

**WINTERIZING YOUR SPRAYER
FOOD MACHINERY & CHEMICAL CORP. —
JOHN BEAN DIVISION**

1. Flush the tank, pump, hose, and gun, with fresh water until it comes out clear.
2. Then thoroughly drain the sprayer to avoid any chance of damage by freezing.
3. Let the unit pump air a few seconds with the discharge outlet open, in order to clear valves and discharge lines.
4. Remove the drain plugs from under the pump intake (lower) valves.
5. With pump running, and using a tool to raise balls from seats, expel balance of fluids in pump cylinders.
6. Remove the drain plug in bottom of the regulator and raise the ball valve while pump is running, to permit fluid to drain. (Remove the drain plug *only* where a relief valve is used.)
7. Drain oil in the pump case and then fill to top with new oil to prevent condensation and corrosion of internal parts.
8. Store all valve balls from pump and regulator, and place drain plugs in small can of oil to prevent corrosion. Remove the gun from the hose and coat inside parts with oil.
9. Leave gun in open position. Remove hose from sprayer.
10. Coil and store in a cool dry place. Never hang hose on nails or sharp corners.
