

the only sweeper for both turf and pavement.

Turf Vac sweepers are helping keep numerous greens and fairways across North America and several foreign countries in top playing condition.

So fast and effective is the Turf Vac method of leaf, thatch and plug removal that one man using a tractor-drawn unit is able to clean an entire course within a minimum time span. An entire course, including cart paths, can be freed of leaves, grass clippings, and plugs late Friday afternoon in preparation for heavy weekend use. In the event of leaf-fall overnight, a second quick clean-up can be performed early Saturday morning. Such thorough and continuous cleaning is well appreciated by golfers who can determine the lay of the ball without the visual distraction of leaves and other debris.

Turf Vac's Model FM-10 sweeps a swath almost 10 feet wide. It has a hopper capacity of over 8 cubic yards. Dumping is easily and quickly accomplished by only one man.

Tractor drawn models FM-5 and FM-10 are also available in three gang units. Using multiple units saves you additional time, labor and equipment wear.
