YOU'RE ONTO A WINNER WITH GREENKEEPER INTERNATIONAL

Find three tiny £50 notes – win a real one, for free!

HERE WE GO with another chance to WIN £50 with Greenkeeper International!

All you have to do is take a look at this £50 note symbol. Now look through the ads in the Buyers' Guide section and spot THREE of them – they've been reduced in size, but they're there, somewhere!

Write down the names of the three ads where the £50 notes are located and send your entries on a postcard to: Note the Note\$ Competition, BIGGA, Aldwark Manor, Aldwark, Alne, York, North Yorkshire YO6 2NF, to be received by first post Friday November 21, 1997. The first correct entry drawn after that date will win £50. It could be YOU! Enter today – and Note the Notes!

Judges' decision is final. Not open to BIGGA staff.

£50

★ **Neil Oliver, Deputy Course Manager at North Manchester GC was the lucky winner of last month's competition – a crisp £50 is on its way, Neil. It could be YOUR TURN this month!**

A Norwegian experience

Anna Joelsson Softing, Golf Course Superintendent at Chalmers GC, in Sweden reports on activities in the frozen north.

It was in the middle of a time when both Susanne Lindstrom, Head Greenkeeper at Partille GC, and I were spending more than 15 hours a day, at work. Susanne had been installing a brand new pumphouse, the results of the irrigation salesman (size XXL) of the S-48-Irrigation Company jumping on the pipes. I had been rolling around on my greens in my Helly-Hansen thick thermal outfit, in the belief that the friction between myself and the turf would raise the temperature in the top layer of my greens so that they would start to grow.

But things were getting better, I received a letter from the NGA/NGF – The Norwegian Greenkeeper Association/Federation. It was an invite to a Special seminar in Oslo, with Dr Paul Rieke, from Michigan State University, and Scientist Julie Dionne, from Laval University in Quebec.

Susanne and I did not waste any time learning more. We called for directions – it's embarrassing but I have to admit that we women are not too good at this, I am lucky every time I find my way to work.

Jeanette Immo, had started her new Head Greenkeeper job at Larviks GC in Norway. So Susanne and I decided to use our famous simultaneous capacity and combine the seminar with a visit to Jeanette at Larviks GC. We organised both housing and travelling arrangements, but there was only one thing missing – a good chef – there are not a lot of McDonald's in Norway, since Norwegians only eat raw fish!

So we called on Carl-Axel Hernstrom, Head Greenkeeper at Ekerums Golf and Country Club. He quickly collected his Big Bertha, his cookbook and picked us up.

We went to Norway and Larvik GC, a course designed by the Swedish Architect Jan Sederholm. He must have been in a good mood when he designed this course, because it was absolutely gorgeous. The greens where lush like a Swedish midsum-

mer's dream. This is due to the fact that they had been covered with a thin acrylic canvas for eight days. The fairways were so even that it was almost insulting and the bunkers so strategically placed that you shot from one bunker to another. Larviks GC is not just famous for the fantastic course but for the Larvik Invitation which is played here in July. Last year golfers like John Daly, Jesper Parnevik, Colin Montgomerie, Ian Woosnam and many others played here.

After having scrutinised the surroundings we found that this was more than just a great golf course. We found a genuine farm estate, with cattle and also a big and beautiful castle, a valley full of deer and cabins for hire – all made with a Nordic natural materials like domestic woods, stone floors, roof paintings. This is an estate with a Championship Course with an Nordic touch, it's something special, one of a kind and it could only be in Norway.

Enough of impressions of the course. After an 89 I was rather tired and it was time to do what we came for – attend the seminar. We all got a warm welcome from our Norwegian colleagues and the seminar initiated by Stal Bo, the President of the Norwegian Golf Association.

Dr Paul Rieke talked about the importance of identifying physical soil problems on golf courses. If you have, for instance, a problem with your greens you must localise the problem in order to do something about it.

Is it a compaction problem? A soil layer problem? A thatch problem? A drainage problem? A water holding capacity problem? A nutrient CEC-problem? Or a combination of the above? He talked a lot about thatch which is caused by compacted soils, acid soils, overwatering, aggressive species/cultivators, improper mowing practices, improper use of pesticides or a badly balanced fertilisation programme. The most efficient way to keep the thatch layer to a minimum, was to topdress frequently with small amounts from the start. Once you've got a problem it's a lot more work to get rid of thatch with verticutting, hollow coring and so on. As always it is best to do it correctly the first time (easier said than done!).

He also said that grass had a low IQ-value – this is my personal Swedish translation and should not taint Dr Paul Rieke – since the grass does not care if it gets the fertiliser in granules or solved in water and sprayed on. This may very well be,

but I have my own idea of how to treat my greens. My recipe is "treat your greens like you, yourself would like to be treated".

I have been thinking about my Pennncross, bent greens and found out that they are almost identical with the human being. I base my theory on the fact of several similarities. Both grass and humans:-

1) consist of cells, 2) we need a good environment to feel good, 3) we could get ill (cold virus, fungus disease), 4) sometimes we need medicine to cure the illness (penicillin, Rovral), 5) some humans/grass are stronger than others, 6) we need nutrients to survive, 7) we all die eventually, 8) we breed, 9) we prefer the warm summer, 10) we do not like it when other people walk on us.

Julie Dionne told us about the trials made mainly in Canada but also in Norway and Sweden with different winter protective covers on Poa annua greens. Winter damages are caused by three major factors, cold temperatures, turf grass diseases and disciccation. The snow cover is an important fact, it has a good insulating cover with low thermal conductivity, but the problem is that sometimes it gets to much and sometimes to little. The snow cover is some winters over 1 meter thick and rainfall will also destroy the good snow cover. Industry offer several protective cover materials but they do not have precise recommendations on their use under northern climate.

An effective winter protection programme must: 1) Include a sound fungicide protection prior to the covers, 2) always use impermeable protective covers, 3) consider local winter conditions and snow cover, 4) monitor temperature profile under covers, 5) install and remove covers at the right time, 6) use spring covers after removal of winter protective covers, 7) recognise that winter covers will never replace good turf management.

Winter protective covers are invaluable tools for the management of cold stress. The research provides information in an area where there was a real lack of information. Winter protection of golf greens requires knowledge on cold stress physiology, cool-season disease control, local winter micro-climate and protective covers.

The seminar finished, and then the first working day after the seminar was over, both Susanne's and my greens were white, not with snow, but with a spring cover mat.
