Sports, Amenities, Landscaping

3-5 September '96 Royal Windsor Racecourse

Over 370 exhibitors have booked their places at the SALTEX 96 show 3-5 September, at the Royal Windsor Racecourse.

"Space at SALTEX has been in increasingly high demand since the show returned to Windsor two years ago," said Jon Gibson, the SALTEX Event Manager. "Space for last year's show sold out, with over 380 exhibitors covering close to 50,000 m², which was a 12% increase over 1994. In fact, only the construction industry can boast a bigger trade show in the UK'.

According to Jon Gibson, "Stand sales this month have been buoyant, and SALTEX '96 is now set to beat last year's record-breaking success." Some of the companies recently signed up include JCB, which has increased its stand size this year, and Renault Agriculture, a new exhibitor to the show - testimony to the strength and breadth of the exhibition.

The growth in the number of exhibitors is in part due to the dramatic increase in the number of visitors to the show, which has gone up by 250% in the last two years. Last year 14,946 visitors came to SALTEX, making it an increasingly attractive way for suppliers to meet potential customers with the power and intention to buy.

SALTEX '96, as in previous years, will bring together buyers and suppliers across the breadth of the open space management industry. One of the new features this year will be a free seminar programme, in which exhibitors at SALTEX will share their expertise in new trends and developments affecting the industry. Speakers will include representatives from Jacobsens, Charterhouse, Farmura, Sisis, Industrial Power Units and Sportsground Irrigation. "There are continual changes within our industry - it is obviously very important that the operators become aware of the latest products, services and techniques, all of which can be seen at SALTEX," commented Gibson.

For free tickets to the show, call the SALTEX ticket hotline on 01954 230710.

Steady as you go: There's lots to see at SALTEX '96

SELECTION OF EXHIBITORS

From here to Page 56 *Greenkeeper International* presents profiles of some of the exhibitors at SALTEX '96

Rufford Top-Dress Supplies - stand A19 - will be offering a new service this year at SALTEX 96. Prospective customers are invited to bring along a small sample (150 gms/50z minimum) of rootzone from their greens. Rufford will analyse the material, recommending the most compatible top dressing from its range.

Also on show this year will be a new software programme which can help design top dressing or rootzone mixes for customers.

For further details, telephone 0161 877 8550 or deliver the sample at the Rufford stand.

Hayter - Stand W14 - will be launching its latest triple turf mower, the LT324 (pictured) featuring a 4 wheel drive "on demand" system and GRP moulded body which provides an attractive, modern look to the unit. Hinged access to all major compo-

nents make maintenance easy. The machine has been developed to complement the successful LT312 which will also be on display.

Our FM514 Fairway Mower, launched last year, award winning gang units and also the Double 3 pedestrian machine which recently was awarded Best Product of 1996 by Amenity Management are among the many in the impressive line up of quality machines on show.

BIGGA - Stand G1 - brings a

strong team to SALTEX with Executive Director Neil Thomas, *Greenkeeper International* Editor Scott MacCallum, Membership Services Officer Janet Adamson and the entire Sales and Marketing Department of Sales and Marketing Manager James McEvoy, Sales and Marketing Executive Louise Lunn and the Sales and Marketing Assistant Amanda Freeman on hand to offer a warm welcome to anyone who visits the stand.

A full range of BIGGA merchandise will also be on show as well as information on Association membership and the education courses, videos and literature which is available.

There is a difference between simply grinding and sharpening mowers as visitors to **Eric Hunter Grinders Ltd - Stand R39** - at SALTEX will see.

Hunters leads the field in the method of accurate 'Relief Angle'

grinding. 'Relief' grinding is simply grinding each blade of the cylinder with a clearance angle. When performed correctly, it results in mowers that are easier to set, produce a cleaner cut and creates hardly any friction between cylinder and bedknife thus causing less wear. blades are known to last up to four times longer after being 'relief' ground.

Among the grinders being demonstrated, are its popular Jupiter and Juno machines.

Hunters well engineered products have acquired an excellent reputation over the last 25 years for a 'quality' grind and are used at numerous leading Golf and Sports Clubs, Local Authorities, Turf Grower and mower repair workshops throughout the world.

This year at SALTEX **Rhône-Poulenc - Stand P2** - will be exhibiting its extensive range of products for autumn use such as the ultimate contact fungicide, ROVRAL GREEN and the dual purpose pest management product CASTAWAY PLUS for casting earthworm and

leatherjacket control.

