

Put this professional to work where you need both formal cutting and maneuverability to mow around greens, traps, fences, trees and such. No mower does it better than our Turf Pro 84. Because it's all hydraulic. That means its reel rpm is independent of ground speed. So the engine throttle and traction control pedal can be adjusted to give you the right clip for the right height and type of grass. And this agile performer mows 3.88 acres an hour at 5 mph. Read on. See how Toro engineered the Turf Pro 84 for you.

Turf Pro 84®

Every inch a Professional

1 WE POWERED ALL THREE REELS HYDRAULICALLY.

Each has its own hydraulic motor, eliminating drive belts and most chains and sprockets. Along with their constant adjustment, repair and replacement.

2 WE MADE OUR REELS REVERSIBLE.

To permit "backlapping". For fewer visits to the shop for sharpening.

3 WE GAVE YOU A CHOICE OF 7 OR 5 BLADE REELS.

Which fits your needs? The 7 blade reels give you effective cutting heights from 3/8" to 1 1/2", and a range of clip from .54" at 3 mph to .90" at 5 mph, for the finished look required on areas like golf course tees and school athletic fields. Our 5 blade reels are for higher cuts, from 3/4" to 2 1/2", with clip range from .76" at 3 mph to 1.25" at 5 mph. Ideal for parks, cemeteries, commercial grounds and similar areas.

4 WE GAVE EACH REEL ITS INDEPENDENCE.

With independent suspension, to individually hug ground contours. And all three reels lift hydraulically, for easy transport of your Turf Pro 84.

5 WE MADE HEIGHT OF CUT ADJUSTMENT EASY.

Just move a single pin to change cutting height in 1/8" increments.

6 WE PUT DRIVE INTO ALL THREE WHEELS.

That makes each a drive wheel, when mowing conditions demand it, for excellent traction. This, plus our machine's single rear wheel design gives it more maneuverability for tight turns around obstacles. And its low center of gravity and wide wheel stance give it great stability.

7 WE POWERED ALL THREE WHEELS HYDRAULICALLY.

Each has a hydraulic motor that precludes the need for belts and other wear-prone components as well as their repair and replacement.

8 WE PUMPED ITS FUEL ELECTRICALLY.

With an electric pump that assures a continuous, metered flow of fuel to the 23 hp, air cooled, twin cylinder engine.

9 WE BEAT THE HEAT TWO WAYS.

One is a baffled engine compartment design that stops recirculation of hot air and forces it away from the engine compartment and operator. The other is a hydraulic oil cooler that disperses heat for longer engine life.

10 WE MADE ITS AIR COME CLEAN.

With a heavy duty Donaldson air cleaner that filters out dirt, dust and other contaminants before they can reach the engine.

11 WE STEELED IT FOR DURABILITY.

With a rugged, heavy duty 11 gauge steel frame.

12 WE MADE IT EASY TO RUN, EASY TO RIDE.

With an operator station designed for maximum comfort and convenience. All controls are easily accessible, steering is automotive type, and the cushioned seat is up front for a clear view of the turf.

13 AND WE OFFER THESE OPTIONS.

Front rollers, grass catchers, deluxe seat and roller scrapers.
