ROLAWN

HOW will you satisfy your players, your committee and your own staff next year? One way will be to make a resolution to visit Rolawn's stand at ETME in January to see with your own eyes how the company's products can help you.

For instance, the exclusive Rolawn Advantage, is the only greens turf on the market supplied guaranteed free of annual meadow grass.

Then there's the unique network of Rolawn turf depots set up throughout the country so that local clubs can order direct. This is the only way to ensure that you get genuine Rolawn and not an imitation.

The company is taking steps to ensure uniformity of turf, soil and sward so that the name "Rolawn" will always mean a standard of quality as well as the trade mark of the turf.

Rolawn's technical staff on the stand will be pleased to answer queries and to take your orders for 1990.

Rowlawn always welcome close inspection of their turf, but it had to stand up to close inspection here by members of BIGGA.

feature of the transmission with individual foot pedals providing instant and precise control over forward and reverse travel. An important safety feature of the transmission is full engine breaking on pedal release, preventing over-run on downslopes.

Other standard items designed to make the machine a pleasure to both use and own include power steering, fully interchangeable cutting units and grassboxes, and single lever operating controls with in-situ back-lapping facility.

Optional attachments for the Huxley 358 Greensmower include four-bladed utility mowing units, third wheel drive, verti-reel units and Turf Combs, the latter helping to lift lateral and wayward growth in front of the blades to produce faster, truer putting surfaces without reducing height of cut.

Other fine machines from the Huxley line-up to be featured on Stand A27 will include the Cushman Turf Truckster with its extensive range of purpose-built Huxley attachments for all-season turf care and

maintenance, Royer soil shredder-mixers and powerscreens for fast, convenient production of composts and top dressings, and Huxley Hydraulic Reelmowers for compact tractors, available in working widths from 5ft 6in to 11ft 6in.

Technical sales staff from Huxleys Grass Machinery will be in attendance throughout the show and look forward to welcoming visitors from all sectors of the turf management profession to the company's exhibit.

more than 700 dedicated brand products ranging from seed, fertilizers and irrigation equipment to the powerful 500 series Fairway Mowers, 300 series Greensmowers, spreaders, turf renovators... the list is endless.

Lesco even market a comprehensive range of golfing accessories which include personalised flags and safety clothing items.

CDC's Clive Lockwood expects there to be quite a demand for Lesco mowers at British clubs. "The 500 Fairway Mower produces an excellent finish in very little time" he explained. Despite its size, the machine is very lightweight, and at the flick of a switch can be converted from a 5 to a 3-unit operation for cutting golf tees. Power is from either an Onan petrol engine or a Kubota diesel unit.

Petrol or diesel options are also available on the 300 Greensmower series, the rear wheelpower steering of which affords outstanding manoeuvrability. This machine makes routine maintenance quick and simple, and offers the option of turf groomer and Verticut units.

The Honda powered Renovator 20 is another outstanding Lesco performer, designed to function as a seeder or a slicer/dethatcher. Its blade discs are spaced to provide over 40% more effective overseeding than regular machines, whilst as a dethatcher, the Renovator 20 can simultaneously overseed.

The U.K.'s already fine golf courses seem destined to look and play even better after the Lesco treatment - this is only to be expected from a company which is dedicated to the creation and maintenance of lawns and other turf areas.

34

HUXLEYS GRASS MACHINERY

CENTREPIECE of the Huxleys Grass Machinery exhibit at ETME will be the Huxley 358 Greensmower, described by all who have used this fine mower as "a true greenkeeper's machine".

Powered by a water-cooled diesel engine developing 12.5hp, the Huxley 358 has full hydrostatic transmission with individual foot pedals providing instant and precise control over forward and reverse travel. An important safety

CLEVELAND SITESAFE LTD

CLEVELAND Sitesafe Ltd well known as manufacturers and suppliers of chemical storage units, will be exhibiting two new lines at E.T.M.E.

The fuel safe, a diesel tank mounted above a walk-in base combines purchasing economy and metered delivery with secure storage facilities. Standard sizes are 350 gallon, 500 gallon, and 1,000 gallon capacity.

