NICKLAUS PICKS SORRELL

HILTON HEAD, S.C. — Steve Sorrell of Colleton River Plantation has been selected Superintendent of the Year by GolfTurf, a division of Golden Bear International. GolfTurf President Edward A. Etchells cited Sorrell for doing “an absolutely phenomenal job in completing the grow-in stage and developing the maintenance operations.” Sorrell joined Colleton River in 1993 after serving as superintendent at Grand Cypress Resort and Metro West Country Club in Orlando, Fla.

MINNESOTA CLEANUP IN FRONT

The Minnesota Pollution Control Agency's Leaking Underground Storage Tank Program leads other Midwest states in cleaning up tank leaks, according to figures released by the Environmental Protection Agency (EPA). The EPA reported that in Minnesota, more than 42 percent, or 1,837 of the 4,337 confirmed leaks had been cleaned up by the end of the 1993 fiscal year. That compares with 25 percent of the 50,000 known releases in all the EPA's Midwest states. Those figures do not include tanks with less than 1,100-gallon capacity.

OHIO LANDFILL DELAY

Lack of funding has forced Ohio to postpone its ban on dumping yard wastes in landfills. Expected to go into effect last Dec. 1, the ban has been delayed until as late as July. The Ohio Environmental Protection Agency said staff shortages prevented it from writing rules the state Legislature approved four years ago.

RESEARCH FUNDS RAISED

DENVER — A silent auction at the Rocky Mountain Turf Conference and Trade Show provided \$4,000 toward the Jackie Butler Memorial Endowment Fund. Money earned through the conference will be donated to the Rocky Mountain Turfgrass Research Foundation.

SCIENTIST-AUTHOR SPEAKING IN NAPLES

NAPLES, Fla. — Dr. Michael S. Coffman, author of two books and former professor of forest science at Michigan Technological University, will conduct a six-hour seminar on environmentalism on May 13 at Naples Beach Club. The president of Environmental Perspectives, Inc., in Bangor, Maine, Coffman will explain how to handle environmental extremism on the local level. To register, people should contact David Court, director of education for the Florida Golf Course Superintendents Association, at 407-482-5000.

Water-recycling, chemical-free, tackling difficult issues, Pheasant Run was...

Ahead of Its Time

ST. CHARLES, Ill. — Whether it was foresight or visionary, long before it was politically expedient — or even recommended — Pheasant Run Resort Golf Course was chemical-free and recycling its own water.

In the early 1960s, McArdle Enterprises President Ed McArdle stood on 160 acres of Illinois prairie 40 minutes west of Chicago and envisioned a resort and convention center where a dairy farm then stood.

When Pete Mirkes Jr. took his first supervisor's position with McArdle, in February 1963, he faced major challenges.

“From Day One, we knew we had a challenge in front of us,” Mirkes said. “The property literally was tree-less, and had no

Dr. Danneberger: 'Don't give up on IPM' too soon

By MARK LESLIE

ROCKPORT, Maine — Integrated pest management (IPM) plans are fun to discuss in the off-season, but oftentimes “come July, they're the first thing out the window when the spray tank starts up,” said Prof. Karl Danneberger.

Urging his Maine Turfgrass Conference audience to develop — and not abandon — IPMs at their facilities, Danneberger said: “If you're doing good practices ... they get better each year. If it is sound practice but doesn't work well the first year, don't throw it out the window.”

The concept of IPM is minimal disturbance, he said. “You will do as little, under optimum maintenance, as you can. That doesn't just mean reducing pesticides. Cultural practices can cause disturbances. Anyone who has dropped a height of cut on a green for a term knows that.”

The Ohio State University professor said the technical approach to IPM strategies involves cultural and biological practices, resistant cultivars and chemicals.

By using IPM, “you're hitting [application] rate with cultural practices, number with biological control, and resistance with chemical control,” he said.

“Most of our problems relate to resistance,” Danneberger said, explaining that the more a chemical is applied the faster pests develop resistance to it. “Fungicides are applied more often and that is why we experience more resistance with them,” he said.

Danneberger said superintendents should “quantify what you have on the course. If you have data you have knowledge. And if you have knowledge you have power.”

Having that data as a baseline makes it possible to gauge effectiveness of a maintenance program into the future.

“If you're doing good cultural practices you will see a lot

Walter Woods makes mark far beyond bounds of St. Andrews

Walter Woods is head superintendent at St. Andrews Links in Scotland, the holy Mecca of golf. Woods has been the links supervisor the past 20 years. He consults worldwide and is past chairman of the British and International Golf Greenkeepers Association. Contributing Editor Terry Buchen interviewed him during January's British Turfgrass Management Exhibition Seminar '94 in Harrogate, Yorkshire, England.

Golf Course News: How has the golf course changed over the past 20 years?

Walter Woods: We have had many [British Open] championships and that has improved us. To deal with the top players playing our courses I had to get more education. I did that by going to America. Your education system had a lot to offer and I was able to incorporate what I learned into the conditions we find here. I think we've improved St. Andrews because of what I learned in America combined with what we knew about British conditions.

GCN: Have British and Scottish courses evolved toward what we find on American courses?

Woods: I think they have. Despite the romantic things they say, I don't think golfers today would want to play courses with the conditions we had 20 years ago. We fertilize more than we used to. We're cutting fairways with triplexes rather than the gang mowers we used to use. During

In preparation for the 124th British Open Championship next year, St. Andrews is refurbishing its famed sod-wall bunkers — the Hell Bunker on the 14th hole, above, and Shell Bunker on the 7th, below — worn by the wind and golfers' sand blasts.

the Open, greens are cut two or three times a day because the pros demand putting conditions be faster.

Nowadays we would never succeed by closing our courses in winter. During the winter we expect people to play golf, use the gaming machines, buy food and drink. Therefore it's important we have a 12-month season. That's another reason education is so important.

GCN: Sundays are interesting at St. Andrews.

Woods: We've always closed Sundays. Many people have suggested we stay open to get the extra revenue. But Old Tom Morris said many years ago that if people don't need a day of rest the golf courses still do. We've always stuck by that. People are allowed to walk the golf course Sundays. You see couples and children and people with babies in their arms. It's more recreation. And then on Monday, it's back to golf again.

GCN: What time does your maintenance staff start work and golfers begin playing?

Woods: In Scotland we have long nights
