## 670 SERIES ROTARY SPRINKLER

*Just the change*

*your system needs.*

IRRIGATION DIVISION

### **Not-so-quick couplers**

No more time-consuming, inconsistent, water wasting manual operation. With the new 670, a quick-coupler system can be converted to automatic easily and economically with minimum turf disruption.

### **You get more for less**

The 670 offers a NEW PLANETARY GEAR DRIVE, bigger nozzle and full-circle coverage. And the 670's throw range is ideal for double row systems and conversion of short spacing Q.C. valve single row systems. Better coverage . . . fewer heads . . . lower cost.

### **The "just-right" head**

A new in-between size head, TORO's 670 fits your needs when you're after an intermediate throw, ranging from 164' to 204'.

### **All the TORO extras**

SILENT operation. High pop-up, positive pop-down. Valve-in-head, to prevent line drainage, wet spots or turf damage. And above-the-ground servicing for easy maintenance.

Don Hoffman, Superintendent at Oak Hills G.C., is interested in hiring an assistant. For information call 312-448-5544.

At the present time Don is constructing a six-ft. fence around the course to help cut down on vandalism.

### A Couple of Spring Thoughts

Check drainage and seepage areas and mark them for correction now.

Don't begin to irrigate early in the season ... give the grass roots a chance to dig for water ... once you start irrigating you usually must continue ... grasses may turn off color but they don't die in Spring for the lack of water.

Mr. Ray Gerber  
865 Hillside Avenue  
Glen Ellyn, Illinois 60137  
Dear Ray:

For some time I have wanted to write this personal note to congratulate you for the fine job you have and continue to do with The Bull Sheet. It's classy, clean cut, informative and stimulating periodical and I know it takes a great deal of effort.

Many thanks for the contribution it is making to turf management and for sending it all the way to California. We appreciate it much and our best wishes for continued success in 1975.

Most sincerely,  
W. H. Bengueyfield  
Editor, Green Section Record

# baron

## KENTUCKY BLUEGRASS\*

### A professional grass for professional people

One reason Baron is the choice of most professionals is the combination of fast germination, slow growing and its ability to quickly form what sod growers call "a tight-fisted root system." You can mow Baron as low as  $\frac{3}{4}$ -inch — and that's another reason Baron is ideally suited for golf courses, sod fields, fine lawns, industrial and other landscaping areas. Since Baron is winter hardy, it keeps its deep green color well into the cold months. . .highly disease resistant, too.

**ORGANIFORM 24-0-0 — A NEW NITROGEN FERTILIZER**

Organiform 24-0-0, a long lasting organic nitrogen fertilizer successfully introduced in this area last year by Hawkeye Chemical Company of Clinton, Iowa, will be distributed by Toro Distributing according to A. H. Bowers, Hawkeye Marketing Manager.

Used in the East for many years in professional turf management, Organiform supplies both water-soluble and water-insoluble nitrogen for steady slow release through the growing season.

The Product is being evaluated for use under mid-west conditions at Purdue University and first year's performance data confirm that it is a safe and effective slow-release nitrogen source.

For the finest winterseeding...  
choose a modern fescue—

# Jamestown

Winterseeding golf greens is an exacting task. Precise timing, technical skill, knowledgeable supervision are all needed. . .and well-chosen grass seed.

For the finest winterseeding grass, plant Jamestown Red Fescue. Released by the University of Rhode Island and marketed exclusively by Lofts Pedigreed Seed, Inc., it's a top rating, rapid germinating, Chewings-type fine fescue. Jamestown is available only as Certified seed. . .Lofts has applied for protection under the Plant Variety Protection Act of 1970.

There's nothing quite like Jamestown for rich, deep color and low dense growth — it makes an ideal putting surface. Clemson University studies have shown that Jamestown will thrive at ¼-inch mowing under putting green conditions. It's also outstanding for tees when mixed with the fine-textured ryegrasses.

Here's what Dr. Fred Ledebor has to say about Jamestown:

"Jamestown is especially well-suited for overseeding southern golf greens during the period of bermuda dormancy. It blends excellently with the fine-textured perennial ryegrasses such as Manhattan and Pennfine. This mixture takes advantage of the rapid establishment of the ryegrass combined with Jamestown's excellent, fine texture and deep green color. Jamestown holds this excellent color during frosts, compensating for the discoloration of ryegrasses. And you'll find Jamestown competes less with bermudagrass during spring transition. That means better bermudagrass during the summer.

Jamestown's low, dense growth is particularly fit for greens. But its growth rate is only moderate. Certified Jamestown is available weed and crop-free. Jamestown is also available treated with KOBAN™ fungicide for control of pythium and cottony blight."

Dr. Fred Ledebor, Vice President in charge of the Department of Agronomy and Research, Lofts Pedigreed Seed, Inc. examines a test plot of Jamestown fescue.

## Why Jamestown Fescue stands out for the Winterseeded Green!

### SEEDING RATES FOR GREENS AND TEES

	Lbs. / 1000 sq. ft.	
	Greens	Tees
Jamestown	20	—
Manhattan or Pennfine	30	10-15
Jamestown + Manhattan or Pennfine	25	8-12

Jamestown Fescue blends well with Manhattan or Pennfine ryegrass as well as Kentucky Bluegrass and bentgrass.
