FOR MAINTENANCE, AGRICULTURE AND INDUSTRY

Orland Park — World's Golf Center

by Pete Vandercook

Visitors to the Village of Orland Park always notice one of the towns seven water towers, which are lettered "Orland Park — World's Golf Center". The next question is always "Why is Orland Park the golf center of the world?"

This all started in the early 1960's when Bob Johnson, owner of Illinois Lawn Equipment, Inc., and the late Joe Henley, owner of The Farmer's Daughter Restaurant and The Farm House Inn Motel, were helping form the Orland Park Chamber of Commerce and searching for a fitting slogan for Orland Park. They ascertained that there were 13 - 18 hole daily fee golf courses within 13 miles of Orland Park and the motto was born — "Orland Park - The World's Golf Center".

Subsequently, the village board passed a resolution adopting the slogan. In the mid 1960's singer Andy Williams, a guest of the Joey Bishop late night talk show, referred to San Diego, California as the nations golf capitol. Orland Park Chamber of Commerce President, Noel Smith, immediately sent a telegram to Joey Bishop who apologized the following night explaining that Orland Park has 531 golf holes within a 13 mile radius and San Diego only had 513 holes. Joey went on to say that Orland Park was unquestionably "The Golf Center of the World".

The above information came from "The Orland Story — From Prairie to Pavement" (copyright Jan. 1991) and at that time, I was asked to update the Orland Park golf hole count. I took a protractor, calculated 15 miles (as the crow flies) and drew a circle centered at 143rd and LaGrange Road. The count was as follows:

Country Clubs — 387 golf holes
Municipal Golf — 99 golf holes
Daily Fee Courses — 603 golf holes
TOTAL — 1,089 golf holes

There have been additions since 1991 —
Hidden Meadows (Park Forest Municipal) — 9 hole addition
Ruffled Feathers (Lemont) — 18 holes
White Mountain (Orland Park) — 9 holes
Green Garden Country Club (Monee/Frankfort) — 18 hole addition
* Greystone Golf Course (Tinley Park) — 9 holes
* Alsip Park Dist. Golf Course (Alsip) — 9 holes
* Stony Creek Golf Course (Oak Lawn Park Dist.) — 9 holes
* The Meadows (City of Blue Island) — 9 holes
* New Lenox Community Golf Course — 18 holes
* Broken Arrow — 27 holes

NEW TOTAL — 1224 golf holes

*=Under construction or grow in

For the following part of this story you will have to accept my definition of the Orland area. (Notice that I have expanded Orland to include various incorporated and un-incorporated areas that are contiguous to Orland Park.

Golf course superintendents and owners who spent most of their adolescent years in the Orland area include:

Jim Evans - Turnberry Country Club
Ed Fischer - Old Elm Club
Dave Behrman - Riverside Country Club
Curt Adams - Thunderbird Golf Course

MILLCREEK TOP DRESSERS

An Easy Way to Dispose of Grass Clippings... And Save Money

In one easy step, eliminate costly dumping fees and improve the rough by spreading grass clippings still enriched with precious fertilizer. Millcreek's Top Dressers are equipped with an adjustable undershot poly brush designed to evenly distribute top dressing from three to ten feet wide.

The spreading uses of these Top Dressers are endless:

- Fertilizer
- Sand
- Top Dressing
- Grass Clippings
- Seed
- Compost

Models are available with PTO or Engine Drive.

(Orland Park continued)

Tom Hildreth - Asst. Supt. Twin Orchard Country Club

There are also an abundant number of golf professionals from the Orland area. They are not being listed because of the difficulty of compiling a complete listing.

The Orland State Bank also played a role in Orland Park being known as The World's Golf Center. The bank, owned by the Gee family (who also own Big Run Golf Course) have played an important role financing golf course ventures over the years. They have worked with Silver Lake, Cog Hill, Glen Eagles, Westgate, Urban Hills, Lincolnshire and Oak Hills, to name just a few. George Gee, Jr. stated that years ago many lending institutions were not familiar with golf and tended to stay away from golf course loans. The Continental Bank of Chicago even sent people shopping for golf course loans to the Orland State Bank. The Gees, because of their golf ownership background, welcomed these loans, made many, many of them, and as George Gee Jr. proudly states, "Never had a bad golf course loan". As an aside, the Orland State Bank also donated to the Village of Orland Park, the land where "The First Golf Center of the World" water tower was erected.

I would be remiss if I didn't mention that Illinois Lawn Equipment headquartered in Orland Park has been selling turf maintenance equipment to over 500 golf courses in the greater Chicagoland area for the past forty years.

Two nationally known sod growers are also natives of the Orland area. Carl Habenicht, founder of H & E Sod, was born in a farm house on a family farm on the property now known as Silver Lake Country Club. The late Ben Warren of the Palos area founded and operated Warren Turf Farms for many years. In addition, Ben's wife Dorothy Carey Warren, over the years, was secretary to the Chicagoland Golf Course Owners Association, The Midwest Association of Golf Course Superintendents, The Illinois Turfgrass Foundation Central United States Equipment Distributors and The Sod Growers Association. She held most of these positions simultaneously.

