The Crisafulli Pump consists of a double-sided impeller enclosed in a housing of quarter-inch steel plate. The unit incorporates two suction ports and one discharge port to which a length of butyl rubber tubing is attached. The pump unit can be hitched to a farm tractor or any other vehicle with power-take-off. The water output is then controlled by the p. t. o. speed. You can pump as much as 24,000 gallons per minute, or as little as 100 gallons per minute...

All models and sizes of pumps are available with your choice of electric, gasoline, or diesel engines to make the unit completely independent of any other power source.

the club pros

They're your hard-working, dependable VERTAGREEN turf fertilizers from USS Agri-Chemicals. Give your local VERTAGREEN Turf Specialist a call today. He'll tour your course and recommend a Professional Turf Program specifically suited to your needs, including dependable USS turf fertilizers and turf protection chemicals.
