COMPOST

Compost provides essential micronutrients to make turf and ornamentals grow faster and healthier. Composts ability to retain moisture reduces drought shock. Its microbial content improves soil texture for better air and water circulation and reduced compaction. After fertilizer applications, compost retains added nutrients and makes them plant-available as needed — allowing reduced application rates.

- Divot repair mixes
- Top dressing high traffic areas — fairways , rough, practice areas
- Preparing beds for ornamental plants
- Preparing soil for new seed or sod
- Backfilling when transplanting
