

NEW HYDRAULIC ROTORS FROM RAIN BIRD

GLENDORA, CA — Rain Bird introduces the industry's first normally open diaphragm valve-in-head hydraulic rotor. This unique diaphragm valve-in-head feature permits the independent operation of rotors throughout the golf course and ensures individual head control for precise watering on greens, tees, and other specialized areas.

The 47DH and 51DH models have been engineered to stand up to the most demanding water quality conditions. The rotors feature a low pressure loss diaphragm valve, an energy efficient "straight-through" impact rotor drive, a self-flushing valve seat, and a long lasting, high strength plastic case.

The part circle 47DH and full circle 51DH rotors are designed for spacings of 51 to 80 feet. These hydraulic rotors are the ideal choice for multiple-row golf course applications. For complete information on the new hydraulic rotors, contact Rain Bird Sales, Inc., Golf Division, P.O. Box 37, Glendora, California, 91740.