The new trucksafe range, although designed for mounting on the back of an open vehicle is equally applicable for depot storage of those thousand-and-one small items and hand tools which have a habit of "going missing". Five models are available from 2ft to 6ft in length.

For further information contact: Cleveland Sitesafe Ltd, High Farm, Old Lackenby, Eston, Middlesborough, Cleveland TS6 8DW. Tel. (0642) 453629.

ERIC HUNTER GRINDERS LTD

THE recent round of autumn exhibitions have paid dividends for the Hunter Grinder Company, particularly with respect to sales to

The McLane Trim 'N' Edge.

several important golf courses. The exhibitions referred to being Windsor, Haydock and Scoturf at Edinburgh, all successfully organised by the Institute of Groundsmanship.

Hunter's report orders confirmed by Muirfield at Gullane, East Lothian, Leek Golf Club in Staffordshire and Slayley Hall Golf and Country Club in Northumberland.

Having installed mower grinding machinery into Gleneagles Hotel and Carnoustie Links recently, the Hunter grinders have established themselves as "the firm to deal with" and the premier supplier of this type of equipment in Europe.

One of the most significant advances in mower grinding technology has been achieved by Hunter Grinders, and strangely enough the principles involved are not new. It is well known in precision engineering, that the way to sharpen revolving cutting tools is to sharpen each blade individually, thereby producing a 'backed off' blade with a leading cutting edge.

Historically the repair trade in

Britain has preferred to spin grind the cutting cylinders, as until the system developed by Hunter's was introduced, spin grinding was the most effective way to do the job.

CENTRAL SPARES LTD

THE McLane Trim 'N' Edge was introduced into the U.K. by Central Spares Ltd during 1989. Combining the benefits of a nylon line brushcutter with the stability of a wheeled lawnmower, the Trim 'N' Edge proved very popular with domestic and semi-professional users who wanted the benefits of a petrol driven brushcutter without the inconvenience of having to physically carry the machine whilst using it.

The unique feature of this machine is that the entire cutting head/engine assembly can be rotated through 90 degrees enabling it to be used both as a conventional brushcutter and as a very efficient edger.

The Trim 'N' Edge is powered by a 2hp Tecumsh two-stroke engine that produces ample power to avoid clogging or stalling in difficult conditions. Cutting height is adjustable from 0-4 inches and the cutting width is 20 inches by means of a 2-line head. An instant safety clutch allows the engine to be run without the cutting head turning.

The Trim 'N' Edge is supplied complete with a pair of safety spectacles and at a recommended selling price of £199.95 (inc VAT) is very competitive when compared to other petrol driven brushcutters.

COOPER CLARK GROUP PLC

COOPER Clark Group Plc are specialist distributors of several geotechnical products, and will be exhibiting the latest additions to their range, Geoblock and Geoweb.

GEOBLOCK is a new type of grass reinforcement made from reclaimed polyethylene waste, which offers several advantages over more traditional products. The system provides a high percentage of grass cover, giving a more natural finished appearance. The units are extremely quick to install, being large and lightweight; a typical rate for laying being approximately 45m² per man hour.

An interlocking tongue and groove profile around the blocks prevents localised settlement and provides a secure construction - safer for vehicle and pedestrian use. The installed blocks may be either seeded, or turf rolled into them, to

Watermation (0483) 770303

T & G Turf Irrigation (07865) 2941

After 18 years of development
you'd expect our new greens turf to
have one or two advantages.

For 18 years, scientists at Queen's University, Belfast worked to solve the perennial problem of annual meadow grass. The result is a unique seed mixture of Chewings fescue and browntop bent for our exclusive new greens turf, Rolawn Advantage. It's a significant breakthrough and represents another important milestone for Rolawn, Europe's finest turf grower.

So what are the advantages?

- First, no annual meadow grass means the smoothest textured, "greenest" green for your members (and your committee).
- And Rolawn Advantage is actually guaranteed supplied free of annual meadow grass.
- There's also the option to have Rolawn Advantage closer mown to bring the green into play even earlier.

