

Drainage Solution

“Bunker maintenance is an expensive and time consuming part of any course budget. I visit around 20 courses a week,” said Jeremy Parkman, of M J Abbott Ltd,

“Many clubs are now considering the option of filling in or grassing over some of their high maintenance or poorly placed bunkers but with some imagination these can be retained and made more effective.

“Bunker Plug can be installed into bunkers to ensure free draining and that they spend less time spent out of play,” said Jeremy.

“Bunker Plug is probably the most cost effective solution to the poorly draining bunkers on the market today,” he added

A few of the benefits are that it:

- Can be fitted in approx an hour (by course staff).
- Significantly reduces contamination.
- Eliminates the need for pumping.
- Requires minimal maintenance.
- Provides a flushing point for bunker drainage. Also allowing for outfall verification.
- Eliminates surface pumping onto fairways / rough, benefiting both players and spectators and removes the possibility of mower damage from pumps debris.
- Significantly reduces sand migration if two or more are installed in large / long bunkers.

“With budgets on so many courses having to be stretched further and further, anything that can help save time and money, yet also appeal to those that count, has to be a good thing,” said Jeremy

“Golfers like it because the playability of the course in adverse conditions is hugely improved, Management like it because of its cost effectiveness and minimal disruption to play when being installed, and the peace of mind it provides and Greenkeepers like it because it’s quick and easy to install and it relieves them from the mundane task of pumping bunkers.”

Designed to be fitted on the surface when you need it to be, for maximum efficiency, but hidden away sub surface, when you don’t and with the ability to change from surface to subsurface or vice versa taking less than a couple of minutes giving great control over flooding even in the worst rain events.

What’s your number?

Our regular and random profile of an industry figure continues with this month’s lucky number...

Paul Moreton of BSH is this month’s chosen one...

Name: Paul Moreton

Company: British Seed Houses

Position: Sales Rep
North West England and Midlands

How long have you been in the industry?

10 years (6 previously in New Zealand)

How did you get into it?

In New Zealand I worked for an Agricultural Company that had an ever growing Amenity division and I just found myself spending more time on golf courses and sports grounds which is more fun than faecal counts!

What other jobs have you done?

Mainly Agricultural Sales, Farm hand, Produce Sales.

What do you like about your current job?

Talking technically with Turf professionals and having someone appreciate your expertise

What changes have you seen during your time in the industry?

The biggest change for me was seeing how more adaptable and efficient UK greenkeepers/groundsmen are when it comes to weather, legislation hassles and expectations compared to NZ, Australia and US counterparts.

What do you like to do in your spare time?

I play cricket at a decent level, golf, biking, I have played rugby since I was a lad but have retired due to the weather in the UK! I try to get to the beach whenever I can.

Where do you see yourself in 10 years time?

Still doing what I’m doing now hopefully, probably still in the UK.

Who do you consider to be your best friends in the industry?

Being on the road we get to know our clients better than our own staff members! So I have got to know a lot of real decent blokes over the last five years. I think back to a few Greenkeepers who really helped me understand the UK culture when I first started.

What do you consider to be your lucky number?

34, has been for years and is my current age!

Pick a number 7

Paul has picked Bruce Jamieson, Consultant Agronomist
