 4:0:8+2% Iron.

Rigby Taylor wish you success with the new product
