

Number Eight/Orange

Delaire Country Club

Delaire Country Club is a typical Joe Lee South Florida golf course. It offers a very fair round of golf for the recreational golfer.

Built on 250 acres in 1978 by the Palm Aire company, the 27-hole facility was sold to its 350 members about five years ago.

On a typical winter day, about 60 percent of the members will test the layout which features 18 ponds and 125 bunkers. Water comes into play on 11 holes. With 27 holes and 250 rounds on the busiest day and 50 in the summer, we don't need tee times.

Ray Hansen

The Orange, Brown and Blue nines measure 3405, 3366 and 3413 yards from the tips, respectively, all playing to par 36. Toughest test is the Orange/Brown combination, which is rated at 72.4 with a Slope of 125.

From the front tees, the courses measure 2657, 2608 and 2667 yards, with the Blue/Orange's 70.6 rating at Slope 119 offering the stiffest test to the ladies. That same combination is rated 65.4/114 for men.

About 200 of the 250 acres are irrigated and we maintain the entire property with a staff of 22, counting two assistants — one for the golf course and one for the grounds — two mechanics, a foreman/irrigation technician, a spray technician and an administrative assistant.

The six acres of greens are Tifdwarf and everything else, including the roughs, is Tifton 419 bermudagrass. We don't overseed. The fairways cover about 60 acres.

By far my favorite view on the golf course is number three on the Brown, a short par three over water with a fountain.

Hansen's crew also is responsible for the grounds

"I enjoyed the challenges of supervising 160 people with the responsibilities of a city manager, and the job helped me put both my kids through college. But the day after I wrote the last tuition check in January 1986, I resigned."

Hansen arrived in Florida on a Thursday, astonishing his friend and former Penn State classmate Tom Burrows, the former superintendent at the Turtle Creek Club in Tequesta and FGCSA president, now practicing agronomy full time. He had a job Tuesday morning.

"The hardest part of getting the job was convincing the people at Ocean Reef that I didn't need the challenges of running the whole show," recalls Hansen.

So instead of running the show, Hansen chose to run a series of projects in South Florida, notably the South Florida GCSA's Field Day and help in guiding the planning, funding and

construction of the state association's research green at the University of Florida's IFAS Research and Education Center in Fort Lauderdale.

"The Field Day pretty much runs itself now — Marie does most of it," says Hansen, referring to FGCSA Executive Secretary Marie Roberts, who serves the South Florida GCSA in the same capacity.

The day begins with an education session for continuing education credits, then features a two-hour trade show and buffet luncheon inside before moving outside for equipment demonstrations.

The precision of those demonstrations says a lot about Hansen's leadership. Each exhibitor is permitted three minutes with each piece of equipment.

"They can take less time than allotted, but not a second more," says Hansen, bull horn at the ready as he prepares to start the demonstrations.

Less than two hours later, they end. Right on schedule.

Perhaps it was two years as an Army clerk right after the Korean Conflict that gave Hansen the ability to organize projects.

"There's nothing to it, really," Hansen says. "You just count how many demonstrations you have, make out the schedule and stick to it. What's hard about that?"

Following his discharge from the Army in 1956, Hansen enrolled at Panzer College in Montclair, N.J. — now part of Montclair State College — where he spent two years preparing to be a physical education teacher.

Then he heard about the new turfgrass program for golf course superintendents at Penn State and Hansen decided to transfer. Having spent his high school summers maintaining a driving range and pitch-and-putt course in his native Fairlawn, N.J.,

We create dreams, not nightmares.

Golf courses that begin as drafting table dreams too often end as maintenance nightmares.

At Mike Young Designs, we prevent nightmares by designing and building courses based on solid agronomics, total site evaluation and years of practical turfgrass experience. We meet your needs by creating truly superb golf courses that are affordable, playable and manageable.

Mike Young Designs. Knowledgeable turfgrass professionals committed to outstanding golf course design, construction and renovation. Dedicated to creating dreams.

Hansen didn't take long to decide on a career change.

"I investigated the four-year program, but they told me to take the two-year program if I wanted to be a golf course superintendent.

"So I did."

He graduated in 1960 with an associate of science degree in turfgrass management, married a "townie" RN named Sandy, and took to the road selling golf course supplies for a company named Pierson's Mill. He became sales manager in 1963.

