# Wetland Policy Issues

## by CAST, Council for Agricultural Science & Technology

This new CAST report discusses the basis for the ongoing controversy surrounding wetland regulation. The task force synthesized, sifted, and summarized the voluminous data, divergent perspectives, and existing philosophies into this single manuscript. Several suggestions, conclusions, and implications for the various entities in the wetland issues are offered.

#### SUGGESTIONS

Wetland scientists should

- recognize the legitimate bounds of their disciplines and the proper role of science in policymaking.
- · interact with agricultural and ecological interests and the public to support the development of public policy, and
- · devote more attention to the relative values of nonwetland landscapes.

Wetland policymakers/regulators should

- · recognize that not all wetlands are equal,
- · resolve the property rights issue,
- · define wetland more clearly,
- · recognize that nonwetland landscapes have value too, and
- · recognize that wetland can be valuable for more than its natural functions.

The agricultural community should

- know that the world is changing, especially with respect to the assignment of "rights."
- · appreciate the other side(s) of the wetland issue, and
- · recognize that trade-offs are necessary in a world of increasing scarcity.

The environmental community should

- · recognize that government is anthropocentric (like it or not).
- · acknowledge that money is the common denominator for exchange.
- · recognize that trade-offs are necessary in a world of increasing scarcity.
- · appreciate the other side(s) of the wetland issue, and
- · encourage efforts to identify values of nonwetland landscapes to the degree of effort expended on wetlands.

The public should

· not rely on science or public officials to determine what they want protected; they should become informed and get involved.

#### CONCLUSIONS/IMPLICATIONS

- Debates over the use and allocation of wetlands continue.
- Although approximately half of the lower 48's wetlands have been converted to other uses, that alone is not justification for preserving all of the remaining half.
- · There is scarce middle ground in the discussion of wetlands - or at least few are willing to occupy it. Those informed and interested enough in the subject to take a position usually end up at one or the other extreme in the debate.
- · While wetlands perform numerous useful functions, quantification, elaboration, and enumeration of wetland values in the absolute are of little use; what is needed are estimates of the relative values of wetlands and all other landscapes or alternative uses, which may have to be given up to protect wetland. Unless similar evaluations of forest land, agricultural land, grassland, and urban land are available, no meaningful relative basis exists on which to suggest land management or allocation policies. ### ...TOPDRESSING WITH TDS-2150 SAND

from Lake Shore Sand, Wisconsin's Largest Topdressing Sand Supplier

TDS 2150 is a well sorted, highly pure Lake Sand

which has been proven ideal for topdressing.

TDS 2150 is thoroughly washed to eliminate excess amounts of clay and then flotation treated to remove the unwanted calcium and magnesium carbonates. These advanced processing techniques enable us to provide you with a clay and silt free, pH controlled material with a minimum of 80% of the grains

between .21 and .50 millimeters. TDS 2150

- The public is largely oblivious to wetlands and the wetland debate. The combination of distance from the public's every-day focus and the technical nature of wetland issues contributes to confusion about the real problems that exist.
- One of the principal constraints to resolving wetland debates is agreeing on what constitutes a wetland. Science alone cannot decide for society what is and is not wetland. Wetland is as much a social construct as a topographic feature, therefore the public policy arena rather than the academic laboratory is the proper locus for defining wetland.
- Existing wetland legislation leads to confusion because many of the terms (e.g., mitigation, restoration, creation, or no-net-loss) are not defined clearly.
- Wetlands are dynamic components of the landscape and dynamic in the way society perceives them.
- Social value, an appropriate common denominator for social decisionmaking, frequently is confused with ecological value and function of wetlands. For there to be social value, wetland function must lead to some potential perceptible change in human well-being.
- There are many well informed, rational people who place higher values on alternative uses of wetland than on "natural" wetland.
- All wetland regulations affect the economic decisions of individuals, firms, and the public. Regulation also affects the distribution of income among present generations and between the present and future generations.
- Science will not, and should not, be the last word on wetland issues.
- Science has made contributions toward resolving the issues, but, despite decades of excellent wetland science, the issues remains largely
  - an issue of philosophical and ethical value differences,
  - a political-legal issues of explicitly assigning property rights,
  - a social-technical issue of defining exactly what a wetland is.
  - a largely regional-local issue most often discussed at the national level, and
  - a matter of having to make decisions today in spite of not resolving the above four points.

# Super 'N' Site Profile

#### by John Gurke, CGCS Public Relations Committee

The host of this month's MAGCS meeting is Jim McNair of Orchard Valley Golf Club. Unlike its Superintendent, Orchard Valley is a young course (opened in July of '93) with lots of character. The Ken Kavanaugh design features 50 acres of wetlands, 10 acres of sand, and 12 acres of naturalized fescue areas (all perfect for my game). The course is currently ranked in the top five public tracks — I love saying "tracks" — in the Chicagoland area, and is a challenge from whichever tees you choose to hit from.

Jim broke into the business way back in 1965 when he worked for Wadsworth Construction, and in 1967 started at Fox Bend. From 1970 to 1993, he was Superintendent of Fox Bend (another Fox Valley Park District course). In fact, he did, for a time, carry the title of Superintendent for both courses simultaneously.

- Heavy-duty welded steel construction
- Hydraulic weight transfer for better traction
- · Designed for maximum operator comfort
- New engine choices
- Automatic differential lock
- · Oversized 23" drive wheels
