

## We like to make a point about our new 2500E Hybrid Powered Riding Greens Mower. 102, to be exact.

There is always a better way. Take our new 2500E Hybrid Tri-Plex Greens Mower. By coming up with an industry exclusive design that drives the cutting units with electric reel motors, we've eliminated 102 potential leak points by removing all hydraulics from the cutting unit drive circuit which mean less potential for damaged greens. As the industry's first hybrid greens mower, the 2500E is more than just an electric mower. It operates on a diesel engine, not a battery, so it can be used for greens mowing with all attachments, even verticutting. Since the 2500E is not dependent on battery power for run time, it can keep the same frequency of clip on every green and complete an unlimited number of greens. To see the difference a 2500E can make on your course's greens, call your local John Deere dealer today. [www.johndeere.co.uk](http://www.johndeere.co.uk)
