

# BUYERS' GUIDE

## The Grass Grabber Flow Diagram

## Keeping it Clean

When it comes to washing down ground maintenance equipment after daily use, it's important to ensure you clean all materials in a safe way that prolongs the life of this essential and expensive equipment, whilst creating a safe environment for your staff and clients.

The washing down process produces water that becomes contaminated with a combination of grass clippings, sand, soil particles, petrol, diesel, fungicide and detergent. With our pioneering Grass grabber Range we'll help you remove all of these agents to ensure your golf course not only meets current legislation standards- but exceeds them!

Invest in a wash down area that you can be proud of.

The Grass grabber Range offers flexibility in overall design, installation and operation. To get your water as clean as possible, we have designed our system to have three treatment stages. Rest assured our expert team will advise on the best solution.

### The three treatment stages are:

**Grass & Solids Removal** - water flows to the collection sump which is then pumped into specially designed & manufactured filtration bags to remove grass and solids.

**Oil/Hydrocarbon and water separation** - fine solids settle out and hydrocarbons are floated off.

**Organics Removal** - the polishing filter contains various grades of media designed to reduce residual organic C.O.D. content to acceptable levels for final discharge.

Reduce the risk of blocked drains and nasty odours from wet grass- invest in a wash down area you can be proud of. Simply contact us today to arrange an on-site assessment and find out about our low maintenance costs.

For further information contact Hydrotech Solutions Ltd [www.hydrotechsolutions.co.uk/](http://www.hydrotechsolutions.co.uk/)
