# NOW KILL ALGAE. WITHOUT KILLING YOUR BUDGET.

**INTRODUCING ALGAEN-X<sup>®</sup> ALGAECIDE.** It can give you algae control far superior to what you're getting now. And do it for a fraction of the cost of the chemical fungicides you've had to use, up to now. Unlike those chemical fungicides, Algaen-X was developed specifically to control algae. And does it ever!

Algaen-X is fast-acting, knocking down algae on contact. It's so powerful, you can control algae with very low application rates—just 1½ ounces per 1,000 square feet.

And all it costs to treat 1,000 square feet with Algaen-X is about 60¢. The cost-in-use of comparative chemical fungicides can be \$2.00 or more per 1,000 square feet!

You can get Algaen-X now in 2 x 2.5 gallon cases. Call your Scotts distributor today. Or call us toll-free at 1-800-492-8255.

New Algaen-X. It kills algae. Without killing your budget.

## Spring is the best time to prevent summer dry spot.

You've probably seen those irregular areas of turfgrass that show signs of drought stress. Localized Dry Spot (LDS)—with its characteristic wilting and turf death—usually shows up at the height of the golf season. But the best time to control the problem is in the spring.

LDS is characterized by an

irregular area of turfgrass that for no apparent reason begins to show signs of drought stress. The condition is most prevalent on sandy bentgrass greens, but it can also occur on fairways. Infrequent or reduced watering of golf greens increases the problem, but the symptoms may occur right after irrigation.

According to another Michigan State University study, it is now thought that these dry spots are the result of hydrophobic soil where a non-wettable organic coating of sand particles causes soil to repel water instead of absorbing it.

Once soil moisture levels decrease in hydrophobic

soils, rewetting the soil can become very difficult. The condition has been compared to normally absorbent peat shedding water when it is totally dry.

By applying wetting agents to the soil in the spring, you can increase the soil's ability to absorb and hold water—and prevent it from drying

out. Whether the summer is wet or dry, applying a wetting agent in the spring can promote better utilization of water.

For more information circle the number below, or call Kalo, Inc., toll-free: 1-800-255-5196.

CIRCLE #198

### "Staying power" is the key to early application of wetting agents.

Pre-season application of a wetting agent can only deliver benefits in mid-summer if the wetting agent has the residual activity to stay on the job. One product that has been very successful in early application is Hydro-Wet® RTA.

In one Michigan State University trial, soil moisture and turfgrass quality were measured 14 months after application of two leading wetting agents. The quality of the Hydro-Wet treated turf was significantly better and soil moisture was 23% greater.

Since this test, Kalo has developed New Hydro-Wet Advanced Formula RTA which makes it even more effective in improving soil infiltration.

For more information circle the number below, or call Kalo, Inc., toll-free: 1-800-255-5196.

CIRCLE #195

### Accurate application ensures optimum results.

Applying too little wetting agent can be as wasteful as applying too much. For best results, many golf course superintendents prefer using an advance metering system like the WaterWorks™ Injection System.

The WaterWorks Injection System is available in two models—Manual and Automatic proportional. Both make accurate, automatic applications of wetting agents as simple as a push of a button.

Using the Manual System requires setting the application meter to flow at a maximum of 2.5 gph to a fraction of that volume. Then, it automatically turns off and on at pre-set times. The pump features an anti-siphon valve to protect the wetting agent supply. It is all

American crafted using high-quality hardware for long life.

For even greater control, the Manual WaterWorks is upgradeable at any time to get the benefits of proportional automatic metering. By adding a flow sensor and scaling controller, the system senses and responds to changes in the water flow rate. So it starts when irrigation starts, stops when irrigation stops, and automatically adjusts with flow rate changes to ensure consistent ppm application at all times.

By combining the staying power of Hydro-Wet with the accuracy of WaterWorks, golf course superintendents have a labor-free method of applying Hydro-Wet.

For more information circle the number below, or call Kalo, Inc., toll-free: 1-800-255-5196.

CIRCLE #196

### Receive a FREE WaterWorks System with Hydro-Wet® Advanced Formula RTA.

Early application of a wetting agent makes more sense than ever. Because Kalo is offering special pre-season discounts on WaterWorks with every qualifying purchase of New Hydro-Wet Advanced Formula RTA.

