Par Ex[®] introduces a family of mid-sized fertilizer grades designed to meet the needs of today's closely-mowed turf.

ONE WAY TO

IMPROVE YOUR

WELL EFFICIENCY

WHY MID-SIZE GRADES FOR CLOSELY-MOWED TURF?

BECAUSE fairway-sized particles are too large to apply to closely-mowed turf.

BECAUSE greens-sized products can be difficult to spread.

BECAUSE IBDU[®] is the most reliable, most consistent source of slow-release nitrogen.

For more information contact: Tom Skinner Specialty Products Territory Manager 319/524-8912

The normal operation of any water pumping system inevitably lead to less efficient well production due to pump war and well plugging.

At Layne-Western we have the resources and expertise to provide you with innovative solutions to keep your water pumping system operating at peak efficiency. Our complete repair and maintenance services help guard against costly breakdowns and quickly solve problems that arise.

Call the Layne professionals with over 100 years of experience in the water supply industry.

> "Where Meadow Goes, the Water Flows"

(1954 continued)

• A modern irrigation system consisted of snap valves in the center of fairways and sod cups on the greens. Most golf courses used hoses and roller bases.

• Sand traps were raked by hand

• Utility vehicles were non-existent. ("Cushman's" were motor scooters in those days). Golf course workers walked from location to location if a spare tractor was not available.

• Milorganite fertilizer was very popular on golf courses

• Tersan, Semisan, Caddy and Cal-Clor were popular fungicides

· Arsenate of lead was widely used

• West Point drum type aerifiers were used on tees and traffic areas.

• Greens were spiked, drilled or forked by hand. The Greensaire, which later became the Ryan Greensaire was just beginning to be developed

• Collars and tees were often mowed with two-wheel power units called overgreens

- · Lapping machines were scarce and hand cranks were common
- Bedknives were shimmed true rather than ground true.

Illinois Lawn Equipment has matured and grown during this forty-year span, and most certainly the turf industry has done the same. The average circa 1954 superintendent would have had trouble envisioning

- · Riding triplex mowers on greens
- · Self-contained hydraulically driven fairway mowers
- · Computerized irrigation systems
- · Aerifying on the scale now being practiced
- · Riding trap rakes
- Top dressing machines

• Hydraulically driven reels that can be reversed for back lapping

• Computerized reel grinders

and many would be shocked by the government's control of fungicides and herbicides, both in terms of availability and use, as well as the O.S.H.A. restrictions that are in effect today. Also, today's green speed and the use of a device called the Stimpmeter (unknown in 1954) would be shocking.

Professionalism, equipment refinement, research, and a lot of hard work have caused remarkable advances during this period of time.

Many thanks to Bob Johnson, Art Benson, Jr., Adolph Bertucci, Paul Voykin, Fred Opperman and Bob Williams for all their assistance in gathering the facts for this article. Might I say on their behalf as well as my own, the information stated in this article is as factual as our memories permit, so please allow for small inaccuracies. I wanted to use a lot of names and I did. I tried not to leave anyone out. I apologize to anyone who should have been mentioned and was not.

I would also like to thank Fred Opperman for the loan of his 1954 **Bull Sheet** file. There was so much information in there that I plan to do another article, entitled "*The 1954 Bull Sheets*". Last, but not least, on behalf of Illinois Lawn Equipment, I would like to express our appreciation to everyone for the loyality and support that made the last forty years possible.

Assistant Superintendent position is available at Mt. Prospect G.C., full time salaried, excellent benefit package. Contact Fred Behnke by mail at 411 S. Maple, Mt. Prospect, IL 60056.

Cannon Turf Supply has merged with the Shafer Group of Downers Grove. The Downers Grove office is open for business.

January 3-5, 1994 is the date of the Wisconsin Turfgrass & Green Industry Expo-94. It is being held at the Holiday Inn — Madison West, Madison, WI.

Sean Freeman moved to Twin Lakes G.C. as the assistant. Sean was one of the instructors at the recent CPR course. Congratulations.

George Ott at Hillcrest C.C. is looking for an assistant. Call George at 708/540-5146.

Congratulations to Dave Blomquist on his article "To Seed or Not to Seed" which was in the November/December 1993 USGA "Green Section". Isn't it great to see what is behind those bloodshot eyes from lack of sleep from chasing a puck up and down an ice rink.

Dennis Wilson, Sunset Ridge C.C., is looking for an assistant and a mechanic. Call Dennis at 708/446-5268.

.....

Okay guys, let's put on your thinking caps and start to put together an article for your newsletter. There aren't many articles so far for the "Ray Gerber Editorial Award" for 1994. Remember the judging period is from September through August. That means there are only 7 months left to write an article and four of those months are busy, busy, busy.