New to the Rhone-Poulenc total herbicide range is RESCIND. RESCIND contains 500 g/L diuron and has full CDA recommendations on the label. RESCIND is marketed through Chemlock Environmental Services.

We also have several exciting new products pending MAFF approval.

In its 50th Anniversary year, **Huxleys - Stand S9** - will be exhibiting several new products which illustrate the company's progress since it began selling the Allen Motor Scythe in 1946.

The new Huxley Teestar is an all-hydraulic ride-on triple mower for precision mowing of golf tees and greens surrounds, as well as sports-ground and amenity areas. British built, the Teestar has already been exported to Japan.

Other new products include the Soil Reliever Junior, a heavy duty deep tine aerator with 48" working width, and the Turfblazer Hydro Power 1280, which is a high performance 126" cut rotary mower with Turbo charged 61 hp diesel engine. A rear mounting ver-

sion of the popular Grainskeeper Greens Brush, for fitting to suitable tractors and turf vehicles, will also be displayed.

On the stand will be examples of the full Huxley range.

Pictured above is the new Huxley Teestar.

Supreme Mowing Ltd - Stand V15 - is renowned for its world famous range of precision built grinding machines and backlapping units and of course an extensive range of quality replacement parts for all leading grass cutting machines.

For more information and/or a free demonstration of our grinding machines please feel free to visit us at SALTEX '96.

Standard Golf (UK) - Stand P327 - will exhibit the finest range of Golf Course equipment manufactured in the USA by the world's largest manufacturer. Standard Golf offers a wide choice of colours, product and quality at affordable prices. From Japan will be the only synthetic grass Winter Tee Mat where the golfer can tee up in any position. A wide range of UK manufactured Tee information signs will be shown, made in various materials to suit every taste and budget.

Details of the ENVIROGREEN chemical container disposal services will also be available - the easy way to obey the Law.

Duncan, Paula and Andrew will be on hand with a warm welcome.

Come and talk to the experts at the **Rigby Taylor - Stand M1** - Staff will be on hand as always to offer friendly help and advice. In addition you'll also have the opportunity to meet guest experts from major manufacturers who will be more than happy to provide more specialist assistance and information.

Sports, Amenities, Landscaping

3-5 September '96 Royal Windsor Racecourse

Our stand will again offer a warm welcome and comfortable hospitality as well as exhibiting the latest products together with comprehensive reference literature.

All of us at Rigby Taylor look forward to meeting friends both old and new.

The Course Care - Stand T45 - range for Groundsmen and Greenkeepers continues to grow. Lubricants, Fuel Treatments, Equipment, Environmental Services, Clothing and Footwear all form part of the specialist Course Care range to keep the workshop fully operational. They will all be on show at Windsor.

New products for 1996 include the Greenguard non turf-burning hydraulic oil starter pack complete with a supply of flushing oil to ensure that all traditional hydraulic oil is fully flushed out.

The Course Wear clothing and footwear range covers knitwear, foul weather clothing, chain saw trousers, insulated boiler suits and much, much more.

For details and information contact John Wood, Marketing Director, on 01535 611103 or fax on 01535 611543.

Farmura - Stand E80 - will be displaying its full range of environmentally sensitive turf care and landscape products which are available throughout the United Kingdom and the E.U. from a network of specialist distributors making access to the products easy and quick wherever you are.

Of special interest with Autumn approaching, is Inhibitor for strengthening the turf against fusarium attack and Ferrosol Liquid Iron for greening and hardening the plant against disease.

With the highly successful range of Farmura Liquid Organic fertilisers, the advanced Super Concentrates, Superpaver Grass Reinforcement, Turf Irons and the winners of the Blazon Spray Indicator Draw being announced together with the usual Farmura hospitality, Stand E80 will be well worth a visit. Come and discuss integrated feed programmes with our technical staff and pick up our latest literature.

Grass Roots Construction Ltd - Stand P13 - a sister company of Grass Roots Trading Co has established itself as the cost effective solution to construction needs.

Specialising in the golf course sector a wide range of diverse services are offered. Recent projects include new build greens and tees, lakes, ponds, waterfalls, ball stop perimeter fencing as well as bespoke clubhouse barbecues. For winter considerations it can help with turfing, pathway construction and all manner of fencing. Recent growth in the maintenance market has seen a market increase in contracts for bunker maintenance and general presentation work. Whatever your construction needs you'll discover the solution is to get back to Grass Roots.

