Weed Seed Per Square Foot of Soil

Good garden grade topsoil contains as many as 200 viable weed seeds per square foot of surface. These seeds are ready to germinate at any given time and represent only about 5 percent of the total weed seed present in the top 6 inches of soil. Thus, there are in excess of 1 potential weed for each square inch of your newly seeded or established lawn. Vigorous, healthy lawngrasses will not permit these weeds to become established. Named varieties of grasses are best for stopping weeds before they start.