You will note that certain liberties were taken with definition of the "Orland Area". Included was Orland Park, unincorporated Orland Park, the Palos areas, Lockport, Lemont and the very edge of Chicago that abuts the southwest suburbs. Although that may stretch the Orland area a little, everyone listed does have an Orland connection. If I had spread out just a little more to the Matteson, Chicago Heights, Homewood, Flossmoor area, I could have added more names like:

- Dave Ward - Olympia Fields Country Club
- Dale Pieper - Cherry Hills Country Club
- Tony Brzinski - Idlewild Country Club
- Ron Letorneau - San Marcos Country Club (California)
- Bill Nuessle - formerly of San Marcos Country Club
- Andy Dauksas - Glen Oak Country Club
- Tom Lively - Ruth Lake Country Club
- Bob Lively - Glendale Country Club
- The late Walter Pieper - Flossmoor Country Club
- The late Walter Domm - South Shore and Calumet Country Clubs
- The late Fred Wollenberg - Gary Country Club
- The late Mel Warneke - The Standard Club, Atlanta, GA
- The late John Boettger - Idlewild and Joliet Country Clubs
- The late Norm Stelter - Chicago Heights Country Club ...

...TOPDRESSING WITH TDS-2150 SAND
from Lake Shore Sand,
Wisconsin's Largest Topdressing Sand Supplier

TDS 2150 is a well sorted, highly pure Lake Sand which has been proven ideal for topdressing.

TDS 2150 is thoroughly washed to eliminate excess amounts of clay and then flotation treated to remove the unwanted calcium and magnesium carbonates. These advanced processing techniques enable us to provide you with a clay and silt free, pH controlled material with a minimum of 80% of the grains between .21 and .50 millimeters. TDS 2150 can be ordered dry as well as damp.

For more information or to place an order, give us a call.

Hazardous Chemical Storage Buildings

Rely on Safety Storage Relocatable Weatherproof Buildings for Safe Containment of Golf Course Chemicals.

Now you can remove hazards from your chemical storage areas. Provide secondary containment and institute real fire-protection and security measures. Safeguard your facility. Minimize liability. And comply with federal, state and local regulations.

Proven throughout the country—in all climates and virtually every hazardous chemical—all Safety Storage Buildings incorporate secondary containment reservoirs, corrosion-resistant floor gratings, ground connections, fire-suppression systems, special security features, and hazard labeling. Select from an array of options ranging from emergency eye/face wash units, forced air ventilation, explosion-proof lighting, built-in heating and cooling, to multiple fire-wall-separated compartments.

These durable, all-weather, welded steel and fire-rated buildings are available with a host of options to meet most storage requirements.

to name just a few. Imagine what would have happened if the names listed were expanded to the same 15 mile radius as the golf courses listed.

Just as this story was being completed, Channel 7's Tim Weigle aired a Hot Links segment proclaiming Mundelein as the Golf Capital of the World. He stated that Mundelein had eight eighteen hole golf courses within its corporate limits. Congratulations to Mundelein for being the Golf Capital of the World from Orland Park, the World's Golf Center.

I apologize in advance for any inaccuracies or omissions. This is not an easy list of names to compile. The possibility of error is good and the possibility of omission is tremendous.

I must acknowledge the assistance given me in this endeavor by Dale Piper and others, particularly Dudley Smith, who has a great memory, is an accomplished name speller and came up with some important additions and direction. Thanks again Dud.

Landscaping the Details

by Bob Lohmann

Landscape design for the golf course has two distinct phases. The first is the tree planting plan, which has an impact on how the golfer plays his game. Large tree plantings are positioned throughout the golf course for definition of target areas, strategy, depth perception, and safety. These trees should be deep rooted, high and open branching, and relatively litter free.

The second phase of landscaping the golf course is the detail planning, which provides the most visual and functional value to the golfer. These plans should include use of smaller structured plant materials including ground covers and flowering shrubs. Also included are retaining walls, planters, paths, mounds, and all other unique design features. These items should have a visual impact on the golfer without affecting the way he plays the game.

Color, texture, form, and scale are the characteristics of detail landscaping that provide a pleasant atmosphere for the golfer during the golf round. If he fails to notice the beauty of these design features, his golf game will not be affected.

The majority of the visual design features should be placed in the clubhouse areas or adjacent to tees and other out-of-play but not out-of-site areas. Flower beds and shrub masses should not be placed adjacent to greens, fairways, or areas that are in play for the golfer. These colorful plantings may be aesthetically pleasing, but they hinder the game by causing slow play and forcing local rulings.

The functional impact of detail landscaping is evident through the use of materials that direct circulation patterns. A curbed cart path, a heavily planted mound, or a raised flower bed can direct traffic to eliminate wear areas or unsafe conditions. The use of mulch beneath flowers, shrubs, or tree plantings eliminates grass cutting and reduces maintenance. Stone or timbers placed on creek or lake banks eliminate erosion problems and minimize the maintenance of cutting grass or removing weeds.