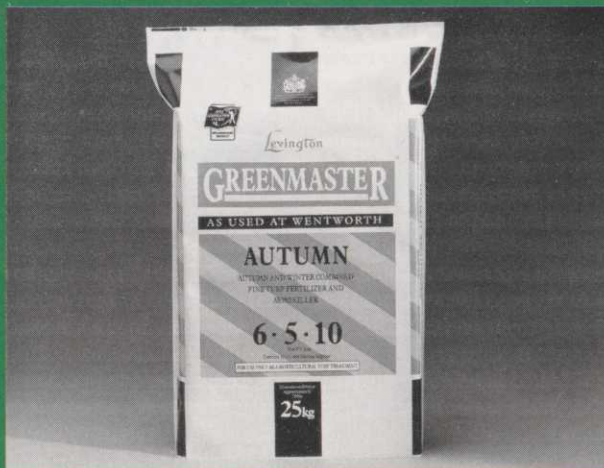

At Saltex this year **Watermation - Stand P8** - will be introducing its exciting new range of gear drive sprinklers (pictured). This extensive range covers everything from small shrub heads to long range turf sprinklers suitable for sports ground and golf courses.

Watermation has always provided reliable, high quality irrigation equipment and this new range is certainly no exception. All the sprinklers can be used as full or part circle operation by simple, visual arc adjustment without using any key. They are also vandal resistant and return to their pre-set arc even if forced out. This new range added to Watermation's world famous impact drive sprinklers give the customers a real choice.

Levington Horticulture - Stand X 11-12-13 - will be concentrating on the key products for fine turf renovation after the stresses of summer heat and physical wear on its stand at SALTEX.

Levington Greenmaster will be prominently featured on the stand, as the ideal autumn treatment for fine turf. Greenmaster Autumn contains ferrous sulphate to control moss through the autumn and winter, and has a 6:5:10 NPK formulation to help toughen the sward and improve rooting without encouraging

Greenmaster Autumn leaves the others behind

Greenmaster® Autumn is a unique five-way fertilizer for perfect autumn performance on all fine turf. The lightweight, uniform, easy to see granule ensures even coverage. It quickly breaks down for maximum efficiency and minimal pick-up.

- Provides 35kg/ha of potash to harden soft growth and prepare turf for winter.
- Low nitrogen level will not encourage disease.
- Balanced level of phosphate promotes root development and strengthens the sward.
- Contains 6% iron for moss control and colour enhancement.
- High sulphur, acidifying formula helps control soil pH.

ALTOGETHER AN UNBEATABLE COMBINATION

excessive, frost susceptible, top growth.

Ransomes - Stand V15 - will be launching a seven-unit fairway mower at SALTEX '96. Known as the Fairway 405 it is believed to offer the widest cut of any mower in its class.

Engineered for optimum performance and productivity, the Fairway 405/s seven steerable/ floating cutting heads give a maximum mowing width of 4m (158in), with selectable lift of the two outer cutting units.

Powered by a 46.5hp turbocharged diesel engine, the Fairway 405 combines the durability of heavier machines with the manoeuvrability and low ground pressure of a light-weight mower. The 405 features variable reel speed control, in-situ backlapping and robust hydrostatic transmission providing permanent four-wheel drive in work with two wheel drive for transport. The cutting units can be specified with 7 or 11 blades and all have Ransomes variable weight transfer system/ ensuring a close/ even finish over undulating turf.

Operator comfort and convenience are enhanced by the high-back suspension seat, "walk-through" platform and ergonomic control layout. Both the engine and hydraulics are easily accessible for service and the reel to bedknife adjustment can be made by hand.

Equipped with hydrostatic steering as standard and with the option of Ransomes Turf Protector hydraulic oil leak detection system, the Fairway 405 offers a cutting performance in excess of 9 acres an hour (3.6ha). Price of the machine will be announced at SALTEX '96.

Pictured is the Fairway 405.

Jacobsen - Stand W38 - is very pleased to announce the appointment

of Browns, Geo Browns Implements Ltd as Jacobsen dealer for the area of Herfordshire, Bedfordshire and some of the North London Boroughs. Browns are a well established company with depots at Chesham and Leighton Buzzard.

Browns are at this year's SALTEX show and will have on display products from Jacobsen, Kubota and Charterhouse. The area representatives covering the new Jacobsen are: Peter Hopkinson - Chesham and Steve Lee - Leighton Buzzard.