"I probably would have stayed in sales all my life, but in 1966 I got a call from Essex Country Club in West Orange, N.J., where I had spent my last summer internship as assistant superintendent under Alex Edgar, a Rutgers man."

Edgar had left to run his own golf course. Would Hansen like the job?

"It's probably the only golf course job I would have accepted at the time," he says.

Essex CC is a 36-hole equity facility but, when times got tough during the Depression, the club opened 18 holes to the public.

"I had the unique experience of running a private course and a daily fee course at the same time," Hansen said.

In 1970 Hansen was offered the post of general manager with the stipulation

that he retain responsibility for the golf course and that if he did not like "inside" work, he could step down with no hard feelings.

"I was a true general manager," Hansen said. "I hired the golf professional, the club manager and they did away with the greens committee and house committee and so on. I ran the club and reported directly to the executive committee.

"If somebody had a complaint, I was there to fix it.

"We kept the golf committee and the entertainment committee because I didn't care what kind of parties they had or what kind of games they played on the golf course. I stayed out of that end and they stayed out of management.

"That's the way it should be."

In 1974 Hansen left Essex to work for developer Logan Steele in the Pocono mountains. Together, they built the sister resort communities of Lake Naomi and Timber Trails, including an 18-hole golf course at the latter. Hansen was general manager of both communities.

"Of all the people at a golf course, I think the superintendent has the best background to be a general manager — if they make him a true general manager like I was," says Hansen, a 30-year member of the GCSAA and a 16-year member of the Club Managers Asso-

ciation of America. "I hired the other executives, I managed them and I was responsible for their actions to the executive committee or, in the Poconos, to the owner."

Hansen stayed in the Poconos until he wrote that last tuition check.

"I enjoy running a golf course," he says. "I hope to keep on doing this for the next 15 years if my health holds up."

He sees environmental protection and government regulation as the biggest challenges facing the profession.

"We are going to face even more changes in the next 10 years than we did the the past decade. That's scary.

"The environment needs to be protected," he says, "and perhaps a lot of people in our industry were too lax in that area, but the pendulum has swung too far.

"We really needed some of the attention we are getting to weed out the bad apples. The days of using mercuries are over and they should be.

"But to take Diazinon out of the hands of licensed pesticide applicators on a golf course and leave it in the hands of the homeowner makes no sense. *No sense at all!*

"All because of one person abusing it. That person should have been prosecuted and, at the very least, had his license taken away. But don't punish

the rest of us.

“Government regulation like that scares me.

“With rising budgets and regulatory compliance that gets more complex every day, superintendents are becoming managers. That’s really what we are now.

“When somebody asks me what I do for a living, I say I manage golf courses. If I said I ‘superintend’ them, they wouldn’t know what that meant.”

Hansen has three goals for his presidency. Typically, they are all clearly stated and two of them are easily quantifiable:

- Association Growth. “Right now about half of Florida’s superintendents are members. I don’t see how a superintendent can survive today without the continuous education provided by our association. A lot of the information isn’t available anywhere else.”
- Research Green. “We have the PhD’s who can do the research on pesticide and nitrate leaching and do the product testing and we gave them the facility. We need the information and we need it fast.”
- Pesticide Awareness. “Every superintendent should critically assess each

proposed use of any pesticide. All it takes is one mistake — as proven by Diazinon — and the product will be taken off the market.”

Hansen took office Aug. 4 at the FGCSA annual meeting in conjunction with the 14th annual Crowfoot Open at Grand Cypress Resort in Orlando sponsored by the Central Florida GCSA.

Highlights of the three-day weekend included an education session on the use of computers in golf course management, the annual awards banquet Sunday night, followed by Monday’s golf tournament.

Jerry Faubel, CGCS, president of the

FGCSA SPOTLIGHT

GCSAA, attended all three days.

Other officers installed at the annual meeting were Tom Benefield, CGCS, vice president, and Mark Jarrell, CGCS, secretary/treasurer. Benefield is superintendent at BallenIsles CC of JDM in Palm Beach Gardens and Jarrell at Palm Beach National GC in Lake Worth. Joel Jackson, CGCS, of Isleworth CC in Windermere, becomes immediate past president.