Similar to tree plantings, the detail landscaping plan must include all the proper techniques. Neglecting any of the design elements can result in a golf course that is merely decorated with plants. Detail landscaping designed and implemented in balance will accent the golf course design and create a completely shaped exterior space.

YOUR SOURCE FOR ALL RANSOMES ROTARY
EQUIPMENT - PARTS - SERVICE

(Rosty continued)

golf courses do not seem unreasonable. Still, activists argue the non-essentiality of the golf course, attempting to play up the exclusivity of the sport. Just as Rosty is attacked for being a old-time "backroom" kind of politician who is held up like a dinosaur. However, when we look closely, we know there was more to Rosty than the inappropriate behavior we have heard, just as we know today that the majority of golfers are daily fee, resort type golfers.

Looking In

Looking closely works both ways. How many golf courses are managed as environmentally responsible as possible. We always respond to claims, like the WSJ article, by lauding the environmentalism of our industry. Yet, we still have superintendents spraying on calendars, no pesticide containment facility, non-calibrated equipment and some people who think there is no need to be concerned about these issues. Just as Rosty has to realize the rules have changed and what may have been considered acceptable is no longer practiced. It is more than the actual measure of risk, we have learned from our experience that it is the appearance of risk. Similar to how politicians discuss the appearance of impropriety, I think it was Sen. D'Amato from NY who raised the term ethical behavior (as a native New Yorker, I am very familiar with the lack of ethical behavior from the undistinguished Sen. D'Amata).

It has been interesting watching Rosty proclaim his innocence in the face of what appears to be serious charges. But, what if he has explanations that make sense for his actions? If you saw the CBS *Eye on America* story that used data from "Toxic Fairways" (a publication almost 5 years old) to warn the public about the risks of pesticides used on golf courses, as a lay person, wouldn't you wonder? Not to mention Paul Harvey and the rest of the story. When we attempt to explain and clarify our position, do we sound as defensive as Rosty does? Should we be? Why don't we let the golfers answer these questions? How come the golf course management industry is left to defend all of golf? Why doesn't another politician stand up next to Rosty and say I've performed some questionable acts, but, now I am aware of this behavior, I no longer act inappropriately and I'm willing to accept reasonable consequences? Wouldn't that be the most human thing to do? Don't you or I apologize when we make a mistake, **accept the consequences** and vow to change for the better? Seems simple doesn't it, yet, sometimes the simple things are not so easy to do. The final moral to the story is that our judgment is easily impaired by how closely we are **willing** to look.

The High Ground

I know the industry is being attacked by many individuals who would not even consider looking at their own behavior. I know that as a matter of risk assessment and environmental benefits, golf courses are an exceptional asset to our society. I know that our industry is mostly committed to preserving and protecting environmental quality, beyond just lip service (e.g. Tony Rzdzki and the Audubon Program). And finally, I know that unless we tell our side of the story, we could become regulated to the point that actually increases the chance of environmental risk by limiting our decision-making and flexibility.

At the GCSAA meeting in New Orleans, John Stossel said that ultimately the public will decide how the golf-environment relationship plays out. The doom-sayers and advocates will drown each other out and the pendulum will come to rest

somewhere in the middle. I urge you to avoid vehemently defensive positions. Communicate effectively in your everyday dealings with people and the press. Supply factual information, share personal experiences (people need to know we care about the same things they do) and avoid over-emphasizing the benefits of turf. My feeling is that we must take the high ground and avoid over reaction in response to the ridiculous claims of people like Paul Harvey & GAG'M (the Global Anti-Golf Movement) from the WSJ article. If Rosty took the high ground, he might not be in the mess he's in.

Leaves, Limbs, Needles & Boughs

by Fred Opperman

My selection this month is a tree that is not hardy in the Chicagoland area overall. The tree is found just across the lake in Michigan and south 50 to 100 miles. It is one of my favorite trees for its excellent fall color and having three distinct leaf shapes.

This tree was America's first wonder drug. In 1622, the Virginia Company of England, the financial backer of America's first permanent settlement at Jamestown, required the colony to send 30 tons of sassafras root to England each year. It was believed to cure most any ailment and when used as a tea or tonic it became the favorite drink of England. Any settler who did not produce at least 100 pounds of sassafras root for export was fined by the company.

Sassafras albidum or Common Sassafras is usually a small to moderate size tree from 30 to 60 feet in height and with a spread of 25 to 45 feet.

Leaf: Alternate simple, blades of three different shapes, some are 3 lobed, some 2 lobed, and some have no lobes, Leaf color is bright to medium green in the summer, changing to shades of yellow, orange, scarlet and purple in the fall. One of the most colorful of any tree in the autumn.

Bark: Greenish-gray when young, becoming deeply furrowed and dark reddish-brown as it ages.

Buds: Ovoid, scarcely pointed at the tip, greenish, up to one fourth inch long.

Twigs: Slender, green, smooth, leaf scars alternate, small half round, usually with three bundle tracers. The bark of the twigs can be chewed for a refreshing taste. The roots are used to make sassafras tea.

Habitat: Roadsides, old fields and woods. Excellent for naturalizing in plantings and groups.