Toro Commercial Products - Stand W50 - is continuing its run of new product introductions with the announcement at SALTEX of two new mowers, a new and improved model of its Greens Aerator and a new, trailed version of the walk-behind Hydroject water injection aerator. There is also a new injection system for the Hydroject, allowing it to be used for applying wetting agents and soil conditioners.

The new Reelmaster 2600-D (pictured) is an all-purpose triplex mower for a precision cut on sports fields and

amenity areas as well as around golf bunkers, greens, tees, collars and approach areas. It features the all-new design, engine, drive, cutting units and mainframe to be found on the Reelmaster 2300-D announced last year, but is fitted with wider cutting units to give an 85-inch cut for greater productivity.

The new Greensmaster 1600 has all the best features of the well-known Greensmaster 1000 but offers a wider 26 inch cut and, for a better quality cut on tees, an extended height-of-cut range from one eighth to one-and-a-quarter inches.

Claimed already to be the fastest, most durable greens aerator about, Toro's Greens Aerator is now equipped with a state of the art Briggs & Strat-

ton, Vanguard V-Twin engine that is known for its smooth, quiet and efficient running. Other notable developments include a quadrupled fuel capacity, with a 4.5-gallon moulded tank giving up to six-and-half hours operation and cutting down on refuelling delays.

Another new aeration product is the Hydroject 4000, a trailed version of the 3000 water-injection model which, when towed behind a utility vehicle with onboard water tank, gives users the flexibility and convenience to aerate areas that are not served by a mains water supply. Typical applications include golf greens, tees, isolated dry spots and high traffic areas.

Lastly, Toro is launching a new injection system that enables its Hydroject 3000 water injection aerator to apply recommended wetting agents and soil conditioners beneath the turf's surface.

Since the **ProSport range - Stand R35** - of root zones, top dressings and sports sands was launched at Saltex 1995, two new products have been added to the range.

ProSport Green divot mix is a golf course repair product for use either by greenkeeping staff or players themselves as a more effective and almost invisible way of repairing divot marks than trying to heel in the divot. The product has been successfully tested at selected golf courses.

ProSport Equestrian sand is a specially selected grade of sand for use in either indoor or outdoor riding establishments.

At SALTEX '96 there will be ProSport experts on the stand to give advice on sports pitch construction and maintenance and the choice of base aggregates, root zones, top dressings and sports sands.

Divot mix boxes are widely used on golf courses in the USA. Replacing divots on tees and fairways is frequently unsuccessful, especially in dry weather. Using a properly formulated divot mix the success rate is much higher on the course.

Conventional divot mixes are dark in colour and 'cosmetically' do not improve the look of the repaired divot. ProSport Green uses sand which has been treated with a harmless but per-

manent green dye. This does not inhibit the germination of seed or the grow through of grass. It does not wash out and it does not stain. The mixture encourages rapid regrowth and until new grass shows through the course is not disfigured by divot marks.

Tildenet - Stand F40 - will again be exhibiting its complete range of netting products specifically designed for the Sport, Leisure, Grounds and Greens Industry.

New products on display will include the Tildenet Rugby Practice Cage, Economy Grass Germination Sheeting, The Unique Golfing Green "The Epic", Bunker Membrane and Indoor Golf, Cricket and Sport netting.

All information and literature will be available from the Tildenet and several of Tildenet products will be assembled for display and demonstration purposes.

Launched at this year's BTME, the SubAir system from **IPU - Stand W35** - has already won the Amenity Management Award for innovation.

This unique concept is designed to control oxygen, moisture and soil temperature in the root zone. It provides the plants' roots with an ideal microclimate which will ultimately result in strong healthy turf. Traditionally, all aeration has been carried out using machinery on playing surfaces which can disrupt play. SubAir uses the existing USGA drainage system to introduce air into the root zone or to extract excessive amounts of moisture, so there is no disturbance whatsoever to the surface. By circulating air, soil temperature can be regulated to provide the right growing conditions, especially during long hot or cold periods. SubAir can also be used to draw water and nutrients from the upper

century.
Used and
preferred by
Professionals.

