

Finding faulty underground power lines

Ditch Witch has introduced a Subsite Fault Finder system for locating faults in communication and power lines. The Fault Finder includes an A-Frame receiver and transmitter unit which detects leakage by measuring voltage differences in the ground.

The transmitter produces an initial 2,500-volt pulse to break down built-up corrosion on the cable. Typical normal voltage is 50 volts, permitting clean fault identification.

For more information, contact Ditch Witch c/o The Charles Machine Works, Inc., P.O. Box 66, Perry, Okla., 73077; or call 405-336-4402.

Low-pressure sprinkler heads from Toro

Toro's Irrigation Division has announced an addition to its new line of low-pressure, low-precipitation rate large turf sprinkler heads. The 730/750 Series is designed for slower absorbing soils and for operating under a wide range of pressures.

Developed in conjunction with landscape architects and irrigation consultants, the 730 and 750 sprinklers have a 3-inch pop-up to clear tall grasses, color-coded nozzles for easy identification during installation and a variable stator to maintain constant rotation speeds no matter which nozzle is installed.
