

The old saying "an ounce of prevention is worth a pound of cure" couldn't be more true than when dealing with electricity.

When working near electricity, be careful to observe the following simple rules of safety:

- Turn off all power sources and make sure all equipment is grounded before touching wire.
- Do not work on ungrounded equipment.
- Make sure someone doesn't inadvertently turn the equipment back on while it is being worked on.
- If a situation arises where the power cannot be shut off, **be alert!** Do not touch live electrical equipment while standing on damp or wet surfaces, metal floors or grates. Damp clothing (particularly wet shoes) can increase the chance of shock considerably.
- Use only tools designed for electrical applications. They must have insulated handles and in the case of power tools, be well grounded.
- Move slowly, watching that shirt sleeves, elbows, etc. don't inadvertently bump a live circuit. Keep your feet well planted on the ground so you don't lose your balance.
- If you drop a tool, let it fall. Don't lunge or reach for it or you may touch a live circuit.
- Don't wear rings, watches, chains, or other objects having good electrical conductance.
- Consider all electrical equipment "live" until testing proves it otherwise. Don't expect insulated wiring to be safe, particularly in older circuits, since the insulation may be faulty.
- Last, remember that the more accustomed you become to working around electricity the more likely you are to forget these basic rules, thus losing the protection of "Electrical Common Sense".

WANTED

Full time mechanic - also Assistant Golf Course Supt. at Chevy Chase C.C. Full park benefits provided. For more information contact Leonard A. Schnepf, Supt. Phone 537-8608.

There has been a little change in personnel at the G.C.S.A.A. office in Lawrence, Kansas. **Palmer Maples** and **Dick Hale** have resigned. Their former positions are being filled.

NO!!

No, you flannel-mouthed son of a gun, I don't want to know what's the matter with my game. If you want to play with me, keep your mouth shut about the way I hit a ball. The only things wrong with my game are that I occasionally look up or press, and there's nothing YOU can do about that. If I had that slug-nutty swing of yours, or your flat-footed stance, I would get to hell out of this club and take up croquet. Let this be a lesson to you, you score-wrecking hacker—never again open your trap about my shots, unless you want a niblick wrapped around your neck; and there are 200 other fellows who feel just like I do!

UNIVERSITY OF ILLINOIS TURFGRASS RESEARCH FIELD DAY

The annual University of Illinois turfgrass research field day will be held this year on Wednesday, August 12, 1981 at the Ornamental Horticulture Research Center in Urbana, Illinois. Registration will begin at 8:30 a.m. with the tour of the research plots starting at 9:30 a.m.

In addition to the experiments on weed and disease control, turfgrass fertility, and cultivar evaluation, research is being carried out on fairway bentgrass management and sand topdressing. After lunch, there will be an equipment demonstration where manufacturers will be given the chance to show the latest innovations in machinery.
