

## Jacobsen Greens King II.

Three levers, conveniently located on the console, allow the operator to select all three nine-blade reels together in any combination for mowing flexibility and smoother, finer cut. The delayed raise and lower action of the rear cutting unit allows for equal start and stop cutting at the same point on the green. The Greens King II can be equipped with vertical mowers as well as spiker units, adding to the versatility of the machine. Cutting units are free to pivot and follow the machine path for mowing accuracy and smoother finish. The operator has excellent line of sight for trimming and other close maneuvers.

Let us demonstrate this money saving unit on *your* greens.
