

BUYERS' GUIDE

What a year it has been!

Since launching in January 2011 Blinder Bunker Liner has been installed up and down the country and recently broken into Europe.

The company's exclusive installation crew has travelled many miles, and transformed many bunkers over the past months and will also be on the stand to answer any questions you may have.

The patented Bunker lining system is environmentally sound and uses rubber crumb made from recycled tyres, mixed with a binding agent, to produce a bunker lining that provides a solution to many of the problems associated with maintaining bunkers.

Rubber crumb is mixed with a binding agent in a mixer insuring complete consistency throughout. Then spread onto a sub-base at a depth of 25mm, smoothed by hand and rollers to provide the perfect base for the bunker sand.

The liner is resistant to club strikes and burrowing animals and drains at a rate up to 2,400 ml per hour. It also minimises contamination to the sand, creating substantial savings in sand replacement, reducing the possibility of stones on fine turf areas surrounding the bunkers. It also offers protection to the drainage system, extending the timeframe for drainage replacement programmes.

Highly durable and flexible, it can withstand extreme changes of temperature and the expansion and contraction of the surrounding soil due to prevailing weather conditions. It also minimises wash from the bunker face reducing maintenance time after heavy rain. The system can be easily installed when renovating existing bunkers or constructing new ones.

Blinder offers options on granulate size also giving you the advantage, as a specification can be built to the needs of your bunkers.