For example, when you purchase 165 gallons of Hydro-Wet RTA, you can buy a WaterWorks Manual Injector system for 1/2 price. Or, buy 275 gallons and receive this high-quality WaterWorks System FREE—a value of nearly \$1,200!

Start improving the beauty of your course now. For details on this special offer, contact your Kalo distributor. If you don't know your distributor, or have immediate questions, call the number below.

## Maintaining Immaculate Turf is a Complex Assignment

- **Super TRIMEC®:** Unparalleled broadleaf control from cool-weather broadcast spraying or summer spot treatments of hardened-off weeds, including spurge, oxalis and ground ivy. One gallon covers 4 acres.
- **TRIMEC® Classic:** Unmatched efficiency for controlling broadleaves when they are actively growing in cool-season turf. One gallon covers 2½ acres.
- **TRIMEC® Plus:** The ultimate post-emergent herbicide for outstanding control of crabgrass and nutsedge plus all the broadleaves controlled by Trimec Classic. One gallon covers up to 1 acre.
- **TRIMEC® Southern:** Especially designed to control broadleaves in 2,4-D-sensitive southern grasses. One gallon covers 4 to 8 acres.
- **TRIMEC® 992:** The applicator's formula especially designed for tank mixing with liquid fertilizer or other combinations. One gallon covers 2.66 to 3.5 acres.
- **TRIMEC® Encore®:** A Trimec Complex that replaces 2,4-D with MCPA. One gallon covers 1.75 to 2.66 acres.
- **TRIMEC® Bentgrass Formula:** Especially designed for use on bentgrass. One gallon covers 2 to 2.66 acres.

# Weed Control in the Environmental Age:

As turf management has become more sophisticated and environmentally significant, it is absolutely essential for turf professionals to select a post-emergent herbicide that: Has a broad enough spectrum to control virtually all problem weeds; provides maximum safety to turf and adjacent trees and ornamentals; contains products that are environmentally sensitive; reduces overall expenses (chemical and labor) to an absolute minimum. **Read why only Trimec Turf Herbicides can help you solve all of these problems.**

Everett Mealman  
Chairman and Chief  
Executive Officer  
PBI/Gordon Corp.

**Broad Spectrum Control:** The synergistic power of combining 2,4-D, MCPP and dicamba in a complex is so dramatic it earned Trimec a patent. Customers have told us that they haven't yet found a broadleaf weed in their turf that a Trimec Complex couldn't control. Spray it right with Trimec and your reward is immaculate, weed-free turf.

**Maximum Safety:** The fact that over 40 million acres of turf have been treated with Trimec to date attests to its outstanding margin of safety to turfgrass as well as to adjacent trees and ornamentals.

**Minimum Active Ingredients:** A broadcast spray of Trimec Classic at maximum label strength releases about one-third ounce 2,4-D; one-sixth ounce of MCPP; and four-one-hundredths ounce of dicamba per 1,000 square feet.

**Reduced Expenses:** Labor is the primary expense in turf management. Call-backs are the budget busters. So today you absolutely must have a herbicide that does it right the first time. Dependability is without a doubt the most important aspect of an herbicide.

From the very first day that we introduced Trimec in America, it has been famous for dependability. Although other 3-way herbicides are available, only Trimec gives you the absolute optimum in synergistic performance time after time. Why? Because of the way we make Trimec Broadleaf Herbicides.

In a standard 3-way tank mix, the droplets are not always identical, so there can be discrepancies in control. In a Trimec complex, every droplet is identical, for weed control you can count on — time after time.

Color code: Red, 2,4-D; yellow, dicamba; blue, MCPP; amber, Complex acid. Note: Colors are for code only and do not indicate the color of the product they are intended to identify.

The schematic drawing above indicates that, in a formulator's tank-mix (left), the molecules of 2,4-D, MCPP, and dicamba do not combine to form a new molecule. Accordingly, each droplet will be different and control may vary from droplet to droplet.

In a Complex (right), the three acids are reacted together to form a salt. Every droplet is identical, and thus precisely optimizes the intended synergistic activity.