- There's fast delivery nationwide (within 12 hours of harvesting) from Rolawn's own network of Turf Depots.
- And of most importance, there's peace of mind—through Rolawn's fastidious reputation for quality. Quality achieved through meticulous checking of every part of every field. (Ask any top greenkeeper and he'll tell you as much).

Rolawn® EUROPE'S FINEST TURF

give immediately the desired finished appearance.

GEOWEB is a three-dimensional soil stabilisation system, which enables the use of low-grade or native fill materials for even the most demanding load support and erosion control applications. This can provide an inexpensive solution to many ground-work problems. It is an extremely versatile product, and has been proven in a wide variety of applications, including road construction, embankment stabilisation, retaining walls, and the prevention of water erosion in both river and coastal situations.

Cooper Clarke Group have a technical department which can offer a design service and on-site support, at no cost to either the specifier or user. The exhibition stand will be manned by some of their technical staff who will be pleased to explain the systems in more detail.

ICI PROFESSIONAL PRODUCTS

ICI Professional products are giving their continued support to BIGGA and the European Turf Management Exhibition. As well as exhibiting they are once again sponsoring the comprehensive educational programme that has been organised by BIGGA in conjunction with the NTC.

The ICI stand will feature the top selling range of "Longlife" slow release fertilizers that have been specially formulated to meet the nutritional requirements of fine turf and sportsfields. The "Longlife" fertilizers are organically based assisting in the quick breakdown of the granules and their true compound composition means an even spread of key nutrients.

Most "Longlife" products contain phased release Nitrogen in the form of "Didin". This unique product slows the release of Nitrogen to the plant and is itself a slow release source of Nitrogen. Because it reduces Nitrate loss through leaching these fertilizers are

especially useful in areas of high rainfall, and are regarded by many as being more environmentally acceptable.

Displays will also highlight the comprehensive turf care range of products that are available to greenkeepers and grounds-men throughout the UK, including the well known products "Daconil"-turf, "Tornado" and Super "Verdone".

The ETME 1990 event will also be the venue for the launch of an exciting new project, "The ICI Premier Greenkeeper Award" to be run in conjunction with BIGGA, full details of which will be available from the stand, B28.

ICI staff will be available during the exhibition to discuss this prestigious award and how to enter, as well as answering any product related enquiries from visitors.

TERRALIFT
A SOGGY golf green can be a major headache for greenkeepers. When

bad drainage caused by compaction threatens to stop play Colin Pryce and his **TERRALIFT** pneumatic soil restructuring machine are often called in.

The Terralift injects up to 1200 litres of compressed air at a maximum pressure of 300 psi 30" below the turf surface. The release of air causes the soil to lift and fracture.

The surface then settles leaving little or no disruption. Along with the compressed air beneficial products are distributed through the soil.

The dried seaweed soil conditioner which is normally introduced expands on hydration and encourages renewal of microbial activity in the soil.

Colin Pryce has been operating a contracting service with the Terralift for three years and has recently purchased two of the latest Terralifts with a combined output of up to 600m²/hour.

The versatile Terralift has been used on all kinds of sports turf including golf greens, bowling greens, cricket wickets and outfields,

THE DRIVING RANGE

The ICI range of turf care products has been developed for professionals. Whether your target is turf weeds, insect pests or turf diseases – whether the location is fine turf or outfield, look to the driving range.

SUPER VERDONE* The effective selective herbicide which controls major broad-leaved weeds in any established turf. Three powerful weedkillers give broad spectrum cover, even to speedwell and yellow suckling clover.

GAMMA-COL* turf. Underground pest like leatherjackets and chafer grubs will cause ugly bare patches as they eat grass roots and stems. Gamma-Col turf will kill these pests and remains in the soil to give effective and long term control. The easy to use liquid formulation has contact and fumigant action.

TURF CARE PRODUCTS

Professional

ICI Professional Products, Woolmead House East, Woolmead Walk. Daconil turf contains chlorothalonil; Tornado contains carbaryl; Super Verdone contains dicamba, 2,4-D and ioxynil; Gamma-Col turf contains gamma HCH.

football and hockey pitches.

