

THE MOST ABSORBING READ IN YEARS.

It's a familiar story. Water meets New Improved Turfex[®] treated soil and is attracted immediately. Triumphant through summer drought and winter flood, regular treatment with New Improved Turfex fights dry patch and compaction to give the best results throughout the year. New Improved Turfex is a number one read and the number one wetting agent that will keep your turf happy ever after.

But that's only half the story – for the full facts about the unique action and ingredients that reverse the water repellent effect existing between the thatch and root zone you need to see the brochure. It is the only thing as absorbing as New Improved Turfex treated turf. For your FREE read, just contact your local Fisons stockist, your Fisons technical representative, or the address below.