The differences between a tank-mix and a Complex become significant when the goal is aesthetic excellence.

## "WITH DACONIL 2787<sup>®</sup>, WE'VE HAD NO PROBLEM WITH LEAF SPOT."

*Dave Southard,  
Superintendent,  
Bellevue  
Country Club  
Syracuse, New York*

Spring comes late in central New York, and Dave Southard, course superintendent at the Bellevue Country Club in Syracuse, knows he can count on plenty of moisture and cool temperatures. "That means Leaf spot," Dave says. "Then we go right from Leaf spot to Dollar spot to Brown patch to Snow mold."

That's why, when the last snow melts in mid-April, Dave begins a season-long program of turf protection that centers on Daconil 2787<sup>®</sup> Flowable Fungicide from ISK Biotech Corporation.

### Fairways, tees and greens

"I don't think we have more Leaf spot problems than other courses, but we do seem to have a longer time during which you have to control it," Dave explains. "We spray fairways, tees, and greens about every two weeks for a six- or seven-week period."

Bellevue Country Club is an 18-hole Donald Ross course, built in 1916. Much of its character comes from the course's rolling, woody terrain. In fact, the trees create some moisture problems on greens, tees and fairways.

"We're trying to thin out the trees a little, but we're really overplanted," Dave admits. "Many parts of the course are slow to dry out in the morning. Early or late in the year, when the sun is low in the sky, there are parts of the course that really don't get any sun at all. The trees cut down on air circulation, too. And that increases disease pressure."

### "I always come back to Daconil."

You might say Daconil 2787 is the cornerstone of Dave's turf management program. While he sometimes uses other products, he always comes back to Daconil 2787 for dependable disease control, and to avoid resistance. As Dave puts it: "For 23 years, it's been one of the basic products I use. It's very cost-effective, and quite dependable."

Have you got a Daconil 2787 success story? Tell us about it. If we use your story in an ad, we'll donate \$100 to your favorite charity. Write Jackie Tengler, ISK Biotech Success Stories, 5885 Landerbrook Dr., Suite 215, Cleveland, OH 44124.

CIRCLE #157

# POWERFUL CONTROL, PERFECTLY PACKAGED.

For years, Fungo® has met your needs for effective control of key turf and ornamental diseases.

Now Fungo is in water soluble bags, responding to your demands for safety and ease of use.

And Fungo WSB is an ideal replacement for Benlate. Its active ingredient, Thiophanate-Methyl, is a direct substitute.

Thanks to its systemic action, a single application of

Fungo WSB provides up to 14 days of control of major turf and ornamental diseases, including Brown Patch, Summer Patch, Necrotic Ring Spot, Red Thread, Dollar Spot, Diplodia, and Anthracnose.

And Fungo WSB is very versatile. It's labeled for use on major turf varieties along with spray applications for

roses, shade trees and woody ornamentals. You can also use it as a drench on annuals and perennials.

Get Fungo WSB from your Scotts distributor today. Or call us toll-free at 1-800-492-8255.

Fungo in water soluble bags—the perfect package

for controlling disease.

A superior quality of cut makes the Greens King IV® the most popular greens mower in the world. With the lightest footprint in the industry, the Greens King has the best weight distribution over all three wheels to minimize compaction.

**Exclusive features are standard.**

Exclusive, fully floating, pivoting reels steer through turns without scuffing or marking on the clean-up pass. Individual reel control and power backlapping keep reels sharp with less work. The Jacobsen quality reel sets the standard for fine greens mowing. All this at a competitive price.

Large capacity grass catchers are easier to attach and remove. For maximum durability and economy, choose the 16½ hp diesel with power steering or choose the 16 hp gas engine.

**Greens King performance with the ultimate exclusive: Turf Groomer.®**

The only true greens conditioner, the Turf Groomer increases green speeds up to

25% without lowering height of cut, while helping produce truer, healthier greens.

**All-new GreenSentry™ helps you maintain a spotless reputation.**

Our new oil leak detector option — GreenSentry — helps prevent nasty little oil leaks from staining your reputation in a big way.

For picture perfect results every time, the King reigns supreme. To see for yourself, ask your Jacobsen distributor for a demonstration.