SATISFIED CUSTOMERS:

- "Every forward thinking Golf Club should have a Juno in their workshop, a truly excellent machine." Mr. Mark Jones, Head Greenkeeper, Preston Golf Club.
- "Hunter's relief grinding is far superior to anything I have ever seen, each blade cuts true, the savings are substantial and the cost is minimal." Mr. Roger Shaw, Course Manager, Ramsdale Hall Golf & CC, Co Durham.
- "Our sole plates/bottom blades are now lasting between 2-3 times longer than when we were spin grinding." Mr. Philip Baldock, Head Greenkeeper, The Royal Portrush Golf Club, County Antrim.
- "It is the best piece of machinery this course has ever invested in, a fine machine that I would recommend to anyone." Mr. John Bashford, Head Greenkeeper of the Green Hotel Golf Course, The Kinross Estate.
- "A quality machine that gives a superb finish to our cylinders, and saves money." Mr. Derek Green, Head Greenkeeper of Royal Liverpool Golf Club.

Juno 36". Will accommodate every make and type of professional cutting cylinder and bedknife. Can 'in-situ' grind many greensmower reels. Water cooled (eliminates dust and heat), simple and fast to use, accurate 'relief angle' grinder.

YES! All these clubs are breathing a big sigh of 'Relief' - let us tell you why!

With our unique and accurate 'Relief angle' grinding method which: ● Reduces contact between cylinder and bedknife (blades can last up to four times longer) ● Reduces drag which means less friction, less fuel, less problems, less maintenance ● Makes cutting units easier to 'set' ● Blades cut cleaner and stay sharp longer.

But the biggest 'relief' is cutting service costs, reducing downtime and improving standards.

soil levels down to the root zones. While SubAir does not eliminate the need to aerate for compaction, once the soil has been opened it will control oxygen levels and remove poisonous gases such as methane and carbon dioxide.

The new Hoaf range of equipment from IPU provides effective and safe weed control without the use of chemicals.

The Hoaf Infraplus system has been specially developed and engineered to control weeds on paths, paved and firm areas. Through the combination of infrared radiation and hot air, a short burst of heat exposure destroys photosynthesis and causes interruption of sap to the root system.

At SALTEX for the first time will be the Grillo Beefly 20hp diesel model. A major feature of this new machine is the easy access to the front-mounted mower deck and chute. Grass cutting on areas where there are a number of obstacles to manoeuvre around is time consuming and not always cost effective. Grillo's Beefly zero-turning-mowers are designed for just such applications.

Visitors to SALTEX will see a new look **STRI - Stand CA11**. In line with structural and staff changes, STRI will be sporting a new corporate identity and exhibiting a fully revised range of sports and amenity turf services, training programmes and publications.

Part of these activities involve STRI's educational programme. STRI in conjunction with GTC have taken the initiative in introducing a new concept in greenkeeper training. STRI will now offer a series of short three week courses to cover the theoretical knowledge required for NVQ Craft Level 2, Amenity Horticulture (Greenkeeping). The programme will include a comprehensive manual covering all aspects of the theoretical course, written and produced by STRI. This new manual on a greenkeeper training theory, also opens up possibilities for distance learning for greenkeepers already established in their field. Details will be available at SALTEX.

New revised editions of both "The Care of the Golf Course" our best seller, and "Fertilisers for Turf" will be launched at the show. A full range of STRI publications can be seen and in

the IOG Bookshop being run during the exhibition.

It's all change at STRI for SALTEX '96.

Sports and amenity grass seed varieties and mixtures which meet the demands of today's increased usage and changing weather patterns will be the theme of **Mommersteeg International's** Saltex display - **Stand F22/23/24**.

Demonstration plots of the company's three new varieties - Amadeus, Gerona and Mocassin - together with MM60 - a special mixture for over-sowing winter games pitches with ryegrass - will form the centre-piece of the exhibit.

Mommersteeg will also be unveiling details of its re-formulated seed treatment Improved Headstart. The new formulation for this natural, non-toxic seed coating has been devised to add even greater advantages in terms of disease reduction and help for less aggressive species to gain a good start in competition with more dominant grasses.

All three new grass varieties have been bred to provide users with hard

wearing turf. Amadeus is a dwarf variety perennial ryegrass which is tolerant to dose mowing and has a high shoot density and good cleanness of cut.

Gerona was bred specifically for use on winter sports pitches and features in MM60. Mocassin is the company's new slender creeping red fescue. Another variety with good disease resistance and high shoot density.

MM60 is a mixture of four Mommersteeg perennial ryegrass varieties - Master, Gerona, Danilo and Mondial. The varieties have been chosen to provide a turf that is able to withstand high levels of wear and tear and good powers of regeneration after damage.

