The Biology of Turfgrass Soils
January 3, 1989

Golf Course Safety, Security and Risk Management
January 4, 1989

Dr. Eliot Roberts, Executive Director of The Lawn Institute, reviews the principles of soil microbiology, describes the favorable and unfavorable functions of micro- and macro-organisms and discusses common practices that promote or restrict desirable soil biological activity, all as they relate to turfgrass management. Technical information on the safe use of pesticides to enhance soil biological processes will provide a tool for public relations in the current controversy regarding chemical usage.

Dr. Michael J. Hurdzan, noted golf course architect, presents risk management techniques, including the identification of hazards to golfers and non-golfers, the potential for accidents and types of negligence and liability. Safety procedures to minimize risk will be described and adequate and appropriate insurance coverage discussed. This course is designed not to provide legal advice but to expose superintendents to potential litigious situations as encountered in the personal experience of a golf course architect.

Co-hosts:

Midwest Association of Golf Course Superintendents
Golf Course Superintendents Association of America

One Continuing Education Unit (CEU) is attached to each one-day seminar. Luncheons are included in registration fees as are take-home reference materials. A certificate of achievement will be awarded to participants who successfully complete the seminar(s) by passing the examination at the conclusion of the program.

Pheasant Run Resort is the Midwest's largest--and among the finest--resort facility. Located on 200 acres in the Fox River Valley, 40 miles west of Chicago, it is famous for its extraordinary range of year 'round activities and top name entertainment. Seminar participants registering by December 3, 1988, are guaranteed a \$65 rate (single or double). Overnight reservations are the responsibility of the seminar registrant.