Presentation of the FGCSA's Distinguished Service Award to Kevin Downing, CGCS, manager of Willoughby GC in Stuart, topped the awards banquet. Also honored were four of the five inaugural recipients of the President's Award for lifetime achievement in golf course management: Bob Sanderson, CGCS, Del Tura CC, North Fort Myers; Carl McKinney, who retired from JDM CC in Palm Beach Gardens in 1988; Paul Turcotte, retired from the City of Miami and second president of the FGCSA; Adam

Jerry Faubel, CGCS, right, president of the GCSAA and John Foy, USGA Green Section regional director, put a laptop computer through its paces during the Crowfoot education seminar on computers.

Yurigan, who helped found the Central Florida GCSA and the Treasure Coast GCSA. Bud Quandt, Pasadena Y&CC in St. Petersburg, was presented the President's Award at a meeting of the Florida West Coast GCSA.

All award recipients will be profiled in upcoming issues of *The Florida Green*.

Fred Klauk's 73 won the golf tournament and a repeat spot on the Florida team in the national tournament scheduled early next year. Steve Wright's 67 took low net honors. Steve Wright, Dale Reash, Chuck Blankenship and Steve Sorrell led the Central Florida GCSA to the team title.

Introducing...

Enviro-Green

The Controlled Release Liquid Fertilizer

IT'S THE BEST FOR BOTH WORLDS!

From the Company that was the Innovator of "Fertigation" on golf courses, comes another Break Through. Now you can have the Confidence of using Controlled release Nitrogen and a unique soil retained potash with the convenience of liquid application. Our Custom blending system allows "ENVIRO-GREEN" to provide not only the Macros, but also the much needed Micros for complete plant nutrition. In addition, controlled release provides nutrition in the soil as the plant requires it. This minimizes leaching losses and run-off that may pollute the Environment.

So...maybe both of your WORLDS will be easier to live in now that there's ENVIRO-GREEN from LIQUID AG.

RESEARCH

REPORT

Research for the '90s

Superintendents will have to bring the university onto the golf course to get the data they need

BY DAN JONES, CGCS

Banyan Golf Club in the western part of Palm Beach County was carved out of natural pine forest by golf course architect Joe Lee. To lose those pine trees would be devastating to our classic course, so the issue of pine tree decline has haunted me for the past 10 years.

In an effort to save the thousands of slash pine trees at Banyan, we have tried many stopgap measures over the years, such as applying sulfur to the ground under the trees to reduce the pH of the soil. With all our efforts, we still lost to 25 to 50 pines a year.

A few years ago, I came across an article by David Wedge telling about the research being conducted by Dr. Roger Webb on pine tree decline at El Conquistador CC in Bradenton. Webb was reporting a success rate of 98 percent after 10 months.

I literally jumped off the couch. This could be the answer for Banyan.

I called Webb the very next day and explained our problem with the pines. I asked if he would inject our trees in return for help with his research. He needed more data from south Florida, so we signed up.

We will be cooperating in his work for the next few years. During the last 10 months of this experiment, we have lost only one pine tree from the group that was injected.

Welcome to research for the 90s.

We can no longer expect the universities to give us all the answers. We must bring the universities to our golf courses. We are now the laboratories. We are the technicians. We are the caretakers. We are the funders.

Federal dollars are no longer available for turfgrass research and Florida has reduced the dollars for research and technical positions. We must look out for ourselves and for our industry; we must fill in the gap. If we do not, golf course conditions which our members have come to expect cannot continue.

Let me share with you how Banyan GC is becoming a part of research for the 90s.

First we have a greens chairman who shares the vision for research, one who supports our efforts 100 percent. Second, we have management that strives for the best golf course possible within the budget. Third, management vision includes a commitment to enhance the environment as well as the golf course.

I heard of the breeding program Dr. Milt Engelke was conducting at Texas A&M on zoysiagrasses and heat-tolerant bentgrasses. Our greens chairman, Robert Jacobson, agreed that I should go to Texas and investigate Engelke's work. With the debate over the use of bentgrass in south Florida raging, he said we should be aware of developments on the cutting edge of research.

Want to get involved?

How can you get involved in research? It's easy. Researchers are always looking for people in the field who are willing to cooperate with their projects. Call Bob Yount at the Florida Turfgrass Association in Orlando at 407-898-6721. Contact the University of Florida in Gainesville at 904-392-7231 and speak to Dr. Ed Freeman. In Fort Lauderdale, you should contact Dr. Monica Elliott at 305-475-8990. If you are not sure how to get started, call the author at Banyan Golf Club, 407-793-0069 or drop by and see him.
