NO SCORCH

REDUCES LEACHING

FLEXIBLE RATES

AVAILABLE
JANUARY 1993

'Mini-Gold', the latest addition to the 'Longlife' range from ICI Professional Products, is a high nitrogen (31:0:0) mini-prill fertilizer. It can be used on all types of turf, particularly golf greens and bowling greens.

'Mini-Gold' is a sulphur coated urea fertilizer giving a slow release of nitrogen lasting up to 14 weeks. 'Mini-Gold' has the added benefits of eliminating

the risk of scorch as well as reducing nitrate leaching.

The choice of application rates provides the turf manager with flexibility, making 'Mini-Gold' an ideal component of any turf fertilizer programme.