Mower Accessories Ltd - Stand H10/11 - is very proud to be one of the leading manufacturers of all types of bottom blades rotary blades and cutting cylinders. Since the '95 Exhibition it has increased its vast range of blades and cylinders and is developing and producing new products to customers requirements all the time.

It will be exhibiting a cross section

of products at SALTEX'96. The company's aim is, as always, high quality at low cost. 1996 is proving to be another successful year in both the home and overseas markets. We are also proving to be a leading supplier to the original equipment manufacturer.

We look forward to meeting old and new customers where a warm welcome will be given.

The new **Vitax Sport Amenity - Stand F54/55/56** - and key range product guide will be available at SALTEX '96. This incorporates for the first time the full technical information for all the sport amenity chemical range of products.

Prominantly featured on the Vitax stand will be Vitax Ultraflo, fast establishing itself as the UK's number one wetting agent. This claim has been substantiated by the results from recent STRI wetting agent trials. Complementing Ultraflo will be the full range of high quality, cost effective Vitax Amenity Products for today's discerning turf manager.

From the tee to the green **Pattis-**

sons - Stand T17 - has been able to offer quality products for 100 years. With a wide range and variety of products Pattissons offers a choice to suit any golf clubs requirements or budget.

From the tee area Pattisson's wide range starts with simple aluminium tee sign to the more popular exclusive resin tee marker. As an alternative Pattissons also offers the Newbury or Chichester Tee Consoles, which can come complete with litterbin, shoe brush, yardage information, hole layout and the concept also lends itself to allow advertising. The Royale Ball-washer made from cast aluminium and launched in 1995 is proving to be a great success. This product is also the main feature of the tee console.

For the greenkeeper comes the DewMaster II with a cleverly concealed switch tip in the handle for those places the DewMaster brush just cannot reach! This ingenious product seems to have taken the greenkeeper and groundsman market by storm and is probably the product for 1996. Another new product for 1996 is the Pattisson Holecup Extractor, which

allows a greenkeeper to remove holecups easily without bending down.

For the golfer Pattissons has small unobtrusive distance markers clearly indicating the yardage to the next hole.

The green PVC bunker rake, that was re-launched last year has been updated again, and can also be obtained with a screw fitting head and fibreglass handle, available in white and green. On the green, Pattissons has upgraded the bogey and antimud holecups, the new designs allow for a 'snug-fit' for the flagpin ferrules.

Flagpins can be ordered in a number of colour and size variations depending on the customers requirements. All Pattisson flags are manufactured in-house and again in typical Pattisson style can be produced to any specification that the customer requires.

All this and our continuing improvement to our other product lines is enabling Pattissons to remain the number one supplier to the UK market.

Bourne Amenity - Stand B42 -

will be displaying two unique products in a unique way at Saltex '96. Geoblock Grass Protection System will be laid down next to Haraden Redtrak pathway material so that the visitor can walk on both to see how effective they both are.

Geoblock is becoming increasingly popular both with golf courses and local authorities where an invisible strengthening system is needed yet grass cover is essential to make the area as natural as possible.

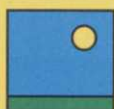

Haraden Redtrak is now well known as a hard wearing, quality pathway material which requires little maintenance and is being used by many clubs in the South East.

Bourne Amenity has an excellent reputation for an efficient delivery service of top quality products including top dressings, root zones, amenity sports sands and Symbio biological products.

GM UK - Stand H34/35 - is a company renowned for its unnovative products and idea are introducing a unique club and grip cleaning system to the UK.

