# TOOLS FOR TREES

Here are just a few products on the market that help with the upkeep of trees...

## PRUNERS

ECHO Power Pruners® provide fast, easy and safe pruning for hard-to-reach applications. Loaded with features like lightweight design, comfortable controls, adjustable oiler, and Intenz™ guide bars make the Power Pruner a versatile tool that delivers commercial-grade tree care.

PPF-210: Fixed shaft Power Pruners cut thought jobs down to size.

PPT-260: Echo's most powerful Power Pruner is designed for the toughest jobs.

## CHAINSAWS

Anyone using a chainsaw at work should have received adequate training in safe use.

Poor operator training and lack of attention can lead to accidents. The right protective clothing must be worn in order to minimise risks.

College and online courses in chainsaw training and maintenance are also available.

A pole saw or power pruner are useful if there doesn't happen to be a trained chainsaw operator on site as they offer less risk to the operator and the tree.

The 42cc, X-Series 8-42 from McCulloch has a super clean air filter system providing longer air filter life, reduced fuel consumption and increased power.
