GCSAA shake-up: Schilling, Roberts resign

By PETER BLAIS

LAWRENCE, Kansas—Executive Director John Schilling has resigned and other top Golf Course Superintendent Association of America staffers and officials have left in the wake of a GCSAA organizational review.

Schilling offered his resignation in late August to pursue other business interests, he said. Director of Communications Robert Ochs and Director of Operations Diana Green have also left GCSAA. They, Schilling and others have formed St. Andrews

Corp., a Lawrence-based firm providing consulting, management and trade services.

Prior to Schilling's resignation, Immediate Past President Bill Roberts resigned from the board of directors as a result of its decision to adopt several major changes suggested in the \$24,000 Arthur Andersen Co. organizational review.

Schilling denied his decision was influenced by the Andersen study that recommended, among other things, the hiring of a chief financial

officer and deputy chief executive officer, moves some saw as undermining his authority.

"The Arthur Andersen study did not play into my decision to leave," the 41-year-old executive said. "Opening my own business has been a dream since I left college. My experience with the association has put me in a position to do just that."

Schilling's resignation is effective January, according to GCSAA President Randy Nichols of Cherokee Town

Acquisitions the aim of AGC spinoff

By PETER BLAIS

American Golf Corp. founder David Price's new company, National Golf Properties Inc., expects to spend \$64 million buying new golf courses over the next 18 months.

The purchase will be financed through NGP's recent stock offering, which is expected to eventually raise more than \$186 million. The company's initial portfolio includes 47 golf courses in 17 states — 23 daily-fee, 13 private and 11 resort operations. All have been and will continue to be managed by AGC.

NGP will focus on courses with strong cash flow growth potential and the possibility for long-term investment and capital appreciation, according to the company prospectus. Its founders believe many such facilities are avail-

'93 openings may reach one per day

By MARK LESLIE

Okay. Sit down. A near-record 350 to 365 golf courses are projected to open in the United States by year's end, according to the National Golf Foundation (NGF).

Disproving predictions that openings would tail off this year after two consecutive high-powered, high-production years, developers opened 219 golf courses

through Aug. 5. Another 244 are scheduled to open by Dec. 31 — the operative word being "scheduled."

"The historical average is 66 to 68 percent of those scheduled to open in a particular year actually do open that year," NGF Communications Director Bill Burbaum explained.

"For various reasons they get strung out and delayed. We have our biggest open-

ings in June, July, August,"

Using a 60-percent calculation, that translates to another 146 courses opening between Aug. 5 and Dec. 31, for the 365 total.

Catherine Suddarth, who tracks development for the NGF, said late-spring snows in the Northeast and heavy rains in the Southeast set back grow-in plans and could lower the number of

NCAMP head to address RISE annual meeting

By HAL PHILLIPS

MCLEAN, Va. — The phrase, "Know thine enemy," will take on newer, deeper meaning for those members of the chemical industry attending the RISE (Responsible Industry for a Sound Environment) Annual Meeting, scheduled for Sept. 10-12, at the Ritz Carlton here.

One of the primary speakers at this meeting of chemical formulators, manufacturers and distributors will be Jay Feldman, head of the National Coalition Against the Misuse of Pesticides.

"He is our primary opponent and cer-

tainly our most outspoken critic," said Allen James, RISE executive director. "But he has agreed to speak, give his views and answer questions. I've no doubt it will enlighten our members."

Also on the speaking schedule is Steve Johnson, director of field operations for the federal Environmental Protection Agency. While Johnson will offer insights into the goals and objectives of EPA, James already has a well-defined view of the agency under its new head, Carol Browner.