A couple of the Junior Colleges have some winter courses starting up. Harper College in Palatine, call 708/925-6857. Another is College of Lake County. Call Mark Zampardo, 708/223-6601, ext. 2320 for information on their courses.

.....

Nick Hongisto reports that all construction on his last 9 holes has been finished till spring. All of the mix has been placed on the greens, except for the putting green. All of the greens were covered to prevent the topmix from blowing away and weed seeds from blowing onto the greens. The Network 8000 satellites need to go in yet along with the wiring and programming. The course is committed to go continous cart paths on the 18 holes they are now playing. A Spring seeding will take place and Nick isn't to sure how he feels about that, haven't ever done that before.

Scott Thom of Hilldale C.C. is looking for an assistant. Call 708/884-6868.

John Knulty is looking for an assistant's position. B.S. Turfgrass, has worked at various golf courses as assistant. Phone: 815/459-4486, 958 Yorkshire Lane, Crystal Lake, IL 60014.

Wanted: Jacobsen Fairway & Blitzer mowers with or without frames. Also wanted Jac F-10 Tractor. Call Ron, 815/468-3438.

A USGA Green Section Regional Conference will be held:

Thursday, March 10, 1994 - 8:00 a.m. to 4:30 p.m. Meridian Hills Country Club Indianapolis, Indiana

Thursday, March 24, 1994 - 8:00 a.m. to 4:30 p.m. Best Western/SteepleGate Inn Davenport, Iowa

The program will include varied golf-related topics of interest to Superintendents, Course Officials, Golf Professionals, etc. For more information contact:

Flowering Shrubs Can Be Forced Indoors Now

by James Fizzell

This year, spring can come early to your home. How? Just snip some branches from your flowering shrubs and force them into bloom. By now many shrubs have flower buds that are formed and ready to bloom. There has been sufficient cold weather to break dormancy and all the buds require to burst open is warmth and moisture.

This procedure is quite simple. Anyone, even apartment dwellers, can succeed with this project. Start by selecting branches loaded with flower buds. You can identify the flower buds because they are more plump and more round than leaf buds. When cutting, select branches that have curves or bends that will create interesting blooming arrangements.

Don't worry about slanting cuts or shredded stems. Ordinary cuts work fine.

Submerge the branches overnight in a deep pail or tub of water, or wrap them in a damp cloth and put them in a plastic bag for a few days. This moistening and soaking loosens the bud scales and helps them to readily fall away as the flowers expand.

After moistening operation is completed, stand the branches in a pail of water in a place where you can control the temperature. Sixty to 70° is best for the developing flowers. Although the branches will force at higher temperatures, the color, size, and keeping quality of the blooms will be reduced. For this reason, it is also best to keep the branches out of direct sun.

Generally, plants that normally bloom early are easiest to force indoors. Also the closer to the natural bloom time you cut the branches, the faster they will open.

Try some things other than the old stand-bys of forsythia and pussy willow. Red maple has beautiful, red flowers. Catkins are flowers too, so try alder, birch, or hazel. Foliage of some trees is spectacular when forced indoors. Try horse chestnut, birch or oak.

Snow Time Safety

by Marty Baumann

So, the ground is frozen and all the real golfers are heading south to play for the winter. You have closed your gates and put your course to bed. Now you, your assistant and your mechanic must see if once more you all can survive those long winter months locked in your cold, tiny maintenance garage without killing each other.

Well, if you spend a few minutes right now planning ahead, the only injury in your garage this winter will probably not be an accident.

Before using the tools associated with winter maintenance like grinding, lifting, rebuilding, or painting, have your mechanic check them out to be sure they still comply with all original safety standards they came with.

Sit down with everybody in your shop who will be using the equipment and go over the operation and safety practices. It's also a good idea to use this time to check out some of the items you take for granted the rest of the year. Check out your furnace, portable heaters, hot water heaters, air compressor, hydraulic lift, and all your welding equipment.

Also, I would take the time to go over all the safety procedures with your reel and bedknife grinding.

Finally, while you are buried in your office doing your budget and your bids for next year, how about setting up your safety program. Pick a topic for each month to discuss over lunch with your men. Order some new safety signs for your shop. Set up a safety contest for your crew to start in the spring.

Keep in mind that your crew will only take safety as seriously as you do. If it's a priority in your mind and in your habits, you will have a crew that works safer, and will have safe working habits for a lifetime.

Your one-stop shop for all turf management needs. Ask about our complete line of chemicals, fertilizers and seed.

Willnur-Ellis...dedicated to quality, customer service and environmental stewardship.
