

## Nub wrench tailored to PVC couplings

Stamos Tool, Inc. of Boise, Idaho, now offers a full line of cast aluminum wrenches designed to fit all nub-style PVC compression couplings and most adapters.

The open-jaw design allows nub wrenching anywhere along the pipe without the need to slip the wrench over an open end. The push/pull leverage of the jaw prevents damage and distortion caused by common pipe and chain wrenches. Each Stamos PVC Nub Wrench fits at least two sizes of PVC fittings, features a rubber-coated handle, and comes with a money-back guarantee.

For more information call 208-377-0511; or write to Stamos Tool, 5469 Kendall St., Boise, Idaho, 83706.

The new nub wrench from Stamos

The E-Z Stake lock from Olson

## Spray heads staked in place

The E-Z Stake, new from Olson Irrigation Systems, is designed to provide a simple method of positioning spray heads when using swing pipe.

The E-Z Stake slips over and engages the teeth on an E-Z Ell, locking the stake in place. Designed for use with side- or bottom-mounted spray heads, the fitting can be staked vertically into the base of the trench or horizontally into the wall. The Olson E-Z Ell easily screws onto swing pipe for a simple and inexpensive way to connect a spray head to the pipe. For more information, call Kathleen Baldwin at 619-562-3100; or write Olson at 10910 Wheatlands Ave., Santee, Calif. 92071.

## Water-soluble fertilizer pellets

A soluble fertilizer pellet has been specially formulated for use with the Olson EH-12 Drip Irrigation System.

The pellets are designed for once-a-month use. Available in a 13-13-13 composition, the fertilizer has five percent humus with one percent humic acid. For application, simply unscrew the lid from the EH-12 head, place the fertilizer pellet inside the filter, screw the lid onto the EH-12, and proceed with the irrigation cycle.

For more information, call 619-562-2724.

## Jake's new 422

Jacobsen's all-new Greens King 422 walking greens mower is designed to deliver an exceptional cut, true tracking and easy servicing. A new 11-blade reel gives the 422 a tight cutting frequency, and the compact rollerbase allows it to follow undulations closely. A unique clutch is designed to transfer power smoothly to the traction roller. The 422's drive system has just three belts and the entire system is dry — eliminating the possibility of oil leaks on greens.

For more info, call 1-414-635-1251; or write Jacobsen Division of Textron, Inc., 1721 Packard Ave., Racine, Wis., 53403-2564.

CIRCLE #207

## Pennington's latest tall fescue blend

Pennington Seed, Inc. introduces Enviro-Blend, a semi-dwarf, turf-type, tall fescue blend, designed to produce lower growth, less clippings, superior drought survival, and excellent turf appearance.

Enviro-Blend was developed specially for areas with 15 to 45 inches annual rainfall. Once established, Enviro-Blend requires minimal watering. Normal rainfall should be sufficient to bring the grass up and establishment should take six weeks or less. Under drought conditions, it's designed to go into a dormant stage and remain there until rains come.

For more information, call 404-342-1234; or write to Pennington Seed, Inc., P.O. Box 290, Madison, Ga., 30650.

The new Renovator-20 from Lesco

## Lesco introduces multi-purpose seeder

New design features on Lesco's Renovator-20 — new upper handle design, heavy-duty cables and belt tensioner lever — make it more durable and easier to operate.

The Renovator-20 is really three machines in one: a seeder, slicer and dethatcher. The seed hopper holds about 35 pounds of seed which is metered precisely and

dropped before slicing. There are 40 hardened, high-carbon steel blades spaced two inches apart, designed to allow air, moisture and fertilizer to penetrate the turf/soil interface more easily. For more info, call 216-333-9250; or write to Lesco, Inc., 20005 Lake Road, Rocky River, Ohio, 44116.

## Software aids in design of drip irrigation

Software to help design drip irrigation systems is now available from Salco Products, Inc. The software is compatible with Macintosh or IBM computer systems. The designer is helped with all types of calculations needed to create an accurate drip irrigation system.

The package includes seven modules which cover the calculation of the number of emitters per plant, emitters required for even precipitation rate, limitations on length of pipe and numbers of emitters, pressure loss, and wetting patterns linked to type of emitter and type of soil.

For more information, call Salco at 310-873-2400; or write Salco Products, Inc., 4463 Rosecrans Blvd., Hawthorne, Calif., 90250.

## Wetting agent designed to reduce irrigation needs

Precision Laboratories, Inc. has introduced a new second generation wetting agent called Paragon, developed specifically for the turf, nursery and horticultural industries.

Because water conservation is of utmost importance, Paragon is designed to reduce irrigation needs by lowering the rate of evapotranspiration. A proprietary ingredient, found only in Paragon, is designed to set this product apart from first generation wetting agents.

Paragon has proven to be most effective in the spray tank when applying pesticides. It's available in two-and-a-half gallon containers and 55-gallon drums.

For more information, call 1-800-323-6280; or write Precision Laboratories, P.O. Box 127, Northbrook, Ill., 60065.

## Creating true greens

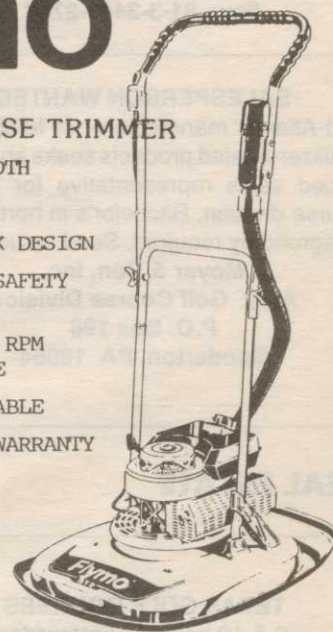

The new Auto-Truegreen from Sisis is designed to allow a higher cut while increasing pace, all with less stress on the turf. This ride-on unit has twin split rollers, one on each side of the machine, both driven by a hydraulic motor axle from an 8.5 hp vertical shaft engine. For more information on the Auto-Truegreen or other Sisis products, call 904-733-9715; or write Sisis at 4827 Phillips Hwy., Jacksonville, Fla., 32207.