BARENBRUG

33 Perkins Road,
Rougham Industrial Estate
Bury St Edmunds, Suffolk IP30 9NW
Tel: 01359 270766 Fax: 01359 271021

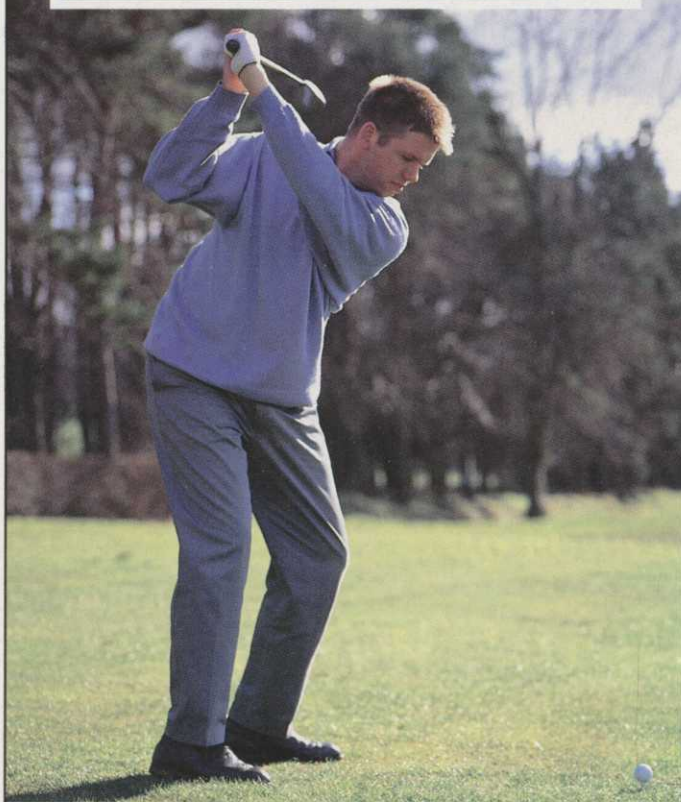

Until you've had a few scorching hot summers, the odd attack from pests or plague and a chance to calculate maintenance costs, the wisdom of your seed selection will never be known.

That's why you need the Barenbrug promise of quality.

By combining the best of tradition and technology we've created some of the best varieties around - Barclay, Bargreen, Baruba and the exciting new Barkoel and Barlinda - making them available in a range of quality mixtures that takes the guesswork out of selection.

*Putting down roots
has never been
more important*

The wear and tear your tees suffer all year round puts a premium on turf with outstanding powers of recovery. That's why you should use Medallion turf from Rolawn.

It's ferocious rooting power ensures maximum penetration - ready to play weeks, even months, earlier. And Medallion turf is ideal for repair and renewal: order as much or as little as you need.

TRY BEFORE YOU BUY: contact your local Rolawn depot for a **FREE** sample and see the difference for yourself in days. We have depots nationwide - to find your nearest, call 01904-608661 and ask for Customer Services.

GREENKEEPER INTERNATIONAL SHOW PREVIEW

SALTEX
Sports, Amenities, Landscaping
3-5 September '96 Royal Windsor Racecourse

The system cleans both the club head and the grips in about two minutes by using ultra sonic waves in water. It removes dirt and grease revitalising grips and cleansing the grooves to ensure that maximum spin is imparted on the ball.

The success of the GM sonic cleaner is that it combines an excellent service for the golfer while creating important revenue for the club. Demonstrations are free and please call the office on 01704 571271 or visit the stand.

Star attraction on the **Kutoba** stand - **Stand W40** - is its new range of tractors. Following months of field trials and end-user research, the new tractors look set to further strengthen Kubota's dominance in the compact tractor market.

Also featured on the stand are the latest Kubota "F" series out-front mowers, the 25hp F2560 (pictured) and the 30hp F3060. Both these units were launched earlier in 1996 and are making strong impact in the contractor sector.

Other tractors on the stand include the three Grandel machines in the 35hp-45hp class and a line up of attachments including backhoe loaders, grass collectors, trailers, rotary and flail mowers.

Shropshire-based golf course equipment manufacturers, **Links Leisure - Stand E60** - will be showing off not only its now well-established PRO-TEE all-weather golf mats at this year's SALTEX but also its latest range of golf driving bays and attractive course markers.

Developed specially to create the ideal substitute for the natural grass tee, the PRO-TEE golf mat is already widely used on courses both in this country and in Europe.

The Links Leisure PRO-TEE golf driving bays - also on show at SALTEX - are a single or multiple bay system which measures 3.5 by 3.5 metres in single bay multiples. Designed to allow the maximum use to be made of

the space available for practicing facilities, the bays are easily erected and they consist of a rust-resistant frame either galvanised or coated in green plastic to require little or no maintenance - and long-life baffle nets.

Developed to be informative, while at the same time adding to the aesthetics of the golf course, the PRO-TEE course markers are individually produced in either a standard or tailor-made range of styles and designs, and they can be finished in a choice of colours. Manufactured from glass reinforced cement for durability, the markers can be supported on elegant metal posts or, alternatively, supplied complete on free-standing GRC bases. Tailor-made, the markers can include not only course and hole information, but also individual logos or motifs.

