

What mower gives greens the kindest cut of all? The Toro Greensmaster 3.[®]

This greensmower is designed with its cutting heads isolated from both the traction unit and the grass baskets. This unique feature allows the Greensmaster 3 to cut the green more evenly. From $\frac{3}{32}$ " to $\frac{1}{16}$ ". That means your greens will not only look better, they'll play better, too. And if that sounds good, wait until you read the rest of our story.

1 WE GAVE IT FREEDOM OF MOVEMENT.

By using a carrier frame with low pullpoints that pulls rather than pushes the cutting unit. Resulting in balanced, fully floating cutting heads that allow the reels to float freely as they cut, unaffected by dips or bumps encountered by other parts of the machine. Or by the weight of the clippings in the baskets. So you get a smooth, even cut from one side of the green to the other.

2 WE MADE IT MORE MANEUVERABLE.

With a three-wheel design that allows the Greensmaster 3 to turn within its own length. This tight-turning design coupled with two independent, hydraulically-

driven, front traction wheels allows this rear-steering triplex to cut up to and around the edges of greens, collars, and traps. And a single forward reverse pedal gives the operator even more control in tight turns.

3 WE MADE IT DURABLE.

The Greensmaster 3 is designed with hydraulically-driven traction wheels, reels, and reel lifts. These enclosed, self-lubricating power systems give longer service and require less maintenance because there are no gears to change, belts to adjust, or clutches to repair.

4 WE MADE IT COMFORTABLE.

The operator station features centralized controls within easy reach of the operator, plus a steering arm that can be adjusted in height to allow for more leg room, as well as an adjustable cushioned, high back seat. All for the maximum in operator control and command of the machine.

5 WE MADE IT EASY TO SERVICE.

Toro's exclusive quick-disconnect cutting units allow fast, easy removal of the reels for servicing in the shop.

6 WE MADE IT VERSATILE.

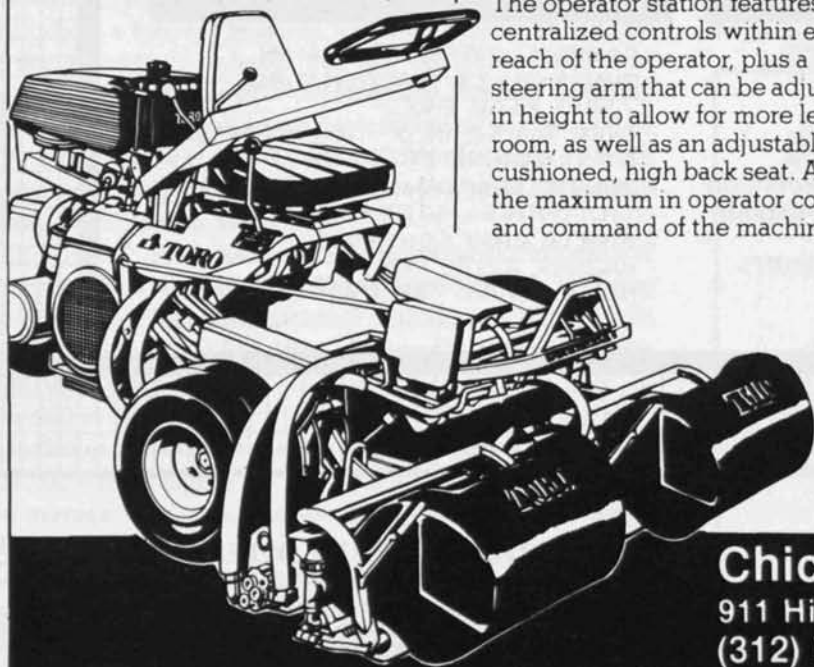

The balanced, 8-blade cutting units are interchangeable, as are all baskets and reel motors. And these quick-disconnect cutting units allow fast, easy conversion to thatching or spiking reels:

Toro's special profile-tooth blades spike cleanly without ruffling turf so greens are playable immediately after spiking. An adjustable transfer spring brings weight from the traction unit to bear on the reels 57" spiking width to achieve the maximum penetration of $\frac{1}{4}$ ".

The spiral blade pattern of Toro's thatching units means less wear on the drive motors through more efficient thatching and throwing of thatch into baskets. The spacing between blades over the three reels 59" thatching width is adjustable from $\frac{1}{2}$ " to $1\frac{1}{2}$ " to allow depth-of-thatch adjustments in meeting varying turf conditions.

7 THE TORO GREENSMASTER 3[®] OFFERS ALL OF THESE OPTIONS.

Variable Speed Kit, Reel Shut-Off Kit, Roller and Scrapers, Quick Height-Of-Cut Conversion Kit, Rear Roller Cleaner Kit.