Being pedestrian operated with a single probe, deep aeration causes no problems where underground pipes or services are situated and even pitches with underground heating pipes have been treated.

The Terralift works exceptionally well in conjunction with conventional methods of aeration such as Verti-draining, deep slitting, tining etc. By aerating between land drains the Terralift restores the porosity of the intermediate soil enabling the water to drain laterally.

Where there are areas with limited access or steep gradients the main injecting probe can be operated, with the aid of extension hoses, away from the power unit.

For those areas where a greater depth is required the probe unit can be mounted on a digger arm to accommodate the increased length probes.

NEW LIGHT FAIRWAY MOWER FROM TORO

ELY (UK) Limited will be exhibiting products from the extensive 'Toro' range of Turf Management Equipment, including ones recently launched at the IOG Exhibition.

These include the new Greensmaster 1000, a 21" tournament standard greens mower capable of producing 225 cuts per yard, and featuring a high-quality bed knife and range of cut from 3/32" to 1/2". It is powered by a 3.6 horsepower Kawasaki engine. The latest in Toro's successful line of Greensmowers, the GR1000 is shown alongside the GR3000-D, the well established self-propelled diesel greensmower, and market leader in its field.

Soon to be released onto the UK market is the new Reelmaster 223 light fairway mower, designed for use on fairways and approaches, where a close, 'manicured' finish is desired. The 5 individual cutting units, complete with collectors, combine to

give a 95" total width of cut and are powered by a 23 hp Mitsubishi diesel engine.

Complementing the turf maintenance exhibits will be items from Toro's extensive range of irrigation systems.

For further information contact: Tony Golland or Graham Dale, Lely (UK) Ltd., Tel. (0480) 76971.

SYNCHEMICAL - VITAX

THE merging together in 1988 of **SYNCHEMICALS** of **VITAX** harnessed together two companies with over 100 years of service to the Horticultural trade between them.

The benefits of the merger are already becoming apparent with the introduction of exciting new products and packaging.

New 10 litre size plastic containers have now replaced many of the 20 litre tin containers in the Synchemical range and the **VITAX KEY** range is completely repackag-

ed in colour coded packs.

A unique new product has been introduced by Synchemicals to the Amenity Market called **KNOTOUT**. Launched at I.O.G. Windsor 1989 the product is a completely new answer to the perennial problem of weed invasion in newly sown or over-sown grass areas.

Containing the tried and tested active ingredient **ISOX-ABOV**, **KNOTOUT**'s residual action controls a wide range of germinating broad-leaved weeds, including **KNOTGRASS**.

The product is supplied in a syringe applicator pack. One pack is sufficient to treat 540 square metres, equivalent to an area of a football pitch goalmouths and centre circle, or an average golf green.

KNOTOUT is seen as the ideal answer for **PREVENTING** the germinations of broad leaved weeds as opposed to the treatment of them after the appearance in newly sown or oversown grass areas, therefore saving on time and costs for the Groundsman,

NG RANGE.

TORNADO: Based on carbaryl, Tornado gives economical, effective and long-lasting control of casting worms. Because it works by contact and ingestion it gives quick results and good residual activity. The special liquid formulation is easy to mix and simple to apply. After application it leaves no unpleasant odour – so as soon as the grass is dry, play can continue.

DACONIL[‡] turf. A broad spectrum fungicide for the prevention and control of major turf diseases. Its unique multi-site action and chemical composition means that even after years of successful use it continues to be effective – even sequential spraying programmes create no problems. *Daconil turf* has dependable and consistent activity at any time of year.

E.T.M.E. PREVIEW

Greenkeeper, Landscape Contractor and Local Authorities etc.

VITAX have introduced FINE 'N' a nitrogenous fertiliser with iron, the nitrogen content being a balanced mixture of organic and inorganic sources to give a consistent feed over an extended period.

See the full range of Synchemical-VITAX products on Stand No. A26.

FULLASORB

FULLASORB, a British calcined montmorillonite product, produced from a natural mineral, is currently being marketed in the United Kingdom for improving the condition of golf greens and sports pitches.

