CLEARY HAS TWO NEW FUNGICIDES!

For several years the W. A. Cleary Corporation has been screening chemicals in an attempt to find a Super Fungicide which would be worthy companion to its present line of fungicides. The ecologists are making progress in their attempts to banish the use of several types of pesticides so that the discovery of "Clearys 3336" is very timely. This new, exciting non-toxic systemic wettable powder will be available for shipment in cases of 6 — 2 lb. bags by mid-May. "Clearys 3336" has been approved to date for control and/or prevention of Pythium, Dollar Spot (resistant type too) Copper Spot, Red Thread, Helminthosporium (Leaf Spot), Brown Patch and Fusarium Roseum at 2 oz. per 1000 sq. ft.

The other product is also a wettable powder containing 8.5% Cadmium Chloride and 75% Thiram and called "Cad-Trete". Cad-Trete is used to prevent and/or control the regular Dollar Spot, Copper Spot, Red Thread, Brown Patch, the Helminthosporium-Curvalaria, complex and Snow-Mold. "Cad-Trete" is packaged in 6 — 3 lb. bags per case and used at the rate of 4 oz. per 1000 sq. ft.

"ANOTHER CLEARY PRODUCT FOR BETTER TURF"

Introducing

CLEARY'S 3336 FUNGICIDE

It Has Everything You Ever Wanted

One brand, one product, one fine quality; a wettable powder systemic. Non-toxic, non-mercurial. It prevents and controls:

1. Pythium
2. Fusarium Roseum
3. Dollar Spot (all types)
4. Red Thread
5. Copper Spot
6. Helminthosporium
7. Brown Patch

Yes, only one product, we repeat: only ONE will prevent or control the above seven diseases and do it most efficiently. Competitively priced, too.

Packed in six 2-lb. bags to a case.
