- Par Aide & Standard Golf Equipment

All products are palletized and fork-lift delivered.

Indiana 219/552-0552
Chicago 312/641-2898

CREATE A FIRE PROTECTION PLAN

Do your employees know what to do if a fire breaks out in your shop or maintenance building? Are they prepared to take immediate action to ensure safety and to minimize property damage?

The first step is to prevent loss of life. Employees should know the nearest exit from each enclosed work area, plus one or two alternative routes.

The second step is to notify the fire department. Emergency telephone numbers, including fire, police and ambulance, should be posted next to every telephone, and the location of any alarm boxes should be well known to all employees. If practical, one or more employees should be charged with the responsibility of seeing that the proper authorities are called in such cases.

Fire extinguishers are a vital part of an effective fire protection plan. By equipping your work areas with the proper types of extinguishers, potentially major fires can be contained, drastically reducing property damage and injury to employees.

Fire extinguishers usually come in three basic classes: A, B and C.

Class A extinguishers are generally air-pressured water, soda acid, pump tanks or gas cartridge types. They are only effective on wood, paper, or textile fires, and should not be used on flammable liquid or electrical fires. This type of extinguisher works by wetting down the fire's level, lowering its temperature and extinguishing it.

Class B extinguishers usually use dry chemicals or carbon dioxide, and are most effective against flammable liquid fires, including oil, gasoline, paint or grease. They may also be used to fight small Class A fires.