The PRO-TEE all-weather golf mats, golf driving bays, and course markers will all be on show at SALTEX. Alternatively, full details can be obtained direct from Links Leisure Limited, Unit 22, Civic Industrial Park, Whitchurch, Shropshire SY13 1TT. Tel: 01948 663002 Fax: 01948 666381.

Hardi - Stand B27 - will be exhibiting its complete range of amenity spraying equipment together with greencare turf aeration products and Rogers Environmental Spray Booms.

New products in the Hardi Turfcare Range include Rogers Root Zone Injector and Wood Bay Greensiron.

Homburg Drain Cleaning equipment will also be featured.

Cooper Pegler acquired by Hardi in June '95 will be in attendance on a separate stand, showing its complete range of compression knapsack and small motorised sprayers.

Headland Amenity - Stand X23 - will launch two novel iron products at Saltext.

Both products - Headland F227GC and Sustain Fe - offer significant turf safety advantages over conventional fertiliser applications and are persistent for up to eight weeks - eliminating the need for repeat applications. In that way the risk of scorch can also be eliminated according to the company.

"Iron sprays are notorious for causing leaf blade blackening," says Mark De Ath, National Amenity Manager for Headland Amenity.

Evergreens (UK) - Stand U2 - is pleased to be exhibiting a wide and varied range of its quality products.

These will include a full range of winter mats and portable tees, bowls ditch surfacing, locker room, pro shop, spike bar, pool and jacuzzi, carpeting, tee signs and boundary posts.

On show for the first time will be the range of Victorian style street furniture that includes six and 12 feet ornamental seats, planters, bins and bollards. The range is in cast iron, fibre glass and hardwoods.

Starring on the **Barenbrug** stand - **Stand K73** - this year is the heavy-duty sports mixture, BAR 7. Newly formulated for 1996, BAR 7 is composed of top quality amenity ryegrasses, giving it rapid establishment and high wear tolerance - ideal for rugby and football pitches. Indeed, 80% of professional sports grounds use BAR 7.

The appearance and hardiness of BAR 7 is enhanced by the inclusion of Barlinda, dwarf perennial ryegrass, the "iron lady" of heavy duty sports turf. Quick recovery from wear and excellent disease resistance also single out Barlinda for praise. Barlinda shows, along with the BAR 7 mixture,

Barenbrug's mastery of the "Art of Grass."

Wiedenmann (UK) Ltd - Stand V42 - will unveil for the first time at SALTEX 96 the biggest deep spiker in the world which is an addition to the successful Terra-Spike range. The new P260 has a working width of 2.60 m and is modelled around the existing range.

Other Terra-Spike models will be

exhibited and the M135 will be displayed fitted to the new trailed hydraulic carrier frame.

Also new for '96 and being displayed for the first time at SALTEX is a range of rotary gang mowers which can be fitted with Widenmann patented unique mulching kit. With working widths from 4.2 m to 5 m these mower combinations deliver both high performance with quality finish.

Together with these products Wiedenmann will be displaying a full range of collection equipment.

Perryfields Holdings Ltd - Stand K1 - will be exhibiting the pro range of amenity grass seed mixtures, wild flowers and fertilisers. Perryfields are one of the UK's largest seed suppliers being the first to attain ISO 9002 quality assurance.

They supply to many of the UK's top sporting venues, turf growers and landscape contractors.

To cope with the increased demand for conservation areas Perryfields offers a range of native wild flower seed mixtures and wild flower

plantlets.

Pro range mixtures are available directly from Perryfields on free national next day carrier.

Technical staff are available to answer any questions and to provide quotations.

Supaturf - Stand E16 - will display its latest range of sport and amenity fertilisers called Intafaze.

For over 30 years Supaturf fertilisers have been the favourite choice of many groundsmen and greenkeepers. New Intafaze is designed to complement the company's more traditional products to offer a wider range of options to suit individual circumstances needs and approach.

Intafaze is a compacted granular phased release fertiliser available in two formulations and holds its nitrogen in two forms - the traditional ammonium sulphate for fast release and methylene urea for up to three to six months after application.

Spring, summer and autumn grades of Intafaze are available all of which are suitable for fine turf, fairways and sports field applications.

THATCH?

Unique, revolutionary and effective. Symbio's biological treatment for greens does more than remove thatch and problem "Black Layer". It improves resistance to disease and drought and reduces reliance on fertilisers and fungicides. Roots thrive and fine grasses flourish.

Call in our experts for a free on site discussion by phoning the Symbio helpline service.