Calcined montmorillonite granules have been widely used in the United States for many years, and more recently in Britain, for the treatment of compacted and waterlogged turf.

The Saftor Guard and Blade Assembly.

FULLASORB has the ability to absorb water in wet conditions and release it as the soil dries. FULLASORB will act as a feed control, absorbing nutrients and releasing them slowly, enabling the grass to make more efficient use of fertilizer.

When FULLASORB is incorporated into heavy soils they

become friable, withstanding compaction more easily and increasing aeration at the root zone.

FULLASORB has been used on hundreds of greens in the UK and it's ability to condition soil; as well as assist in drainage and compaction, is being noted by greenkeepers.

The difference was quickly noted by Gary Hagen, when

he was Head Greenkeeper at Hollywood Golf Club, near Belfast.

He noticed that untreated greens remained sticky, oozing water in times of heavy rainfall, whilst FULLASORB treated greens remained dry and healthy by comparison.

Cedric Gough, the Head Greenkeeper at Broadway Golf Club in Worcester has been using calcined montmorillonites on his greens for some time. For the last two years he has successfully used FULLASORB in his maintenance programme in conjunction with turf dressings.

He firmly believes that FULLASORB, in tiny holes in November, has helped to extend the playing period of the course, to relieve compaction on the greens and to encourage formation of fine grasses.

FULLASORB is available from major turf wholesalers throughout the United Kingdom.

E.T.M.E. PREVIEW

PAICESSETTER

KENT-based PaiceSetter have added the new Saftor Guard and Blade Assembly to their extensive range of accessories. This unique product will revolutionise the meaning of "safety" throughout their network of brushcutter users.

The Saftor system offers a safer and more versatile way of using a brushcutter with uncompromised cutting efficiency. Each set comes complete with the Saftor Blade and a Saftor Guard assembly and all the necessary items needed to fit your machine.

You even get "Lawnmower Skids" which enable your brushcutter to cut like a small rotary mower - ideal for those awkward places. Also included is an edger attachment so the user can cut right up against trees and brick walls.

PaiceSetter offers this impressive attachment to fit their popular V25, JQ40, J40 and V500 models.

The Saftor blade's innovative design prevents injury and reduces the hazards of thrown

The Ransomes Verti-Groom cutting unit.

objects propelled by the blade. Apart from the obvious aspect of safety, the Saftor system will keep your working attire clean. The blade design is so efficient it will actually last at least three times longer than a standard slasher blade and, at the same time, reduce the shock loading on the working parts of the machine.

ALCON PUMPS

FOR the small scale irrigation duties or the larger drainage projects ALCON PUMPS invariably have in their range a unit to meet the duty.

Self priming, end suction and diaphragm are the designs with a variety of drives that range through petrol and diesel engines, single and three-phase electric motors, power-take-off and hydraulic

power.

Add to this the varied materials in which the pumps are produced, such as aluminium, brass, cast iron and plastic, they provide quite a selection.

All of these combinations allow the potential user such choice as portability and durability when you consider that the fluids to be pumped could cover clean water, suspended or abrasive solids, chemical contamination or even light oils.

Gasket materials and shaft seals can be varied to accommodate the latter items in particular.

The manufacturers of ALCON PUMPS approve and utilise new and modern prime movers as they become available, thus giving the customer the facility of an engine of his preference.

Briggs and Stratton, Honda and Villiers are still prominent in the petrol ranges and Lister-Petter or Yanmar in the diesel.

As the trend is towards the use of lightweight diesel engines alongside petrol

WELCOME TO THE WORLD OF

Rhône-Poulenc is one of the largest chemical companies in the world. Our research and manufacturing facilities, particularly in the UK, enable us to offer a product range and service second to none.

The control of weeds, pests and diseases and associated problems calls for professional management and cost-effective solutions. Rhône-Poulenc Environmental Products has, for the last 20 years, been the UK's leading supplier of a wide range of herbicides, fungicides and insecticides as well as products to control moss and to restrict grass growth.

As market leaders, we aim to provide our professional users with not only the finest range of effective, dependable products but a service that includes advice, information, training and education.
